Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Case Worker: Not reported  
Local Agency: SANTA CLARA COUNTY LOP  
RB Case Number: 14-766  
LOC Case Number: 07S1E05D08f  
File Location: Stored electronically as an E-file  
Potential Media Affect: Other Groundwater (uses other than drinking water)  
Potential Contaminants of Concern: Gasoline  
Site History: 2006 - In January, 12 soil borings (B-1 through B-12) were advanced 6 to 12 feet below the ground surface (ft bgs). These borings encountered backfill material in an area formally occupied by fuel USTs. No documentation was submitted regarding the historical USTs. Maximum concentrations of contaminants in soil detected were 0.095 parts per million (ppm) TPHg (B-12 at 9 ft bgs) and 55 ppm TPH as Diesel (TPHd) (B-7 at 5 ft bgs). Benzene and Methyl tert-Butyl Ether (MtBE) were not reported to be present above the laboratory reporting limits. Temporary wells were constructed in 9 of the 12 borings for the collection of grab groundwater samples. Maximum concentrations of contaminants detected were 2,000 parts per billion (ppb) TPHg (B-5), 180 ppb TPHd (B-9), 10 ppb Benzene (B-5), 4.8 ppb Ethylbenzene (B-12), 3.3 ppb Xylenes (B-5), and 1.2 ppb MtBE (B-9). In February, 3 soil borings (B-13 through B-15) were advanced to 17 ft bgs and completed as temporary monitoring wells. Only TPHg was reported in the soil samples at a maximum concentration of 42 ppm in boring B-14 at a depth of 13 ft bgs. Maximum concentrations of contaminants were reported for the sample collected in boring B-13 at 5,900 ppb TPHg, 32 ppb Benzene, 20, ppb Toluene, 41 ppb Ethylbenzene, and 12 ppb Xylenes. The maximum concentration of MtBE at 7.6 ppb was reported for boring B-15. In December, 6 monitoring wells (MW-1 through MW-6) were installed on-site to depths ranging between 22 and 23 ft bgs. Soil samples collected from the wells were reported to have maximum concentrations of 18 ppm TPHg, 47 ppm TPHd, and 120 ppm TPH in the motor oil range (TPHmo). Benzene, Toluene, Ethylbenzene and Xylenes were not reported to be present above the laboratory reporting limits. 2007 ? In May, 1 monitoring well (MW-7) was installed to 23 ft bgs. 4 soil samples were collected from this boring and none were reported to have detectable concentrations of the Constituents of Concern (COCs) above the laboratory reporting limits. This well was added to the quarterly groundwater monitoring program. In July, 6 vapor wells (VE-1 through VE-6) were installed near the former tank excavation to a depth of 12 ft bgs. 8 soil samples were collected from these wells and reported to have a maximum concentration of 430 ppm TPHg and 800 ppm TPHd in sample VE-5/12 collected in well VE-5 at 12 ft bgs. Benzene and MtBE were not reported to be present above the laboratory reporting limits. Perched groundwater was encountered in the vapor wells at depths between 8.5 to 11 ft bgs within a 1-foot thick layer of wet, poorly graded sand or clayey sand, which is underlain by clay. During installation of the groundwater monitoring wells, the boreholes were left open at this corresponding depth to see if groundwater was present. The perched groundwater was not encountered in the borings for any of the groundwater monitoring wells. In November, groundwater extraction began and continued through September. Groundwater was extracted from well MW4 and during excavation work and from a horizontal sump well (EW1) following excavation work. Approximately 634,074 gallons of groundwater were extracted, treated and discharged. 2008 ? In June, soil in the area of the former USTs was excavated and removed from the site. 11 soil samples were collected from 4-7 ft bgs along the sidewalls of the

excavation. This was above the saturated zone. Groundwater was noted to be entering the excavation at approximately 9 ft bgs. The soil samples were reported to only have low to non-detectable concentrations of TPHg and TPHd. Benzene and MtBE were not reported to be present above the laboratory reporting limits.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

**Hazardous Waste Summary:**

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D004  
Waste name: ARSENIC

Waste code: D007  
Waste name: CHROMIUM

Waste code: D008  
Waste name: LEAD

Waste code: F006  
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS)

 RB Case Number: 10-058  
 LOC Case Number: 06S1E30M02f  
 File Location: Stored electronically as an E-file  
 Potential Media Affect: Other Groundwater (uses other than drinking water)  
 Potential Contaminants of Concern: Gasoline  
 Site History: In 1985, a 500-gallon gasoline USt was removed from the site and reported 530 ppm TPHg in the soil. In 1994, 1 monitoring well (MW1) and 1 boring (B2) were advanced onsite. Maximum concentrations reported in soil were reported of 9,100 ppm TPHg, 61 ppm Benzene, 270 ppm Toluene, 94 ppm Ethylbenzene, and 540 ppm Xylenes. In 1995 - 2 wells (MW2 and MW3) were installed and were reported to have low to non-detectable concentrations of the Constituents of Concern (COCs). In 1997, 3 borings (EB9 through EB11) were advanced on and offsite. Additionally, wells MW1 and MW2 were destroyed. Grab groundwater samples were collected from the 2 offsite borings and were not reported to have concentrations of the COCs above the laboratory reporting limits. In 2001, 5 soil borings (B21, B23, B28, B29, and B32) were advanced on and offsite to depths of 21-27ft bgs. The highest concentrations of TPHg (1,100 ppm) were reported for the sample collected from boring B28 at 20 ft bgs. In 2004, an extraction well (EW1) was installed to 25.4 ft bgs within the former UST excavation in order to remove free product (FP) from the site. FP had been reported in well MW1 prior to it's destruction. In 2007, 2 borings were advanced offsite. Soil samples were reported to have low to non-detectable concentrations of COCs. Only grab groundwater samples from boring B33 was reported to have detecable concentrations with maximum concentrations of 170 ppb TPHg, 2.4 ppb Benzene, 1.6 ppb Toluene, 1.3 ppb Ethylbenzene, and 3 ppb Xylenes. A geophysical survey was proposed and additional offsite investigation to delineate the plume.

 POTW: Not reported  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Background Info: Facility size is approx 7.0 acres. Sites include a grease rack and inactive vehicle wash rack. A draft PA was completed in February 1999 and a final SI work plan was prepared in August 2000. The grease rack was constructed in the early 1950s and is no longer used. The Army considers the vehicle wash rack and oil water separator to be a compliance (RCRA) issue for funding purposes. The wash rack pad and oil water separator were removed on August 15, 2000. Shallow soil sampling was conducted around the grease rack in 1997. A UST (fuel tank) was closed by County in the early 1990s. Contaminants of concern are primarily grease oil, fuels and solvents. Ground water is relatively shallow, approx 60 ft below ground surface. Impacts to groundwater from grease rack are unknown, but will be determined by the August 2000 SI field work.

Potential Media Affected: Aquifer used for drinking water supply, Indoor Air, Soil, Soil Vapor, Under Investigation  
Potential Contaminants of Concern: \* Solvents  
General Comments: This site is immediately adjacent to the former Continental Can Facility (Cannery Park I&II). Groundwater and soil gas beneath this Site is contaminated with solvents, primarily tetrachloroethene and trichloroethene. The Site was first developed as commercial and residential by 1939. A cold storage facility associated with food canning operated during the 1950's, along with residences called "Cannery Cottages". A rail road spur existed south of these cottage.

Tri-Valley growers occupied the site in 1969 and manufactured paper carton and cans, and included a can warehouse and cold storage areas. From at least 1986 or 2000, food produce facilities, a metal foundry for art production, an auto repair facility, and a stone workshop operated at the site. Contamination beneath the site potentially originates from the adjacent Cannery Park I&II site. Delineation of the contamination will occur if necessary following the environmental investigation at the Cannery Park I&II site.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Background Info: In 1983 the Santa Clara County Jail had three transformers (located on the roof, in the basement and near a prisoner holding area) that leaked small quantities ("a teaspoonful to less than a coffee cupful") of polychlorinated biphenyl (PCB) contaminated oil. The contamination of the three spots ranged from 12 micrograms per sample to 6,600 micrograms per sample before cleanup.  
Comments Date: 09011983  
Comments: CERT and RA - A cleanup level of 100 micrograms per square foot  
Comments Date: 09011983  
Comments: was chosen for the wipe tests. After cleanup, the areas tested  
Comments Date: 09011983  
Comments: were between non-detect and 25 micrograms per square foot. The  
Comments Date: 09011983  
Comments: cleanup was completed by September 1, 1983 and was certified.

 Potential Contaminants of Concern: Trichloroethylene (TCE), Vinyl chloride  
 General Comments: The Site was agricultural land before 1960. An aluminum extrusion plant operated at the Site from 1960 to 1966, under several owners. FMC used the Site from 1966 through 1988 to manufacture commercial logging equipment and military ordnance. FMC purchased the Site in 1983, then sold the Site in 1987. The Site is currently owned by 495 East Brokaw Road, LLC, and leased by various tenants. FMC began environmental investigations at the Site in 1986 and identified high boilingpoint hydrocarbons and volatile organic compounds (VOCs) in

the Site soil and groundwater. Approximately 1,200 cubic yards of impacted soils were excavated from specific sumps and pits at the Site in 1987 and 1988. In 1988, FMC conducted further investigations of soil and groundwater that confirmed that VOC impacts were still present in shallow soil and groundwater. FMC reported these results to the State of California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB) in the Comprehensive Site Assessment Report - Soil and Ground-Water Conditions, FMC Corporation, 495 East Brokaw Road, San Jose, California in 1989 (EMCON, 1989). In February 1990, the RWQCB adopted Order No. 90-032, Site Cleanup Requirements for: FMC Corporation Ground Systems Division and 495 East Brokaw Associates for the Property Located at: 495 East Brokaw Road, San Jose, Santa Clara County (RWQCB, 1990) requiring completion of Site characterization. In response, FMC submitted an Additional Soil and Ground-Water Investigation Report, FMC Corporation, 495 East Brokaw Road, San Jose, California in April 1991 (EMCON, 1991a), and an Addendum to Additional Soil and Ground-Water Investigation Report, FMC Corporation, 495 East Brokaw Road, San Jose, California in June 1991 (EMCON, 1991b). Quarterly groundwater monitoring was conducted and reports were submitted in accordance with Order No. 90-032. Order No. 90-032 was amended by Order No. 92-053, Amending SCO 90-032, Site Cleanup Requirements for: FMC Corporation-Ground Systems Division and 495 East Brokaw Associates, 495 East Brokaw Road, San Jose, Santa Clara County (RWQCB, 1992). Order No. 00-092, Final Site Cleanup Requirements and Recession of Orders Nos. 90-032 and 92-053 for: FMC Corporation and 495 East Brokaw Road, LLC for the property located at 495 East Brokaw Road, San Jose, Santa Clara County (RWQCB, 2000) was adopted on August 16, 2000 and rescinded Orders No. 90-032 and 92-053. Site groundwater monitoring is now occurring in accordance with the revised Self-Monitoring Program (SMP) for the Site dated January 18, 2002 (RWQCB, 2002). The primary VOCs detected in shallow zone groundwater at the Site are trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), and vinyl chloride. The presence of cis-1,2- 1-3 DCE and vinyl chloride are attributable to reductive dehalogenation of TCE. The two areas primarily impacted at the Site are the northeast corner and the east side of the building in the vicinity of the storm sewer. The nature and extent of impacts are well defined and limited. Historical data indicate that VOC migration in groundwater is minimal. The A-level aquifer beneath the Site has not been impacted with VOCs. A pilot test was performed in 1999 to evaluate the effectiveness of Hydrogen Release Compound (HRC) to stimulate anaerobic biodegradation of VOCs in Site soil and groundwater. The Pilot Study Results Report and Full-Scale Implementation Workplan for In-Situ Bioremediation Using HRC Injection (Workplan) (HSI GeoTrans, 2000) presented the successful results of the pilot study and a work plan for full-scale implementation. As part of the pilot study four pilot wells were installed. Full-scale implementation of enhanced bioremediation began in May 2000. A total of 103 HRC points were drilled at the northeast corner of the property (and along the northern boundary) and approximately 13,300 pounds of HRC were injected into the subsurface during May 2000. Ninety additional injection points were dri

**FINDS:**

Registry ID: 110013847249

**Environmental Interest/Information System**

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

DHS will be issuing a RAO or entering into an enforceable agreement with the RPs. DHS has budgeted \$50,000 for oversight/monitoring of cleanup activities. DHS will recover 100 percent of its direct costs plus staff costs and overhead related to the project. The RPs will pay all costs associated with remedial investigations and cleanup activities.

Site Description: A solvent recycler has operated at this site since about 1972. Extensive contamination of soil, shallow ground water and potential deep aquifer contamination exist due to releases of spend solvents and other chemicals. This site was formerly known as Berryessa Road, San Jose.

Hazardous Waste Desc: Volatile organic compounds are the primary contaminants of concern. A

Threat To Public Health & Env: "petroleum channel" has been discovered on one corner of the property where offsite contamination has been discovered.  
Ground water contamination and its potential effect on drinking water supplies is the primary threat to public health. Approximately 22 wells are registered with Santa Clara Valley Water District within a one-half mile radius of the site. Three domestic wells are perforated in zones likely to be affected by onsite contamination. However, that aquifer has recently been demonstrated to be uncontaminated.

Site Activity Status: Remedial investigations and interim measures have been occurring at the site since 1983. The RP has prepared a "screening" FS and implemented a steam injection/vapor extraction pilot study for soil heavily contaminated with solvents. Low temperature thermal stripping pilot test apparatus and a ground water treatment system using air stripping, carbon filtration and biotreatment are being constructed. The plume of ground water contamination has been essentially contained and the extent of soil contamination delineated. After evaluation of pilot tests, a FS will be prepared and a RAP developed and implemented.

Case Type: Cleanup Program Site  
Case Worker: Not reported  
Local Agency: Not reported  
RB Case Number: 43S0118  
File Location: Regional Board  
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil  
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Acetone, \* \* CHLOROMETHANE, \* \* CIS-1,2-DICHLOROETHYLENE, Dioxin / Furans, Trichloroethylene (TCE), Vinyl chloride, Xylene  
General Comments: Clean Harbors currently owns and operates the waste-chemical storage, treatment, and recycling facility at the Site. The facility has been in operation since 1975 under several different owners including Solvent Services Company (now dissolved) and Safety-Kleen Corporation (currently in bankruptcy). Clean Harbors purchased the Site in 2002.  
Plume/Contaminant Description: Extremely high concentrations of VOCs (1,500,000 ppm) and 23,000 ppb of 1,4-dioxane in the groundwater,  
Soil Description: Extremely high concentrations of VOCs and 1,4-dioxane in the soil underneath the facility. The extent of soil and groundwater pollution has been fully defined. Cleanup actions taken at the Site include 1) removal of all underground storage tanks and associated soil, 2) operation of a steam injection and vapor extraction system, and 3) operation of a groundwater extraction system using wells and trenches.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United

MAP FINDINGS

**CLEAN HARBORS SAN JOSE LLC (Continued)**

**1000430269**

States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003  
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004

OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Waste code: F011  
Waste name: SPENT CYANIDE SOLUTIONS FROM SALT BATH POT CLEANING FROM METAL HEAT TREATING OPERATIONS.

Waste code: F012  
Waste name: QUENCHING WASTE WATER TREATMENT SLUDGES FROM METAL HEAT TREATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Waste code: F019  
Waste name: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Waste code: F024  
Waste name: PROCESS WASTES, INCLUDING BUT NOT LIMITED TO, DISTILLATION RESIDUES, HEAVY ENDS, TARS, AND REACTOR CLEAN-OUT WASTES, FROM THE PRODUCTION OF CERTAIN CHLORINATED ALIPHATIC HYDROCARBONS BY FREE RADICAL CATALYZED PROCESSES. THESE CHLORINATED ALIPHATIC HYDROCARBONS ARE THOSE HAVING CARBON CHAIN LENGTHS RANGING FROM ONE TO AND INCLUDING FIVE, WITH VARYING AMOUNTS AND POSITIONS OF CHLORINE SUBSTITUTION. (THIS LISTING DOES NOT INCLUDE WASTEWATERS, WASTEWATER TREATMENT SLUDGES, SPENT CATALYSTS, AND WASTES LISTED IN SECTION 261.31 OR SECTION 261.32).

Waste code: F027  
Waste name: DISCARDED UNUSED FORMULATIONS CONTAINING TRI-, TETRA-, OR PENTACHLOROPHENOL OR DISCARDED UNUSED FORMULATIONS CONTAINING COMPOUNDS DERIVED FROM THESE CHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE FORMULATIONS CONTAINING HEXACHLOROPHENE SYNTHESIZED FROM PREPURIFIED 2,4,5-TRICHLOROPHENOL AS THE SOLE COMPONENT).

Waste code: F032  
Waste name: WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT FORMULATIONS FROM WOOD PRESERVING PROCESSES GENERATED AT PLANTS THAT CURRENTLY USE OR HAVE PREVIOUSLY USED CHLOROPHENOLIC FORMULATIONS (EXCEPT POTENTIALLY CROSS-CONTAMINATED WASTES THAT HAVE HAD THE F032 WASTE CODE DELETED IN ACCORDANCE WITH SECTION 261.35 OF THIS CHAPTER AND WHERE THE GENERATOR DOES NOT RESUME OR INITIATE USE OF CHLOROPHENOLIC FORMULATIONS). THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL. (NOTE: THE LISTING OF WASTEWATERS THAT HAVE NOT COME INTO CONTACT WITH PROCESS CONTAMINANTS IS STAYED ADMINISTRATIVELY. THE LISTING FOR PLANTS THAT HAVE PREVIOUSLY USED CHLOROPHENOLIC FORMULATIONS IS ADMINISTRATIVELY STAYED WHENEVER THESE WASTES ARE COVERED BY THE F034 OR F035 LISTINGS. THESE STAYS WILL REMAIN IN EFFECT UNTIL FURTHER ADMINISTRATIVE ACTION IS TAKEN.)

Waste code: F034  
Waste name: WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT FORMULATIONS FROM WOOD PRESERVING PROCESS GENERATED AT PLANTS THAT USE CREOSOTE FORMULATIONS. THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL. (NOTE: THE LISTING OF WASTEWATERS THAT HAVE NOT COME INTO CONTACT WITH PROCESS CONTAMINANTS IS STAYED ADMINISTRATIVELY. THE STAY WILL REMAIN IN

EFFECT UNTIL FURTHER ADMINISTRATIVE ACTION IS TAKEN.)

Waste code: F035  
Waste name: WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT FORMULATIONS FROM WOOD PRESERVING PROCESS GENERATED AT PLANTS THAT USE INORGANIC PRESERVATIVES CONTAINING ARSENIC OR CHROMIUM. THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL (NOTE: THE LISTING OF WASTEWATERS THAT HAVE NOT COME INTO CONTACT WITH PROCESS CONTAMINANTS IS STAYED ADMINISTRATIVELY. THE STAY WILL REMAIN IN EFFECT UNTIL FURTHER ADMINISTRATIVE ACTION IS TAKEN.).

Waste code: F037  
Waste name: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE-ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN: OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORMWATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGE GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED FROM NON-CONTACT ONCE-THROUGH COOLING WATERS SEGREGATED FOR TREATMENT FROM OTHER PROCESS OR OILY COOLING WATERS, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS) AND K051 WASTES ARE NOT INCLUDED IN THIS LISTING.

Waste code: F038  
Waste name: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE-ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN: INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED FROM NON-CONTACT ONCE-THROUGH COOLING WATERS SEGREGATED FOR TREATMENT FROM OTHER PROCESS OR OILY COOLING WATERS, SLUDGES AND FLOATS GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES AND FLOATS GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS) AND F037, K048, AND K051 WASTES ARE NOT INCLUDED IN THIS LISTING.

Waste code: F039  
Waste name: LEACHATE (LIQUIDS THAT HAVE PERCOLATED THROUGH LAND DISPOSED WASTES) RESULTING FROM THE DISPOSAL OF MORE THAN ONE RESTRICTED WASTE CLASSIFIED AS HAZARDOUS UNDER SUBPART D OF THIS PART. (LEACHATE RESULTING FROM THE DISPOSAL OF ONE OR MORE OF THE FOLLOWING EPA HAZARDOUS WASTES AND NO OTHER HAZARDOUS WASTES RETAINS ITS EPA HAZARDOUS WASTES NUMBER(S): F020, F021, F022, F026, F027, AND/OR F028).

Waste name: VICINALS FROM THE PURIFICATION OF TOLUENEDIAMINE IN THE PRODUCTION OF TOLUENEDIAMINE VIA HYDROGENATION OF DINITROTOLUENE.

Waste code: K115  
Waste name: HEAVY ENDS FROM THE PURIFICATION OF TOLUENEDIAMINE IN THE PRODUCTION OF TOLUENEDIAMINE VIA HYDROGENATION OF DINITROTOLUENE.

Waste code: K116  
Waste name: ORGANIC CONDENSATE FROM THE SOLVENT RECOVERY COLUMN IN THE PRODUCTION OF TOLUENE DIISOCYANATE VIA PHOSGENATION OF TOLUENEDIAMINE.

Waste code: K117  
Waste name: WASTEWATER FROM THE REACTOR VENT GAS SCRUBBER IN THE PRODUCTION OF ETHYLENE DIBROMIDE VIA BROMINATION OF ETHENE.

Waste code: K118  
Waste name: SPENT ADSORBENT SOLIDS FROM PURIFICATION OF ETHYLENE DIBROMIDE IN THE PRODUCTION OF ETHYLENE DIBROMIDE VIA BROMINATION OF ETHENE.

Waste code: K123  
Waste name: PROCESS WASTEWATER (INCLUDING SUPERNATES, FILTRATES, AND WASHWATERS) FROM THE PRODUCTION OF ETHYLENEBISDITHIOCARBAMIC ACID AND ITS SALT.

Waste code: K124  
Waste name: REACTOR VENT SCRUBBER WATER FROM THE PRODUCTION OF ETHYLENEBISDITHIOCARBAMIC ACID AND ITS SALTS.

Waste code: K125  
Waste name: FILTRATION, EVAPORATION, AND CENTRIFUGATION SOLIDS FROM THE PRODUCTION OF ETHYLENEBISDITHIOCARBAMIC ACID AND ITS SALTS.

Waste code: K126  
Waste name: BAGHOUSE DUST AND FLOOR SWEEPINGS IN MILLING AND PACKAGING OPERATIONS FROM THE PRODUCTION OR FORMULATION OF ETHYLENEBISDITHIOCARBAMIC ACID AND ITS SALTS.

Waste code: K131  
Waste name: WASTEWATER FROM THE REACTOR AND SPENT SULFURIC ACID FROM THE ACID DRYER FROM THE PRODUCTION OF METHYL BROMIDE.

Waste code: K132  
Waste name: SPENT ABSORBENT AND WASTEWATER SEPARATOR SOLIDS FROM THE PRODUCTION OF METHYL BROMIDE.

Waste code: K136  
Waste name: STILL BOTTOMS FROM THE PURIFICATION OF ETHYLENE DIBROMIDE IN THE PRODUCTION OF ETHYLENE DIBROMIDE VIA BROMINATION OF ETHENE.

Waste code: K161  
Waste name: PURIFICATION SOLIDS (INCLUDING FILTRATION, EVAPORATION, AND CENTRIFUGATION SOLIDS), BAG HOUSE DUST A

Waste code: K169  
Waste name: Crude oil storage tank sediment from petroleum refining operations.

Waste code: K170  
Waste name: Clarified slurry oil storage tank sediment and/or in-line

Biennial Reports:

Last Biennial Reporting Year: 2007

Annual Waste Handled:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 51629063.1

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 43130007.7

Waste code: D003  
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Amount (Lbs): 41007266.1

Waste code: F037  
Waste name: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE-ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN: OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORMWATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGE GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED FROM NON-CONTACT ONCE-THROUGH COOLING WATERS SEGREGATED FOR TREATMENT FROM OTHER PROCESS OR OILY COOLING WATERS, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS) AND K051 WASTES ARE NOT INCLUDED IN THIS LISTING.

Amount (Lbs): 35800281.5

Waste code: F038  
Waste name: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE-ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN: INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED FROM NON-CONTACT ONCE-THROUGH COOLING WATERS SEGREGATED FOR TREATMENT FROM OTHER PROCESS OR OILY COOLING WATERS, SLUDGES AND FLOATS GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION

**Corrective Action Summary:**

Event date:	07/01/1984
Event:	CA074ME
Event date:	07/01/1984
Event:	CA049PA
Event date:	07/01/1984
Event:	CA Prioritization, Facility or area was assigned a medium corrective action priority.
Event date:	08/01/1985
Event:	CA049SI
Event date:	07/01/1986
Event:	Stabilization Measures Implemented, Primary measure is source removal and/or treatment (e.g., soil or waste excavation, in-situ soil treatment, off-site treatment).
Event date:	07/01/1986
Event:	Stabilization Measures Implemented, Groundwater extraction and treatment (e.g., to achieve groundwater containment, to achieve MCL).

Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 08/08/1994  
Event: CA Prioritization, Facility or area was assigned a high corrective action priority.

Event date: 08/08/1994  
Event: Stabilization Measures Evaluation, This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 09/22/1997  
Event: CA210WB

Event date: 12/28/2000  
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 12/28/2000  
Event: Migration of Contaminated Groundwater under Control, More information is needed to make a determination.

Event date: 09/16/2004  
Event: Migration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 06/29/2009	Source: EPA
Date Data Arrived at EDR: 07/31/2009	Telephone: N/A
Date Made Active in Reports: 09/21/2009	Last EDR Contact: 10/14/2009
Number of Days to Update: 52	Next Scheduled EDR Contact: 01/25/2010
	Data Release Frequency: Quarterly

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/29/2009	Source: EPA
Date Data Arrived at EDR: 07/31/2009	Telephone: N/A
Date Made Active in Reports: 09/21/2009	Last EDR Contact: 10/14/2009
Number of Days to Update: 52	Next Scheduled EDR Contact: 01/25/2010
	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

## ***Federal Delisted NPL site list***

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

## ***Federal CERCLIS list***

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 06/30/2009	Source: EPA
Date Data Arrived at EDR: 08/11/2009	Telephone: 703-412-9810
Date Made Active in Reports: 09/21/2009	Last EDR Contact: 09/30/2009
Number of Days to Update: 41	Next Scheduled EDR Contact: 01/11/2010
	Data Release Frequency: Quarterly

## ***Federal CERCLIS NFRAP site List***

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

	Data Release Frequency: Quarterly

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

## ***Federal RCRA generators list***

### **RCRA-LQG: RCRA - Large Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 11/12/2008

## **State- and tribal - equivalent CERCLIS**

### ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

### ***State and tribal voluntary cleanup sites***

#### INDIAN VCP R7: Voluntary Cleanup Priority Listing

A listing of voluntary cleanup priority sites located on Indian Land located in Region 7.

Date of Government Version: 03/20/2008	Source: EPA, Region 7
Date Data Arrived at EDR: 04/22/2008	Telephone: 913-551-7365
Date Made Active in Reports: 05/19/2008	Last EDR Contact: 04/20/2009
Number of Days to Update: 27	Next Scheduled EDR Contact: 07/20/2009
	Data Release Frequency: Varies

#### INDIAN VCP R1: Voluntary Cleanup Priority Listing

A listing of voluntary cleanup priority sites located on Indian Land located in Region 1.

Date of Government Version: 04/02/2008	Source: EPA, Region 1
Date Data Arrived at EDR: 04/22/2008	Telephone: 617-918-1102
Date Made Active in Reports: 05/19/2008	Last EDR Contact: 10/05/2009
Number of Days to Update: 27	Next Scheduled EDR Contact: 01/18/2010
	Data Release Frequency: Varies

#### VCP: Voluntary Cleanup Program Properties

Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

Date of Government Version: 08/27/2009	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 08/27/2009	Telephone: 916-323-3400
Date Made Active in Reports: 09/18/2009	Last EDR Contact: 08/27/2009
Number of Days to Update: 22	Next Scheduled EDR Contact: 11/23/2009
	Data Release Frequency: Quarterly

### **ADDITIONAL ENVIRONMENTAL RECORDS**

#### ***Local Brownfield lists***

US BROWNFIELDS: A Listing of Brownfields Sites

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 10/01/2008	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/14/2008	Telephone: 202-566-2777

## **Local Lists of Hazardous waste / Contaminated Sites**

**US CDL: Clandestine Drug Labs**

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 03/01/2009  
Date Data Arrived at EDR: 06/22/2009  
Date Made Active in Reports: 09/21/2009

Number of Days to Update: 6	Next Scheduled EDR Contact: 02/01/2010
	Data Release Frequency: Varies

### DEED: Deed Restriction Listing

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date Data Arrived at EDR: 09/22/2009	Telephone: 916-323-3400
Date Made Active in Reports: 10/13/2009	Last EDR Contact: 12/30/2009
Number of Days to Update: 21	Next Scheduled EDR Contact: 12/28/2009
	Data Release Frequency: Semi-Annually

## **Records of Emergency Release Reports**

### HMIRS: Hazardous Materials Information Reporting System

Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 07/16/2009	Source: U.S. Department of Transportation
Date Data Arrived at EDR: 07/16/2009	Telephone: 202-366-4555
Date Made Active in Reports: 09/21/2009	Last EDR Contact: 10/05/2009
Number of Days to Update: 67	Next Scheduled EDR Contact: 01/11/2010
	Data Release Frequency: Annually

### CHMIRS: California Hazardous Material Incident Report System

California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).

Date of Government Version: 12/31/2007	Source: Office of Emergency Services
Date Data Arrived at EDR: 05/09/2008	Telephone: 916-845-8400
Date Made Active in Reports: 06/20/2008	Last EDR Contact: 08/18/2009
Number of Days to Update: 42	Next Scheduled EDR Contact: 11/16/2009
	Data Release Frequency: Varies

### LDS: Land Disposal Sites Listing

The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units.

Date of Government Version: 09/05/2009	Source: State Water Quality Control Board
Date Data Arrived at EDR: 09/28/2009	Telephone: 866-480-1028
Date Made Active in Reports: 10/13/2009	Last EDR Contact: 09/28/2009
Number of Days to Update: 15	Next Scheduled EDR Contact: 01/04/2010
	Data Release Frequency: Quarterly

### MCS: Military Cleanup Sites Listing

The State Water Resources Control Board and nine Regional Water Quality Control Boards partner with the Department of Defense (DoD) through the Defense and State Memorandum of Agreement (DSMOA) to oversee the investigation and remediation of water quality issues at military facilities.

Date of Government Version: 09/05/2009	Source: State Water Resources Control Board
Date Data Arrived at EDR: 09/28/2009	Telephone: 866-480-1028
Date Made Active in Reports: 10/13/2009	Last EDR Contact: 09/28/2009
Number of Days to Update: 15	Next Scheduled EDR Contact: 01/04/2010
	Data Release Frequency: Quarterly

## **Other Ascertainable Records**

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 11/12/2008	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/18/2008	Telephone: (415) 495-8895
Date Made Active in Reports: 03/16/2009	Last EDR Contact: 10/07/2009
Number of Days to Update: 118	Next Scheduled EDR Contact: 01/18/2010
	Data Release Frequency: Varies

## DOT OPS: Incident and Accident Data

Department of Transportation, Office of Pipeline Safety Incident and Accident data.

Date of Government Version: 05/14/2008	Source: Department of Transportation, Office of Pipeline Safety
Date Data Arrived at EDR: 05/28/2008	Telephone: 202-366-4595
Date Made Active in Reports: 08/08/2008	Last EDR Contact: 08/27/2009
Number of Days to Update: 72	Next Scheduled EDR Contact: 11/23/2009
	Data Release Frequency: Varies

## DOD: Department of Defense Sites

This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

Date of Government Version: 12/31/2005	Source: USGS
Date Data Arrived at EDR: 11/10/2006	Telephone: 703-692-8801
Date Made Active in Reports: 01/11/2007	Last EDR Contact: 05/08/2009
Number of Days to Update: 62	Next Scheduled EDR Contact: 08/03/2009
	Data Release Frequency: Semi-Annually

## FUDS: Formerly Used Defense Sites

The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Date of Government Version: 12/31/2007	Source: U.S. Army Corps of Engineers
Date Data Arrived at EDR: 09/05/2008	Telephone: 202-528-4285
Date Made Active in Reports: 09/23/2008	Last EDR Contact: 09/30/2009
Number of Days to Update: 18	Next Scheduled EDR Contact: 12/28/2009
	Data Release Frequency: Varies

## CONSENT: Superfund (CERCLA) Consent Decrees

Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: 04/24/2009	Source: Department of Justice, Consent Decree Library
Date Data Arrived at EDR: 05/19/2009	Telephone: Varies
Date Made Active in Reports: 09/21/2009	Last EDR Contact: 10/06/2009
Number of Days to Update: 125	Next Scheduled EDR Contact: 01/18/2010
	Data Release Frequency: Varies

## ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 04/23/2009	Source: EPA
Date Data Arrived at EDR: 04/28/2009	Telephone: 703-416-0223
Date Made Active in Reports: 05/19/2009	Last EDR Contact: 09/22/2009
Number of Days to Update: 21	Next Scheduled EDR Contact: 12/28/2009
	Data Release Frequency: Annually

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 01/05/2009	Source: Department of Energy
Date Data Arrived at EDR: 05/07/2009	Telephone: 505-845-0011
Date Made Active in Reports: 05/08/2009	Last EDR Contact: 09/14/2009
Number of Days to Update: 1	Next Scheduled EDR Contact: 12/14/2009
	Data Release Frequency: Varies

## MINES: Mines Master Index File

Contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Date of Government Version: 05/28/2009	Source: Department of Labor, Mine Safety and Health Administration
Date Data Arrived at EDR: 06/23/2009	Telephone: 303-231-5959
Date Made Active in Reports: 09/21/2009	Last EDR Contact: 09/18/2009
Number of Days to Update: 90	Next Scheduled EDR Contact: 12/21/2009
	Data Release Frequency: Semi-Annually

## TRIS: Toxic Chemical Release Inventory System

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/2007	Source: EPA
Date Data Arrived at EDR: 04/09/2009	Telephone: 202-566-0250
Date Made Active in Reports: 06/17/2009	Last EDR Contact: 09/14/2009
Number of Days to Update: 69	Next Scheduled EDR Contact: 12/14/2009
	Data Release Frequency: Annually

## TSCA: Toxic Substances Control Act

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/2002	Source: EPA
Date Data Arrived at EDR: 04/14/2006	Telephone: 202-260-5521
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 10/07/2009
Number of Days to Update: 46	Next Scheduled EDR Contact: 01/11/2010
	Data Release Frequency: Every 4 Years

## FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/09/2009	Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Date Data Arrived at EDR: 04/16/2009	Telephone: 202-566-1667
Date Made Active in Reports: 05/11/2009	Last EDR Contact: 09/10/2009
Number of Days to Update: 25	Next Scheduled EDR Contact: 12/14/2009
	Data Release Frequency: Quarterly

## FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

A listing of FIFRA/TSCA Tracking System (FTTS) inspections and enforcements.

Date of Government Version: 04/09/2009	Source: EPA
Date Data Arrived at EDR: 04/16/2009	Telephone: 202-566-1667
Date Made Active in Reports: 05/11/2009	Last EDR Contact: 09/10/2009
Number of Days to Update: 25	Next Scheduled EDR Contact: 12/14/2009
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008
	Data Release Frequency: No Update Planned

## HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2008
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008
	Data Release Frequency: No Update Planned

## SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2007	Source: EPA
Date Data Arrived at EDR: 05/19/2009	Telephone: 202-564-4203
Date Made Active in Reports: 09/21/2009	Last EDR Contact: 09/29/2009
Number of Days to Update: 125	Next Scheduled EDR Contact: 01/11/2010
	Data Release Frequency: Annually

## ICIS: Integrated Compliance Information System

The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

Date of Government Version: 03/20/2009	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/20/2009	Telephone: 202-564-5088
Date Made Active in Reports: 05/05/2009	Last EDR Contact: 09/28/2009
Number of Days to Update: 46	Next Scheduled EDR Contact: 01/11/2010
	Data Release Frequency: Quarterly

## PADS: PCB Activity Database System

PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 05/27/2009	Source: EPA
Date Data Arrived at EDR: 08/05/2009	Telephone: 202-566-0500
Date Made Active in Reports: 09/29/2009	Last EDR Contact: 10/21/2009
Number of Days to Update: 55	Next Scheduled EDR Contact: 02/01/2010
	Data Release Frequency: Annually

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## MLTS: Material Licensing Tracking System

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 07/06/2009	Source: Nuclear Regulatory Commission
Date Data Arrived at EDR: 07/13/2009	Telephone: 301-415-7169
Date Made Active in Reports: 09/21/2009	Last EDR Contact: 09/21/2009
Number of Days to Update: 70	Next Scheduled EDR Contact: 12/28/2009
	Data Release Frequency: Quarterly

## RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 07/28/2009	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/28/2009	Telephone: 202-343-9775
Date Made Active in Reports: 09/21/2009	Last EDR Contact: 10/16/2009
Number of Days to Update: 55	Next Scheduled EDR Contact: 01/25/2010
	Data Release Frequency: Quarterly

## FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 07/23/2009	Source: EPA
Date Data Arrived at EDR: 07/28/2009	Telephone: (415) 947-8000
Date Made Active in Reports: 09/21/2009	Last EDR Contact: 09/18/2009
Number of Days to Update: 55	Next Scheduled EDR Contact: 12/28/2009
	Data Release Frequency: Quarterly

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104
Date Made Active in Reports: 08/07/1995	Last EDR Contact: 06/02/2008
Number of Days to Update: 35	Next Scheduled EDR Contact: 09/01/2008
	Data Release Frequency: No Update Planned

## BRS: Biennial Reporting System

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/2007	Source: EPA/NTIS
Date Data Arrived at EDR: 02/19/2009	Telephone: 800-424-9346
Date Made Active in Reports: 05/22/2009	Last EDR Contact: 09/09/2009
Number of Days to Update: 92	Next Scheduled EDR Contact: 12/07/2009
	Data Release Frequency: Biennially

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## CA BOND EXP. PLAN: Bond Expenditure Plan

Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

Date of Government Version: 01/01/1989  
Date Data Arrived at EDR: 07/27/1994  
Date Made Active in Reports: 08/02/1994  
Number of Days to Update: 6

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

## EDR PROPRIETARY RECORDS

### *EDR Proprietary Records*

#### Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

	Data Release Frequency: No Update Planned

#### EDR Historical Auto Stations: EDR Proprietary Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

## VENTURA COUNTY:

### Business Plan, Hazardous Waste Producers, and Operating Underground Tanks

The BWT list indicates by site address whether the Environmental Health Division has Business Plan (B), Waste Producer (W), and/or Underground Tank (T) information.

Date of Government Version: 08/28/2009  
Date Data Arrived at EDR: 09/08/2009  
Date Made Active in Reports: 09/18/2009  
Number of Days to Update: 10

Source: Ventura County Environmental Health Division  
Telephone: 805-654-2813  
Last EDR Contact: 09/04/2009  
Next Scheduled EDR Contact: 12/07/2009  
Data Release Frequency: Quarterly

### Inventory of Illegal Abandoned and Inactive Sites

Ventura County Inventory of Closed, Illegal Abandoned, and Inactive Sites.

Date of Government Version: 08/01/2009  
Date Data Arrived at EDR: 10/05/2009  
Date Made Active in Reports: 10/13/2009  
Number of Days to Update: 8

Source: Environmental Health Division

Data Release Frequency: Quarterly

## YOLO COUNTY:

### Underground Storage Tank Comprehensive Facility Report

Underground storage tank sites located in Yolo county.

Date of Government Version: 07/22/2009  
Date Data Arrived at EDR: 09/04/2009  
Date Made Active in Reports: 09/16/2009  
Number of Days to Update: 12

Source: Yolo County Department of Health  
Telephone: 530-666-8646  
Last EDR Contact: 10/13/2009  
Next Scheduled EDR Contact: 01/11/2010  
Data Release Frequency: Annually

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2007	Source: Department of Environmental Protection
Date Data Arrived at EDR: 08/26/2009	Telephone: 860-424-3375
Date Made Active in Reports: 09/11/2009	Last EDR Contact: 09/09/2009
Number of Days to Update: 16	Next Scheduled EDR Contact: 12/07/2009
	Data Release Frequency: Annually

### NJ MANIFEST: Manifest Information

Hazardous waste manifest information.

Date of Government Version: 12/31/2008	Source: Department of Environmental Protection
Date Data Arrived at EDR: 05/05/2009	Telephone: N/A
Date Made Active in Reports: 05/22/2009	Last EDR Contact: 10/20/2009
Number of Days to Update: 17	Next Scheduled EDR Contact: 02/01/2010

### PA MANIFEST: Manifest Information

Hazardous waste manifest information.

Date of Government Version: 12/31/2007	Source: Department of Environmental Protection
Date Data Arrived at EDR: 09/11/2008	Telephone: N/A
Date Made Active in Reports: 10/02/2008	Last EDR Contact: 09/08/2009
Number of Days to Update: 21	Next Scheduled EDR Contact: 12/07/2009
	Data Release Frequency: Annually

### RI MANIFEST: Manifest information

Hazardous waste manifest information

Date of Government Version: 06/01/2009	Source: Department of Environmental Management
Date Data Arrived at EDR: 06/12/2009	Telephone: 401-222-2797
Date Made Active in Reports: 06/29/2009	Last EDR Contact: 09/14/2009
Number of Days to Update: 17	Next Scheduled EDR Contact: 12/14/2009
	Data Release Frequency: Annually

### WI MANIFEST: Manifest Information

Hazardous waste manifest information.

Date of Government Version: 12/31/2008	Source: Department of Natural Resources
Date Data Arrived at EDR: 07/17/2009	Telephone: N/A
Date Made Active in Reports: 08/10/2009	Last EDR Contact: 09/24/2009
Number of Days to Update: 24	Next Scheduled EDR Contact: 01/04/2010
	Data Release Frequency: Annually

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

**Oil/Gas Pipelines:** This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

### Electric Power Transmission Line Data

Source: PennWell Corporation

Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

### Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

### Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

### Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

UTM Y (Meters): 4135730.0  
Elevation: 54 ft. above sea level

### USGS TOPOGRAPHIC MAP

Target Property Map: 37121-C8 SAN JOSE WEST, CA  
Most Recent Revision: 1980  
  
North Map: 37121-D8 MILPITAS, CA  
Most Recent Revision: 1980

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Target Property County</u>	<u>FEMA Flood Electronic Data</u>
SANTA CLARA, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 0603490019E

Additional Panels in search area: 0603490013E  
0603490014E  
0603370070F  
0603370235E  
0603490018D

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
SAN JOSE WEST	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile SE
Site Name:	MODERN MACHINE CO
Site EPA ID Number:	CAD982400467
Groundwater Flow Direction:	North-Northeast
Measured Depth to Water:	16 feet to 17 feet.
Hydraulic Connection:	The site is located in the pressure (confined) zone, although interconnection between the upper and lower aquifers has been demonstrated within a one mile radius of the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

\* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### ROCK STRATIGRAPHIC UNIT

Era: Cenozoic  
System: Quaternary  
Series: Quaternary  
Code: Q (*decoded above as Era, System & Series*)

#### GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

### OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

#### California Drinking Water Quality Database

Source: Department of Health Services

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

## OTHER STATE DATABASE INFORMATION

#### California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

### RADON

#### State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208

Radon Database for California

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

## **1. Introduction**

### **1.1. General**

This Geotechnical Baseline Report (GBR) presents a baseline summary of anticipated ground conditions for the proposed trenchless portions of the 60 Inch Brick Interceptor Phase VIA Project (Project) in San Jose, California as shown on Figure 1. The Owner of the Project is the City of San Jose. This GBR is intended to present the Design Team's interpretation of ground conditions as they pertain to the trenchless components of the Project for use by the Contractor and to establish baseline conditions with respect to the character and extent of soil types and groundwater in and around the proposed construction horizon of the trenchless components of the Project. Although alternative, valid judgments and interpretations are possible, this GBR provides a basis for resolving potential differing site conditions claims with respect to the occurrence of different soil types and groundwater conditions during project construction.

The interpretation of soil and groundwater conditions described in this GBR is based on interpretations of stratigraphy between widely spaced borings; extrapolation beyond borings; assessments of test boring data, field observations, and laboratory testing data; previous construction activities in the Project area; and certain assumptions regarding construction means and methods. The Bidder should expect variation in the interpreted contacts between individual strata and differences in the physical properties and behavior of various soil strata described in this GBR due to the relatively small amount of subsurface material sampled in the geotechnical investigation relative to that which will be encountered during construction.

The GBR is a Contract Document and should be read in conjunction with the Geotechnical Data Report (GDR) which is also a Contract Document. The order of precedence of these and other Contract Documents is given in the General Conditions of the Contract. In the event of a conflict between the GBR and GDR, the GBR takes precedence.

### **1.2. Related Items**

This GBR summarizes and references the factual results of geotechnical investigations as presented in the GDR prepared by AMEC Geomatrix, Inc. Additional subsurface information by others from previous, unrelated investigations is also presented where relevant data exists. It was noted that Boring 15 from the referenced Woodward-Clyde Investigation, Boring 18 from the referenced Parikh Consultants Report, and Boring 19 from the referenced San Jose Sanitary Sewer System plans were in the vicinity of the Project. This additional subsurface

information is for information only and is not a Contract Document. The following documents were utilized in the preparation of this GBR:

- AMEC Geomatrix, Inc., Geotechnical Data Report, 60-Inch Brick Interceptor Phase VIA Project, San Jose, California, Dated August 2010.
- AMEC Geomatrix, Inc., Supplement to the Draft Geotechnical Data Report, San Jose, California, Dated October 2010.
- AMEC Geomatrix, Inc., Geotechnical Memorandum for Design, 60-Inch Brick Interceptor Phase VIA Project, San Jose, California, Dated January 2013.
- AMEC Geomatrix, Inc., Phase I Environmental Assessment, 60-Inch Brick Interceptor Phase VIA Project, San Jose, California, Dated January 2010.

### **1.3. Contractor's Responsibility**

This document is intended to assist prospective bidders in evaluating requirements for excavating, shoring, dewatering, and trenchless construction necessary to accomplish the work; to assist the Contractor in planning the work and designing temporary facilities; and to assist the Design team and Construction Management (CM) team in reviewing and monitoring the Contractor's submittals and operations. The inclusion of this GBR in the Contract Documents does not relieve the Contractor of any responsibility of making his own interpretation of ground conditions and resultant ground behavior.

The ground behavior described in this GBR is based on certain assumptions regarding construction sequencing and the means and methods to be employed by the Contractor. Different ground behavior than described herein may occur depending on the means and methods, as well as workmanship, adopted by the Contractor. Means and methods, constructions techniques, and soil behaviors described herein are used solely as an aid in the description of the subsurface conditions. The means and methods of construction are the sole responsibility of the Contractor.

The Contractor shall conduct the work in a safe manner at all times. Maintaining safe working conditions at the site shall be the sole responsibility of the Contractor. The Owner and his representatives shall only be responsible for the health and safety of their respective employees. All of the Contractor's equipment utilized on the Project

shall be able to perform the work required in a safe manner and shall be appropriate for the Project conditions described herein.

## **2. Project Setting**

### **2.1. General**

The proposed tunnel is an undercrossing of the Bayshore Freeway. Maintained by Caltrans, the Bayshore Freeway is a part of Highway 101 connecting San Jose and San Francisco. An onramp to Highway 101 from North 4th Street and Matrix Boulevard exists at the southwestern end of the tunnel crossing.

The tunnel crossing under Highway 101 begins approximate at Station 0+50 and ends at approximately Station 4+50. The depth to the tunnel invert varies between approximately 17 ft and 25 ft. The ground surface elevation varies by approximately 7 ft along the tunnel alignment with Highway 101 elevated around the surrounding ground. The ground surface along the tunnel alignment is shown in Figure 2, Subsurface Profile.

### **2.2. Regional Geology**

The Project is located in the Santa Clara Valley directly south of the San Francisco Bay and is located within the Coast Range Physiographic Province of California. The Santa Clara Valley is a component of a structural trough that extends generally south from the San Francisco Bay through the Santa Clara Valley to the San Benito Valley. The Santa Clara Valley is bounded by the Santa Cruz Mountains to the West and the Diablo Range to the East.

Regional bedrock consists of complexly folded, faulted, sheared, and altered sedimentary, igneous, and metamorphic rock of the Jurassic-Cretaceous age Franciscan Complex. The top of bedrock in the vicinity of the tunnel is significantly below the tunnel horizon and will not be encountered during tunneling operations. The project area is underlain by Holocene alluvium composed of sediment eroded from the adjacent ranges. Alluvial fans within valley floor areas typically have high percentages of fines. Refer to Section 4.1 of the GDR for more information.

The City of San Jose is located within one of the world's most active seismic regions and sits atop the San Andreas fault system with the San Andreas, Hayward, and Calaveras fault zones in close proximity along with the Silver Creek and San Jose faults. Based on the USGS Quaternary Fault and Fold Database of the United States, no known active faults directly cross the proposed alignment; however, due to the region's high seismic risk and previous seismic history, the Project will most likely experience seismic loadings within its design life. Figure 3 presents the tunnel crossing in relation to nearby faults. Notable earthquakes that have occurred in the

region in the past include the Loma Prieta earthquake of 1989 and the San Francisco earthquake of 1906.

### **2.3. *Historic Land Use***

Historically, the Santa Clara Valley was primarily an agricultural region. Recently, the Santa Clara Valley has become urbanized with the current Project area consisting of mixed residential, industrial, and commercial buildings in the immediate vicinity. The Bayshore Highway has been in its current location since the late 1930s with minor alignment adjustments and capacity improvements in subsequent years.

### **2.4. *Groundwater***

The Santa Clara Valley contains various rivers and streams that drain into the San Francisco Bay. Two major waterways, the Guadalupe River and Coyote Creek, flow through San Jose and are located approximately 0.6 mi. west of Project and 1.2 mi. east of the Project, respectively.

Historical borings and the readings from the piezometers installed as part of the field exploration found groundwater along the alignment to be between 8 ft and 11 ft below ground surface (bgs). Regionally, groundwater flows towards the San Francisco Bay. Based on readings from the piezometers, groundwater in the vicinity of the tunnel crossing flows northwest. Groundwater levels in the region have been noted to fluctuate throughout the year and are most likely driven by precipitation, preferential flow paths through the alluvium, and other factors. Groundwater will tend to flow through hydraulically connected layers/lenses of coarse grained material in the alluvium rather than the fine grained material that makes up the majority of the alluvium.

### **2.5. *Environmental Conditions***

This report does not baseline the presence, absence, or concentration of hazardous materials. The reader should refer to the Phase I Environmental Assessment report for information regarding environmental conditions. It is noted that contamination could pose problems for confined space operations, disposal of muck, and disposal of water.

## **3. Subsurface Conditions and Ground Characterization**

### **3.1. *Geotechnical Investigation Summary***

Field investigations were performed by AMEC Geomatrix, Inc., between July and October of 2010. Exploration data from this investigation is presented in the GDR.

The subsurface investigation consisted of 10 borings along the proposed alignment (GMX-1 through GMX-10). Borings GMX-1, GMX-2, and GMX-10 were drilled in the vicinity of the Highway 101 crossing with GMX-10 located in the median of Highway 101. Borings GMX-1, GMX-2, and GMX-6 through GMX-9 were converted to standpipe piezometers. Two flat-plate dilatometer (DMT) soundings were also conducted in the vicinity of the Highway 101 crossing at approximately the same locations as GMX-1 and GMX-2.

Laboratory tests included dry density, moisture content, Atterberg limits, grain size distribution, unconfined compressive strength, unconsolidated-undrained triaxial strength, permeability, and corrosion potential. In addition, in-situ hydraulic testing was conducted using piezometers located at GMX-1, GMX-2, and GMX-9. This testing included water level drawdown due to constant and variable pumping rates.

Alluvium was encountered in all boreholes to the depths explored. Due to the urban development along the alignment, various depths of pavement and fill were encountered during the field exploration. Generally, the alignment's geology can be broken up into two geologic units: fill and alluvium.

### **3.2. Summary of Geotechnical Investigation at Tunnel Location**

Borings GMX-1, GMX-2, and GMX-10 were drilled in the vicinity of the Highway 101 crossing as described previously. As noted above, additional relevant data in the vicinity of the tunnel crossing was examined; however, the following discussion pertains only to borings GMX-1, GMX-2, and GMX-10 and their associated sampling and laboratory testing programs.

Pavement measuring 7.5-in. and 9-in. in thickness was encountered in GMX-2 and GMX-10, respectively. Pavement was not encountered in GMX-1. The pavement was underlain by 18-in. of aggregate base at GMX-2 and 8-in. of cement treated base at GMX-10.

Fill was encountered from the ground surface to a depth of 4 ft in Boring GMX-1 and was encountered below the cement treated base to a depth of 6 ft in Boring GMX-10. The fill was composed of loose to very dense sand and gravel with varying amounts of fines. Cobbles were encountered in the fill during the field investigation.

Alluvium was encountered in all borings underlying the fill or aggregate base to the depths explored. The alluvium can be divided into fine and coarse deposits. Fine alluvium was encountered in all borings and consisted of medium stiff to very stiff, low to high plasticity, clay to clay with sand with blow counts ranging from 4 blows per foot (bpf) to 30 bpf with intermittent organic content. Coarse alluvium was encountered in six borings and consisted of loose to dense sand with silt and gravel to sand with clay with blow counts ranging from 9 bpf to 33 bpf. Fine and coarse

deposits are typically interbedded and the transition between the two deposits is likely to be gradual and indistinct. Coarse deposits up to 10 ft thick were encountered during the field investigation.

### **3.3. Subsurface Conditions for Construction of Tunnel and Shafts**

As described previously in Section 3.1, the site's geology can be broken up into fill and alluvium with alluvium being further separated into coarse and fine deposits. The subsurface conditions for the portions of the trenchless crossing north of Old Bayshore Highway are fill to a depth of 5 ft bgs underlain by alluvium. The subsurface conditions for portions of the trenchless crossing to the south of Old Bayshore Highway are up to 3 ft of asphalt pavement and coarse aggregate base underlain by alluvium. Figure 2 depicts the geologic units in relation to the tunnel.

Fill will be encountered at the North Shaft location and will be composed of sandy gravel with clay to clay with sand to a depth of 5 ft bgs (approximate elevation 40). As a baseline, 10 cobbles up to 12-in. in diameter should be expected per cubic yard of excavated fill material at the North Shaft. Pavement underlain by fill and aggregate base will be encountered at the South Shaft location. Zero to five ft of fill may exist under the pavement. Alluvium underlies the fill or aggregate base and extends to depths below the anticipated bottom of excavation.

Fine alluvium in full face conditions will be encountered for the majority of the tunnel crossing. Mixed face conditions of fine and coarse alluvium will be common throughout the tunnel crossing. The following table presents baseline percentages for encountering full face fine alluvium, full face coarse alluvium, or mixed face conditions along the tunnel crossing.

Baseline Face Condition Along Tunnel Axis  
(percentage of linear feet along tunnel axis)

Percentage of Fine Alluvium at Face	Description of Face Condition	Percentage of Linear Feet Along Tunnel Axis
85% or more	Full Face Fine Alluvium	50%
50% - 85%	Mixed Face	25%
15% - 50%	Mixed Face	20%
15% or less	Full Face Coarse Alluvium	5%

The fine alluvium ranges from medium stiff to hard clay to clay with sand with medium to high plasticity. The coarse alluvium ranges from loose to dense sand with silt and gravel to sand with clay. The tables below present baseline index properties for the fine and coarse alluvium.

Baseline Index Properties for Fine Alluvium

	Blows/Foot	% Fines	Liquid Limit	Plasticity Index	Undrained Shear Strength (psf)	Dry Density (pcf)	Moisture Content (%)
Minimum	5	74	32	9	400	84	23
Maximum	43	99	60	31	2000	99	37
Average	17	87	50	24	1000	93	30
Number of Tests	35	4	3	3	8	20	22

Baseline Index Properties for Coarse Alluvium

	Blows/Foot	% Fines	Dry Density (pcf)	Moisture Content (%)
Minimum	12	11	102	20
Maximum	33	26	108	25
Average	19	19	104	23
Number of Tests	7	3	3	3

### 3.4. Groundwater

Groundwater levels recorded from previous, unrelated projects in the project vicinity indicate that groundwater is between 8 and 10 ft bgs. Borings GMX-1, GMX-2, and GMX-10 indicated that groundwater is between 8 and 13 ft bgs. As a baseline, groundwater will be encountered at 8 ft bgs.

## 4. Shaft and Tunnel Design and Construction

### 4.1. General

The proposed tunnel will be approximately 400 ft long with the depth below ground surface to the invert of the interceptor ranging from 17 ft to 25 ft, placing the tunnel under the groundwater table for the length of the alignment, as baselined in Section 3.4. Two shafts will be required for the crossing, designated the North and South Shafts, with the final grade for the proposed alignment sloping to the north. The invert of the interceptor at the North Shaft will be approximately 20 ft bgs (elevation shown on drawings) while the invert of the interceptor at the South Shaft will be approximately 17 ft bgs elevation shown on drawings).

The tunnel will cross underneath Highway 101. The North Shaft will be located in the vicinity of the intersection of Old Bayshore Highway and Zanker Road. Portions of the South Shaft will be located within the North 4th Street right-of-way.

## **4.2. Soil Behavior**

The ground behavior classifications presented in the following sections are applicable to excavations for the shafts and tunnel. The following ground characterizations are for ground behavior upon exposure only and are not indicative of difficulty of excavation.

The Tunnelman's Ground Classification System for Soil, appended as Table 1, is used to describe ground behavior of the soil. This system relates the behavior of soil in response to underground construction operations in representative soil types. The system was developed based on tunnel construction methods employed when the system was created in the 1950s by Terzaghi and later revised by Heuer in 1974. This terminology is common vernacular to the tunneling and trenchless industry to describe anticipated ground behavior.

### **4.2.1. Shafts**

The North Shaft will be constructed through fill and alluvium while the South Shaft will encounter pavement, potentially some fill, aggregate base, and alluvium. Both shafts will encounter alluvium above and below the groundwater table.

The aggregate underlying the pavement at the South Shaft is anticipated to behave as cohesive-running to running ground. However, because of the shallow depth and thickness of the aggregate layer, the aggregate is not expected to pose a problem to construction.

The fill material located at the both shafts, as described in Section 3.3, is anticipated to generally behave as cohesive-running ground with some zones of fast to slow raveling ground, depending on the fines content of the material.

The alluvium material, as described in Section 3.3, underlies the fill or aggregate material and will extend to the bottom of the excavation. The alluvium will be encountered above and below the groundwater table. Above the groundwater table, the alluvium is expected to behave as slow raveling ground with some instances of fast raveling to cohesive running ground where coarse grained layers/lenses occur. Below the groundwater table, the alluvium is expected to behave as fast raveling ground to flowing ground where coarse grained layers/lenses occur.

### **4.2.2. Tunnel**

The tunnel will be constructed entirely within alluvium below the groundwater table.

Mixed to full face conditions of fine and coarse alluvium, as described in Section 3.3, are expected throughout the tunnel crossing with the majority of the tunnel crossing having fine alluvium in a full face condition. Fine alluvium is expected to behave as slow raveling ground. Coarse alluvium is expected to behave as flowing ground. As a baseline, fine alluvium will make up 70% of the total excavated volume and coarse alluvium will make up 30% of the total excavated volume.

### **4.3. Design and Construction Considerations**

#### **4.3.1. Shaft Layout**

Design and construction of the shafts is the responsibility of the Contractor. The shafts will be on the order of 30 ft deep with groundwater at 8 ft deep. The shafts will require support designed by a licensed professional engineer to resist loads imposed by the soils and groundwater as shown in the Contract Documents such that movements of existing utilities are kept within specified tolerances. Due to the relatively shallow depth to groundwater, the shaft design should take into account the impact of hydrostatic pressure on the shaft support system or the shaft construction method should be one which includes control of the groundwater through dewatering.

Some applicable types of support for the shafts include soldier beams with lagging, sheet piles, or a slide rail system. All three of these support systems may require varying amounts of dewatering during construction and operation. A concrete mud mat will be necessary to create a firm, workable shaft floor for both shafts and a structural concrete floor able to withstand the uplift pressures from the soil and groundwater at the bottom of the excavation should be considered with the design taking into account any dewatering or construction related effects on these pressures.

The location of the South Shaft will place it within the right-of-way of North 4th Street. Therefore, consideration must be made to minimize the impact of the shaft construction and operation on the travelling public. Direction of the tunnel drive, production schedule, laydown area, and other factors should be taken into account when deciding the size and location of the South Shaft.

#### **4.3.2. Tunnel Layout**

The Contractor must consider the groundwater conditions that will be encountered during tunnel construction and installation of initial support.

The pipe canopy shown in the Contract Documents must be installed prior to tunneling. The installation method of the pipe canopy shall be in compliance with the Specifications. The pipe canopy must be continuous for the length of the tunnel drive and outside of the tunnel horizon as specified in the Contract Documents. The

purpose of the pipe canopy is to limit settlement. Applicable installation methods include horizontal directional drilling and pilot tube methods.

Design and construction of the initial support system is the responsibility of the Contractor. The initial support system shall be a jacked pipe compatible with the chosen tunneling/trenchless method and designed by a licensed professional engineer. The jacked pipe can be either a casing pipe or the final carrier pipe.

The design of the initial support system should be adequate to resist the imposed soil and traffic loads such that movement of existing utilities and settlement of the roadway is within specified tolerances. This should include an analysis of its applicability to the support of coarse alluvium below the groundwater table. Design of the initial support system should consider the interaction between the soil and support system. The chosen initial support system and tunneling/trenchless method should consider groundwater infiltration and methods for controlling groundwater infiltration, if necessary. Vertical dewatering along the tunnel drive will not be possible.

Applicable initial support systems will depend on the tunneling/trenchless method chosen. The initial support systems suitable for the tunnel include jacked casing pipe and direct jacked carrier pipe. Contact grouting behind the initial support system or direct jacked carrier pipe is required.

Of paramount importance is controlling settlement of the roadway. The design of the initial support system must limit the settlement of the roadway to the specified tolerances. In addition, construction monitoring as discussed in Section 4.5 will be required to assure that the initial support system is performing as designed.

#### **4.4. Groundwater Infiltration**

Groundwater is located as shown on Figure 2 at the tunnel crossing with water flowing towards the North Shaft. In-situ aquifer tests were conducted during the field investigation and indicated hydraulic conductivities in the alluvium of between  $1.0 \times 10^{-5}$  centimeters per second (cm/s) and  $2.7 \times 10^{-5}$  cm/s. For baseline purposes, the hydraulic conductivity of the alluvium shall be taken as  $1.0 \times 10^{-5}$ . This hydraulic conductivity represents the alluvium as a whole and includes the effects of preferential flowpaths through the alluvium. Higher and lower hydraulic conductivities will be encountered locally depending on the percentage of coarse alluvium present in the soil with higher percentages corresponding to higher hydraulic conductivities. Water will preferentially flow through the coarse alluvium.

##### **4.4.1. Shafts**

Groundwater is anticipated to only be encountered in fine alluvium at the shaft locations and groundwater infiltration is anticipated to be less than 25 gallons per

minute (gpm) for the fully excavated shaft, assuming no active dewatering is taking place. Pockets of coarse alluvium encountered during excavation will yield large flush flows when encountered but should be assumed to not be hydraulically connected to other coarse alluvium layers/lenses.

As a baseline, flush flows of 50 gpm for 4 hours will occur once per shaft.

#### **4.4.2. Tunnel**

Groundwater infiltration for the tunnel will depend on the ground conditions encountered. For fine alluvium, groundwater inflows are anticipated as being 1 gpm or less per foot of tunnel with no significant flush flows. For coarse alluvium, groundwater inflows will depend on the size of the coarse alluvium layer/lens, whether ground modification has taken place, and whether the layer/lens is hydraulically connected to other layers/lenses. Coarse alluvium layers/lenses should be assumed to not be directly hydraulically connected to a recharge source. The Contract Documents require the chosen tunneling method to be able to control face stability and, therefore, water infiltration at the face, as in the case of an earth pressure balance machine (EPBM) or microtunnel boring machine (MTBM).

As a baseline, the tunnel crossing will encounter two in-situ coarse alluvium layers/lenses that will yield flush flows of 200 gpm for 4 hours if ground modification or some method of face control is not utilized. A closed face TBM is specified to help control or eliminate these flush flows.

When encountered, coarse alluvium layers/lenses should be expected to immediately flow if not controlled at the face.

#### **4.5. Construction Monitoring**

Construction monitoring will consist of monitoring points as shown in the Contract Documents. These monitoring points consist of utility monitoring points, surface settlement monitoring points, mid-depth settlement monitoring points, and deep settlement monitoring points. The Contractor is responsible for construction monitoring and should perform the monitoring in accordance with the Contract Documents.

Additional construction monitoring should include evaluation of the amount of material being excavated, the amount of grout used for contact grouting, and the amount and location of bentonite injections. Monitoring wells should be constructed to monitor the effectiveness of dewatering where dewatering is taking place.

## **5. Trenchless Technology Construction Methods**

### **5.1. General**

The relatively low cover for the tunnel crossing along with the subsurface conditions presents challenges for tunneling/trenchless methods. The majority of the tunnel is expected to be constructed in fine alluvium; however, portions of the tunnel will encounter coarse alluvium. As discussed earlier, the coarse alluvium will behave as flowing ground. Flowing ground combined with the tunnel crossing's low cover has the potential for large surface settlement, which must be mitigated with appropriate tunnel excavation and support methods.

Multiple tunneling/trenchless construction methods were considered for the tunnel crossing. Per the Contract Documents, only closed-face Tunnel Boring Machine (TBM) methods are allowed. The discussion that follows explains the reasoning behind the construction methods allowed in the Contract Documents. The choice of tunneling/trenchless construction method is the responsibility of the Contractor within the requirements of the Contract Documents.

### **5.2. Tunnel Boring Machines**

#### **5.2.1. General**

The TBM shall be an Earth Pressure Balance Machine (EPBM) or MicroTunnel Boring Machine (MTBM)

#### **5.2.2. Earth Pressure Balance Machine**

EPBMs maintain positive face control through the use of chemical additives to the soil cuttings and a controlled muck removal rate. EPBMs have difficulty maintaining face stability when overburden or water pressures become too high. Due to the relatively shallow depth of the tunnel crossing, this is not anticipated to be an issue on this project.

A drawback of EPBMs is that they generally have lead times associated with building a new machine or retrofitting an existing machine for each job. In addition, EPBMs generally do not allow access to the face of the excavation which could potentially lead to a stuck machine if large obstructions are encountered that cannot be digested by the machine.

Due to the relatively low cover and stringent constraints on settlement of the roadway, an EPBM is the only feasible construction method for the tunnel crossing.

The face of the excavation can be supported through the use of chemical additives which will control flowing ground and groundwater. The cutterheads can be designed for both coarse and fine alluvium.

Initial support systems shall be accordance with specifications and section 4.3.2 above.

### ***5.2.3. Microtunnel Machine***

MTBMs shall balances soil and ground water pressures by use of slurry or earth pressure balance system. Additionally the MTBM shall be capable of making adjustments required to maintain face stability for particular soil condition; and shall monitor and continuously balance soil and groundwater pressure to prevent loss of slurry or uncontrolled soil and ground water inflow.

A drawback of an MTBM is that the operator is at the ground surface and must view ground conditions via a monitor. Additionally, a separation plan is needed at the ground surface to separate the slurry from the excavated material. The excavated material may need to be dried out or otherwise treated on site prior to transporting away from the site.

Initial support systems shall be accordance with specifications and section 4.3.2 above.

## **6. Limitations**

This report has been prepared for specific application to the 60 Inch Brick Interceptor Phase VIA Project in San Jose, California per agreement between Brierley Associates, LLC and AECOM. This report is based on our understanding of the Project elements and geometry at this time and in accordance with generally accepted engineering practices common to the local area.

The tunnel under Highway 101 connects with other portions of the Project not being constructed via trenchless methods. This GBR is only applicable to the tunnel under Highway 101 as described herein and includes construction of tunnels and associated shafts. This GBR is not applicable or binding to portions of the Project being constructed via open cut or other non-trenchless methods. This GBR is not intended to specify ground conditions or ground behavior. The baselines presented in this GBR are not warranties.

In the event that changes in the nature, design, or location of the planned construction are made, the conclusions and recommendations contained in this report should not be considered valid unless the changes are reviewed by Brierley Associates, LLC and the conclusions of this report are modified or verified in writing.

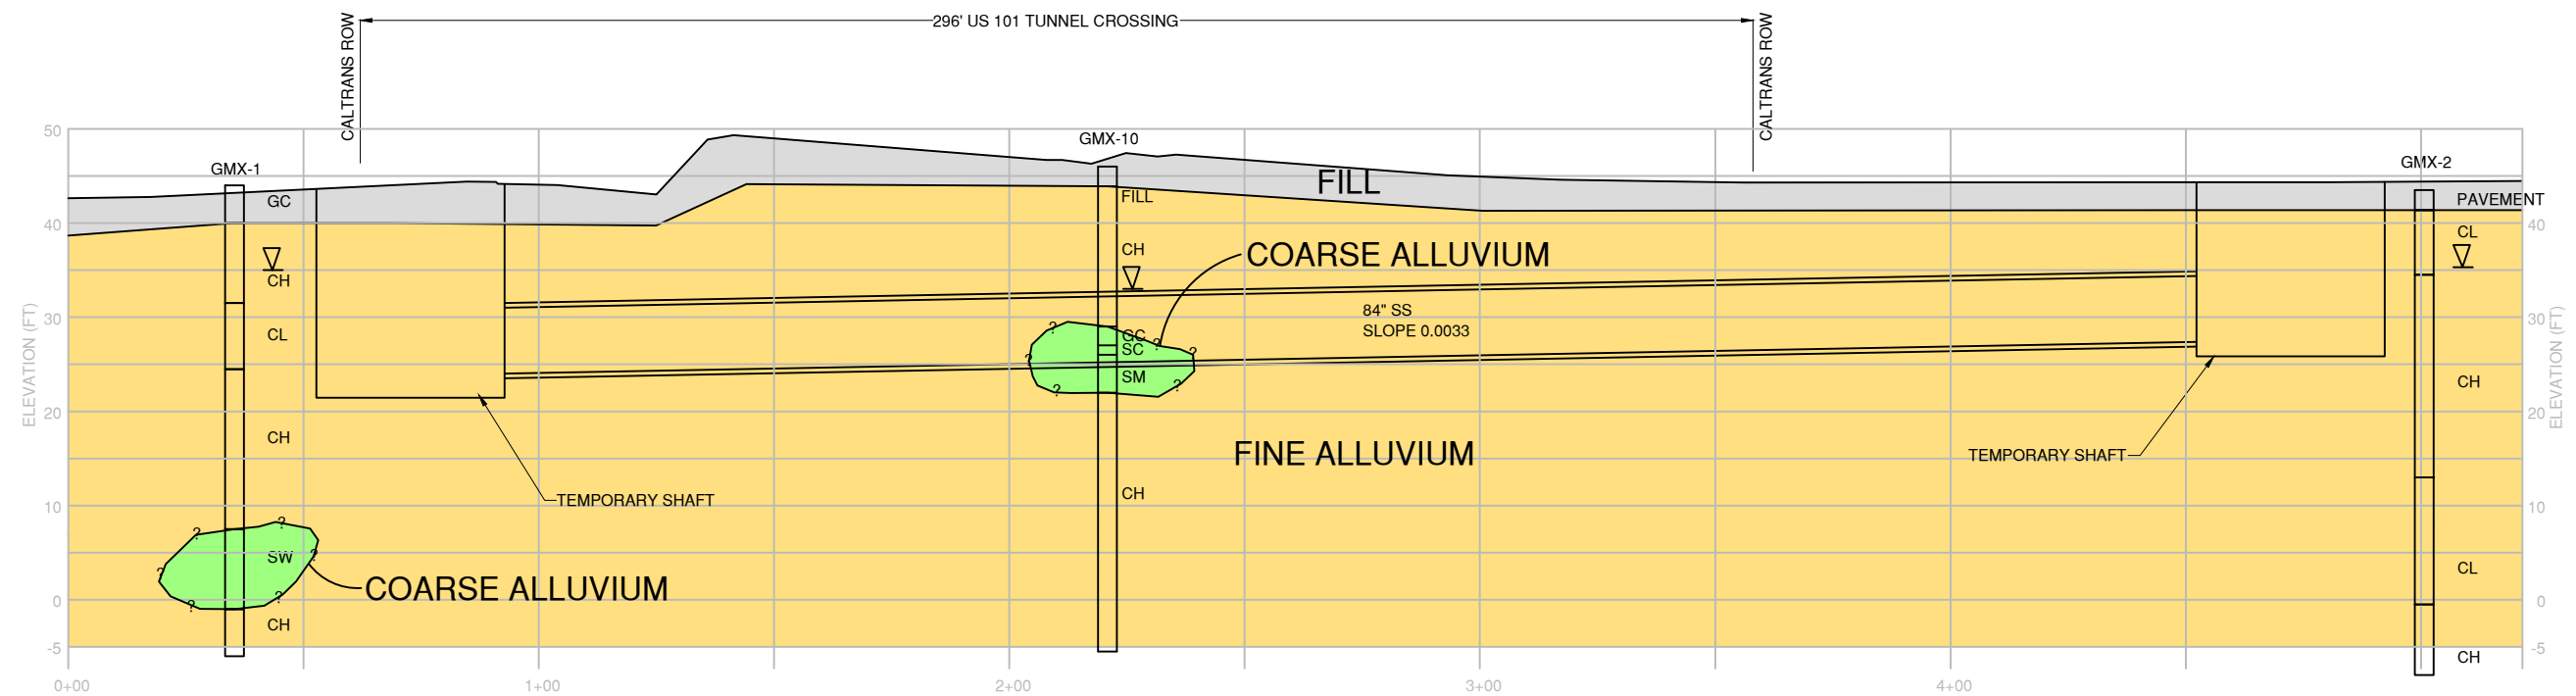

**Table I**  
**Tunnelman's Ground Classification for Soils**  
**(after Heuer, 1974)**

Classification		Behavior	Typical Soil Types
Firm		Heading can be advanced without initial support and final lining can be constructed before ground starts to move	Loess above water table; hard clay, marl, cemented sand, and gravel when not highly overstressed
Raveling	Slow Raveling	Chunks or flakes of material begin to drop out of the arch or walls sometime after the ground has been exposed, due to loosening or to overstress and brittle fracture (ground separates or breaks along distinct surfaces, opposed to squeezing ground). In fast raveling ground, the process starts within a few minutes, otherwise the ground is slow raveling	Residual soils or sand with small amounts of binder may be fast raveling below the water table; slow raveling above. Stiff fissured clays may be slow or fast raveling depending upon degree of overstress
	Fast Raveling		
Squeezing		Ground squeezes or extrudes plastically into tunnel, without visible fracturing or loss of continuity, and without perceptible increase in water content. Ductile, plastic yield and flow due to overstress	Ground with low frictional strength. Rate of squeeze depends on degree of overstress. Occurs at shallow to medium depth in clay of very soft to medium consistency. Stiff to hard clay under high cover may move in combination of raveling at execution surface and squeezing at depth behind surface
Running	Cohesive Running	Granular materials without cohesion are unstable at a slope greater than their angle of repose ( $\nabla$ 30-35 degrees). When exposed at steeper slopes they run like granulated sugar or dune sand until the slope flattens to the angle of repose.	Clean, dry granular materials. Apparent cohesion in moist sand or weak cementation in any granular soil may allow the material to stand for a brief period of raveling before it breaks down and runs. Such behavior is cohesive-running.
	Running		
Flowing		A mixture of soil and water flows into the tunnel like a viscous fluid. The material can enter the tunnel from the invert as well as from the face, crown, and walls, and can flow for great distances completely filling the tunnel in some cases.	Below the water table in silt, sand, or gravel without enough clay content to give significant cohesion and plasticity. May also occur in highly sensitive clay when such material is disturbed.
Swelling		Ground absorbs water, increases in volume, and expands slowly into the tunnel.	Highly preconsolidated clay with plasticity index in excess of about 30, generally containing significant percentages of montmorillonite clay.

San Francisco, CA 94104

**Subject: FINAL – Phase I Environmental Assessment**  
60-Inch Brick Interceptor Phase VIA Project  
San Jose, California

Dear Mr. Romer:

AMEC Environment & Infrastructure, Inc. (AMEC) is pleased to submit this final Phase I Environmental Assessment report for the alignment alternatives being studied for the 60-Inch Brick Interceptor Phase VIA Project (project). The primary purpose of this Phase I assessment is to screen for potential environmental conditions that may affect design and construction of the new interceptor sewer.

This Phase I assessment included a site reconnaissance, review of available historical documents, and a regulatory agency file search. In addition, we visited several regulatory agencies to further review and evaluate environmental sites identified along the alignment corridors.

On January 14, 2010 AMEC submitted the Revised Draft – Phase 1 Environmental Assessment report to AECOM USA, Inc. (AECOM) and the City of San Jose (City) for review and comment. In an email received on November 15, 2012, AECOM gave AMEC authorization to finalize all draft reports that were prepared by AMEC for the project. In a separate telephone conversation, AMEC was informed that AECOM and the City did not have review comments on the revised draft report (dated January 14, 2010).

It should be noted that the originally-submitted revised draft Phase 1 Environmental Assessment report was not significantly changed to prepare this final report, including the conclusions and recommendations. AMEC has not collected additional information or data that may now be available along the proposed project alignment or in the general project vicinity. In the time since the revised draft report was submitted for review and comment, it is possible that additional environmental sites or impacted conditions have been identified along the proposed project alignment, or in the general project vicinity. Collecting, reviewing, and evaluating any data and information related to any such additional environmental sites or impacted conditions is beyond AMEC's current scope of work. Surface and subsurface soil and groundwater conditions along the project alignment, or in the project vicinity, also may be different from those conditions described in this report due to recent development activities and/or changes in the environment. If they have occurred, the effects that such changes may have on our conclusions

## **PHASE I ENVIRONMENTAL ASSESSMENT**

### **60-Inch Brick Interceptor Phase VIA Project**

### **San Jose, California**

#### **EXECUTIVE SUMMARY**

AMEC Environment & Infrastructure, Inc. (AMEC, formerly AMEC Geomatrix, Inc.) prepared this Phase I Environmental Assessment Report for AECOM USA, Inc. (AECOM). AECOM is assisting the City of San Jose with its plans to develop Phase VI of the sanitary sewer interceptor system. The plan consists of the replacement and realignment of approximately 4,500 linear feet of 60-inch-diameter brick interceptor sewer with a new interceptor sewer between existing Structure G located at North 4<sup>th</sup> Street and Commercial Street and existing Structure E located at Zanker Road and Old Bayshore Freeway.

For the purposes of this environmental assessment, the project area was delineated as the area encompassing four potential alignments and extending approximately 500 feet outward. Based on this environmental assessment, AMEC developed the following conclusions regarding potential environmental concerns at the project area:

- Based on the depth to groundwater within the project area footprint, it is likely that groundwater will be encountered during construction activities regardless of which alignment is selected. Generally, shallow soils in the area are relatively fine-grained (i.e., silt and clay) suggesting hydraulic conductivities are limited. As a result, migration of contaminants and the zone of influence of required dewatering activities within the native materials may be limited.
- If used in the construction of the existing utilities underlying the streets within the project area, coarse-grained backfill (i.e., sands and gravels) below the groundwater may act as a conduit for contaminant transport. In addition, these coarse grained-materials may also promote significant water flows during construction activities.
- The vicinity of the project area was historically used for agricultural purposes. Several of the pesticides historically used in the area, including organo-chlorinated pesticides, are persistent in the environment. In addition, arsenical pesticides were frequently used in the Santa Clara Valley. As a result, shallow soils may contain residual pesticides. Generally, shallow soils along the four alignment alternatives have been significantly disturbed as a result of existing development, which likely diluted (or removed) residual impact; however, in those areas where shallow soils have not been disturbed, pesticides may remain in the shallow soils.

- The project area is adjacent to two major highways, Interstate 880 and Highway 101. As a result, shallow soils in the vicinity of these highways may contain elevated levels of aeriually-deposited lead primarily associated with historical use of leaded gasoline.
- Numerous sites within the project area and adjacent areas are known to have underlying soils and groundwater impacted with a variety of chemicals including petroleum hydrocarbons and chlorinated volatile organic compounds (VOCs). In addition, based on the history and types of businesses operating in the area, other sites may be impacted with petroleum hydrocarbons, chlorinated VOCs, and heavy metals.
- One of the existing sanitary sewers within the project area is a 113-year-old 60-inch brick-lined sewer located approximately one block northeast of and parallel to North 4<sup>th</sup> Street. Due to its age, construction, and probable historical use in carrying wastewater from industrial facilities, chemicals may have leaked from the sewer to adjacent and underlying soil and groundwater.

AMEC recommends that Phase II sampling of soil and groundwater underlying the project area be undertaken to screen for the presence of contaminants of concern that could result in (1) a potential health risk to construction workers and the public (2) increased handling/disposal costs of excavated materials and (3) the treatment or disposal of groundwater associated with dewatering activities.

# PHASE I ENVIRONMENTAL ASSESSMENT

## 60-Inch Brick Interceptor Phase VIA Project

### San Jose, California

#### 1.0 INTRODUCTION

AMEC Environment & Infrastructure, Inc. (AMEC, formerly AMEC Geomatrix, Inc.) prepared this Phase I Environmental Assessment Report for AECOM USA, Inc. (AECOM). AECOM is assisting the City of San Jose (City) with its plans to develop Phase VI of the sanitary sewer interceptor system (project). The plan consists of the replacement and realignment of approximately 4,500 linear feet of 60-inch-diameter brick interceptor sewer with a new interceptor sewer between existing Structure G located at North 4<sup>th</sup> Street and Commercial Street and existing Structure E located at Zanker Road and Old Bayshore Freeway.

This project will require excavation of soil to depths of up to approximately 20 feet below ground surface (bgs), therefore, potential existing environmental impacts to soil and groundwater could affect worker health and safety and the disposition of excess soil and/or groundwater generated during construction activities.

This report focuses on the potential environmental conditions that may be encountered during the construction activities along the selected interceptor sewer project alignment. The specific objectives of the Phase I work were to:

- Identify existing conditions at or near the project area that may result in, or indicate the presence of, adverse chemical impacts to soil or groundwater (businesses that use chemicals, or other evidence of potential soil or groundwater impacts, such as evidence of a chemical release);
- Perform a review of readily-available historical information to identify previous businesses along the project area that could have chemically impacted soil or groundwater in the past;
- Perform a regulatory agency file review to identify whether publicly-documented environmental sites are present in the vicinity of the project area, and if so, whether those sites may have affected soil or groundwater conditions along the project area; and
- Recommend areas where collection of soil and/or groundwater samples for analysis may be warranted based on the compilation of information gathered.

On January 14, 2010 this report was submitted in draft form for review and comment by AECOM and the City. In an email received on November 15, 2012, AECOM gave AMEC authorization to finalize all draft reports prepared by AMEC for the project. In a separate

telephone conversation, AMEC learned that AECOM and the City did not have review comments on the draft reports.

It should be noted that AMEC has not collected additional information or data that may now be available along the proposed project alignment or in the general project vicinity; therefore, the originally-submitted draft Phase I environmental assessment report was not significantly changed to prepare this final report, including all conclusions and recommendations. In the time since the draft report was submitted for review and comment, it is possible that additional environmental sites or impacted conditions have been identified along the proposed project alignment, or in the general project vicinity. Collecting, reviewing, and evaluating any data and information related to any such additional environmental sites or impacted conditions is beyond AMEC's current scope of work. Surface and subsurface soil and groundwater conditions along the project alignment, or in the project vicinity, also may be different from those conditions described in this report due to recent development activities and/or changes in the environment. If they have occurred, the effects that such changes may have on our conclusions and recommendations also have not been evaluated, and have not been addressed in this final report.

## **2.0 GENERAL SITE SETTING**

### **2.1 LOCATION AND PHYSICAL SETTING**

For the purposes of this Phase I environmental assessment a project area was defined encompassing four potential alignments connecting the intersection of Commercial Street and North 5<sup>th</sup> Street in the northern portion of San Jose, California (see Figure 1) to a sanitary sewer junction structure located north of Highway 101 adjacent to Zanker Road. The project area extends approximately one city block (500 feet) around the alignments (see Figure 2). The project area encompasses crossings of Interstate 880 and Highway 101.

Currently, raw sewage in the vicinity of the project area is conveyed by a series of three interrelated systems. A 60-inch brick sewer, which was built in 1896, is located in a 20-foot-wide easement northeast of and generally parallel to North 4<sup>th</sup> Street. This sewer is surrounded by private property along much of its alignment. The top of the sewer is relatively close to the ground surface (i.e., there is a limited amount of cover). The plans for the brick sewer indicate that the cross-section is circular. According to City of San Jose personnel, the brick-work is unreinforced.

To provide additional capacity and improved hydraulics, two new reinforced concrete pipe (RCP) sewers were installed along North 4<sup>th</sup> Street, one in 1959 and the other in 1969. Generally, these RCP sewers flow in parallel to the 60-inch brick sewer. The invert elevations for the RCPs are several feet lower than the corresponding elevations along the 60-inch sewer. The original inside diameters for the RCP sewers were 54-inches and 90-inches.

Subsequent rehabilitation efforts have reduced the inside diameters to 40 inches and 82 inches, respectively.

Various other utilities are located along the North 4<sup>th</sup> Street corridor including storm sewer, fresh water, telecommunications, and electric.

## **2.2 TOPOGRAPHY**

The vicinity of the project area is relatively flat, sloping gently to the northwest towards San Francisco Bay. Elevations at the project area range from approximately 60 feet above mean sea level (msl) in the south eastern portion to approximately 50 feet msl in the northwestern portion.

## **2.3 SURFACE WATER AND SITE DRAINAGE**

No surface water bodies are located on or adjacent to the project area. Storm water associated with the area flows through a storm drainage system underlying North 4<sup>th</sup> Street and within the brick sewer in the easement northeast of North 4<sup>th</sup> Street. Additional storm drains are located within the surrounding area. The drains flow northward towards San Francisco Bay.

Coyote Creek is approximately 0.75-miles northeast of the project area and the Guadalupe River is approximately 0.5-mile southwest of the project area.

## **2.4 GEOLOGY AND HYDROGEOLOGY**

This section summarizes the geologic conditions along within the project area. The regional geologic setting is described in Section 2.4.1. The geologic conditions along the alignments are discussed in Section 2.4.2. The hydrogeologic setting is described in Section 2.4.3.

### **2.4.1 Geologic Setting**

The project area is located in the broad valley floor of the Santa Clara Valley in the southern part of the San Francisco Bay region. The valley is crossed by several stream channels that flow towards the San Francisco Bay to the north. Located approximately 0.5 miles west of the project area, the Guadalupe River is the largest channel draining the Santa Clara Valley, with Coyote Creek located approximately 0.75 miles to the east of the project area. The geology of the project area has been mapped by Diblee (2005), Geomatrix (1992), Graymer et al. (2006), Helly et al. (1979; 1994), Rogers (1966), Wagner et al. (1991), Wentworth et al. (1999).

The oldest rocks in the region belong to the Franciscan Complex of Jurassic to Cretaceous age (205 to 65 million years before present [Ma]). These rocks are intensely deformed (i.e., folded, faulted, and fractured). Franciscan Complex rocks generally comprise the “basement” of the Central Coast Ranges northeast of the San Andreas Fault. A sequence of Tertiary (65 to 1.8 Ma) marine and nonmarine sedimentary rocks unconformably overlies, and locally is in

fault contact with, the Franciscan Complex. Some of these Tertiary units are exposed in the foothills adjacent to the alluvial margins of the Bay.

Quaternary (1.8 Ma to present) surficial deposits are present on the margins of the San Francisco Bay, and locally overlie the complexly deformed Jurassic to Cretaceous rocks and Tertiary strata. During the Pliocene and Pleistocene epochs (5 Ma to 11 thousand years before present [11 ka]), sediments eroded from the uplifting Diablo Range and Santa Cruz Mountains formed broad alluvial fan complexes along the margins of what is now the San Francisco Bay. Locally, in stream channels and on low terraces, Holocene (11 ka to present) alluvial and fluvial deposits (including stream channel, overbank, and flood basin deposits) overlie this Plio-Pleistocene alluvium. Near the edges of the bay these Holocene and Pleistocene units interfinger with estuarine mud of San Francisco Bay (Helley et al., 1979).

#### **2.4.2 Project Area Geology and Subsurface Conditions**

According to published maps cited in Section 4.1, the sewer alignments are underlain by Holocene alluvium. Sediment eroded from the uplifting adjacent ranges has accumulated as various types of soil in the adjacent low-lying areas around the San Francisco Bay margin. Alluvial fans within valley floor areas typically have high percentages of fines (silt and clay). Where rivers and streams have transported sediments, the resulting channel deposits generally consist primarily of sand and gravel containing low percentages of fines. Soil deposited during floods away from the main channel usually consists primarily of fines. Alluvial deposits generally become younger and finer toward the axis of the valley.

Published maps from the U.S. Geological Survey divide the alluvium along the alignments into the following geologic units:

- Qhf – Holocene alluvial fan deposits
- Qhff – Holocene alluvial fan deposits, fine facies

These deposits consist primarily of fine-grained materials such as silts and clays, with locally variable amounts of sand. Areas along southern end of the alignment may include little to no sand in the shallow subsurface. These conditions generally extend to depths of approximately 20 to 30 feet, or greater.

#### **2.4.3 Hydrogeology**

The following information regarding hydrogeology in the project area is based on information reviewed during this assessment. Environmental Data Resources, Inc (EDR) performed a search of available environmental records. The databases searched are described below. The search identified 5 water wells within 1 mile of the subject property (EDR, 2009a). Two of the wells are monitoring wells owned by the United States Geological Survey (USGS); two wells

are water supply wells owned by the San Jose Water Company, one inactive and one active; and one of the wells is a water supply well for the Trailer Tel RV Park.

Within the shallow water-bearing zone present in the relatively low permeability clays and silts generally underlying the project area, groundwater flow direction is variable. Regionally, flow is to the northwest towards San Francisco Bay; however, locally, flow direction varies significantly, potentially due to groundwater extraction within and near the project area including significant extraction from six Caltrans-operated dewatering wells along Interstate 101 in the vicinity of the North 10<sup>th</sup> Street overpass. AMEC reviewed information related to these wells that was available in the project file for the BW/IP International site; however, the information was limited to historical documents from the mid 1990s. The wells were installed to depths of approximately 75 to 90 feet below ground surface (bgs) with screened intervals ranging from 40/55 feet bgs to 70/85 feet bgs. In the mid 1990s, approximately 3,000 to 4,500 gallons per minute of water were extracted from these wells (Environmental Solutions, 1993). Several historical environmental documents reviewed as part of this Phase I referred to the influence of these wells on groundwater flow direction. The current status of the wells is unknown.

Groundwater within the shallow water-bearing zone occurs at depths of approximately 10 feet bgs with historical high groundwater levels of approximately 4 feet bgs. Groundwater in the deeper water-bearing zone occurs in coarser materials with a generally higher hydraulic conductivity. Regionally, this deeper water bearing zone is impacted with chlorinated solvents associated with solvent recycling activities to the south and east of the project area. Given the limited depths associated with this project, it is unlikely that any impacts in this deeper water-bearing zone will affect construction activities.

### **3.0 METHODOLOGIES FOR COMPILING ENVIRONMENTAL INFORMATION**

This section presents a summary of the methodologies used to obtain and compile environmental information to meet the objectives described above. The information reviewed included publicly available historical documents and environmental databases.

Reconnaissance of the project area and vicinity was conducted by AMEC personnel. The results of this review are presented in Section 4.

#### **3.1 HISTORICAL DOCUMENT REVIEW**

AMEC reviewed historical information provided by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut, including available Sanborn Fire Insurance Maps, aerial photographs, and topographic maps.

### **3.1.1 Sanborn Fire Insurance Maps**

EDR, which maintains copyright to the largest and most complete collection of Sanborn maps, indicated that Sanborn fire insurance maps were not available for the project area as documented in Appendix A.

### **3.1.2 Aerial Photographs**

Available aerial photographs were reviewed to identify features or activities that could have affected soil or groundwater conditions at the project area. Historical aerial photographs provided by EDR for the years 1939, 1948, 1956, 1965, 1974, 1982, 1993, 1998, and 2005 were reviewed (EDR, 2009d). Copies of the aerial photographs are presented in Appendix B. Observations made from the review of aerial photographs are described in Table 1.

### **3.1.3 Topographic Maps**

Available topographic maps were reviewed to identify features or activities that could have affected soil or groundwater conditions at the project area. Historical topographic maps provided by EDR for the years 1953, 1961, 1968, 1973, and 1980 were reviewed (EDR, 2009c). Copies of the topographic maps are presented in Appendix C. Observations made from the review of available topographic maps are described in Table 2.

## **3.2 REGULATORY DATA REVIEW**

AMEC retained EDR to perform a search of applicable regulatory databases to identify properties in the vicinity of the project area with documented environmental releases and/or those that use, store, or dispose of regulated chemicals. The EDR Radius Report (EDR, 2009a) is presented in Appendix D. Search radii for the various databases are presented in the EDR Radius Report.

A screening process was used to prioritize sites identified in the EDR report that could significantly impact soil and/or groundwater at the project area. Each of the sites was evaluated with regard to location relative to the project area, the specific database(s) a site was listed in, and its activity status within the designated regulatory agency. Priority sites met one or more of the following criteria:

- Leaking Underground Storage Tank (LUST) sites with closed regulatory status (i.e., facility has been issued a closure letter or “no further action” letter) that had impacted soil or groundwater were selected for further review if they were within the project area footprint. Closure does not necessarily indicate that a site was completely remediated. Closure was frequently granted where residual impacts did not appear to pose a significant risk under current use scenarios with the understanding that concern may remain should subsurface soils and/or groundwater be disturbed. In addition, closure may have been granted at sites based on a limited suite of analyses (i.e., petroleum hydrocarbons), where historical uses and sources may have resulted in other impacts

(i.e., solvents associated with waste oil). Consideration at these sites was focused on such residual impacts remaining in place and potential impacts not previously identified such as solvents associated with waste oil.

- Leaking Underground Storage Tank (LUST) sites with open regulatory status (i.e., facility has not been issued a closure letter or a “no further action” letter) that had impacted soil or groundwater were selected for further review if they were within approximately 1/8-mile of the project area.
- Sites listed on the Spills, Leaks, Investigations and Cleanups (SLIC) database were evaluated further if they had open regulatory status and were within ¼-mile of the project alignment. Open SLIC sites with documented releases of chlorinated solvents were selected if they were within 1 mile of the project alignment.
- Sites that currently or historically had USTs were selected for further review if they were within 1/8-mile of the project area.
- Sites listed on the following databases were selected if they were within 1/8-mile of the project area: Hazardous Materials Information Reporting System (HMIRS), California Hazardous Materials Incident Reporting System (CHMIRS), Mines Master Index File (MINES), Manufactured Gas Plants (MGP), Emergency Response Notification System (ERNS), and Clandestine Drug Labs (CDL).
- Sites on the CORTESE Hazardous Waste & Substances Sites List were selected for further review if they were within 1 mile of the project area.

Sites eliminated from further evaluation were removed because of their distance from the project area, because the database they were listed on did not indicate a release of hazardous materials, and/or because the EDR database indicated that the case had received regulatory closure and were outside of the project area.

EDR provided a list of properties that appeared on regulatory databases, but could not be mapped due to incomplete address information. AMEC attempted to locate these sites, referred to as “orphan sites,” using the information provided in the EDR report (EDR, 2009a). If an orphan site was determined to be within 1 mile of the project area, AMEC used the criteria described above to evaluate whether it was a priority site.

Available files for priority sites were obtained from the following sources:

- Geotracker database, an online repository of data and information related to environmental sites that are regulated by the California State Water Resources Control Board (Water Board). These files were reviewed to obtain additional information regarding the history of environmental investigations performed, hydrogeologic conditions at the site, types of chemicals identified in soil and/or groundwater, and information regarding the current status of investigations or remediation at each site.
- Envirostor database, an online repository of data and information related to environmental sites that are regulated by the California Department of Toxic Substances Control. These files were reviewed to obtain additional information regarding the history of environmental investigations performed, hydrogeologic

conditions at the site, types of chemicals identified in soil and/or groundwater, and information regarding the current status of investigations or remediation at each site.

- Santa Clara County Local Oversight Program, which maintains an online database for LUST cases regulated under the Santa Clara County LOP. These files were reviewed to obtain additional information regarding the history of environmental investigations performed, hydrogeologic conditions at the site, types of chemicals identified in soil and/or groundwater, and information regarding the current status of investigations or remediation at each site.
- The City of San Jose CHRIS database, an online repository of permitting and site inspection information for properties located within the San Jose city limits. The site was reviewed for selected sites to identify historical uses and potential issues related to chemical storage and use.
- In addition, for selected sites, Google-based web searches were performed to identify additional information relevant to the environmental status of sites.

Professional judgment also was used to evaluate the potential for a site to affect the project area; examples of professional judgment criteria used in the prioritization of sites are described below:

- Open LUST cases were evaluated considering research conducted at Lawrence Berkeley National Lab (LBNL), which demonstrated that impacts from leaking underground fuel tanks generally do not extend from a source area in groundwater more than 250 feet (Rice et al., 1995). The LBNL study applies to gasoline-related components, including benzene, except for methyl-tert-butyl ether (MTBE), which is less-readily biodegradable than other gasoline components, and hence may migrate further beyond the source. To be conservative, AMEC chose to omit these open LUST cases if they were greater than 500 feet from the project area.
- The degree to which remediation at a site reportedly provided hydraulic control and containment was taken into account.
- Regional and local groundwater flow direction was used to evaluate whether impacts from a site could pose a potential risk for construction workers or disposal of soil and groundwater generated during construction in the project area.
- The possibility for dewatering activities to affect local hydraulic conditions, thereby potentially drawing groundwater from the impacted areas, was also taken into consideration. Based on site lithology, it was assumed that the potential zone of influence from dewatering would not extend more than 100 feet from the excavated alignment(s).

Based on this review, the priority sites were ranked based on their potential to affect conditions in the project area (refer to Figure 3) relative to construction worker health and safety or the disposal of soil and/or groundwater. As shown on Figures 3A through 3C, sites with documented releases to the environment that, based on the review of available data, indicated that soil and/or groundwater within the project area footprint was, or likely was, affected by the release were ranked highest (rank = red). This may include sites where limited information is

available; however, a regulatory agency still maintains the site as an open case. In addition, it may include sites that have not yet been scrutinized by a regulatory agency; however, historical uses (e.g., potential dry-cleaning activities) often result in significant impacts to underlying soil and groundwater.

Sites with documented releases to the environment that may affect soil and groundwater beneath the project area were ranked second highest (rank = yellow). Sites where additional information was not available also were generally included in this second tier (rank = yellow).

Selected sites that had data indicating they did not likely pose a threat to the project area were ranked lowest priority (rank = green). Priority rankings, along with a summary of the regulatory review for the priority sites, are presented in Table 3. Facility designations presented on Table 3 are based on information provided in the EDR radius report (EDR, 2009a). In some cases, current businesses are operating at the sites under other names.

In addition to the ranking of sites (red, yellow, green), sites were categorized based on the types of activities warranting consideration for potential soil and groundwater impacts. Designations included: UST for historical underground storage tanks; LUST for leaking underground storage tanks; dry cleaning for current or historical dry cleaners; Historical Gas Stations; Solvent Recycling; Industrial; Auto Repair for auto repair and auto body shops; High Tech for facilities related to surface treatment; and, Metal Finishing for plating and other metal finishing operations.

### **3.3 SITE RECONNAISSANCE**

Mr. Donald Daniels, Senior Geologist with AMEC, performed a site reconnaissance on November 23, 2009 to observe general conditions at the project area and at immediately adjacent areas. Mr. Daniels walked the streets within the project area including North 4<sup>th</sup> Street, East Gish Street, Koll Circle, Commercial Street, North 5<sup>th</sup> Street, North 7<sup>th</sup> Street, and Terminal Avenue. To the extent possible, Mr. Daniels observed properties from the street and from readily accessible parking areas. In addition, he performed a drive-by reconnaissance of the surrounding area.

During the site reconnaissance, information was recorded as to the location and observed conditions that potentially could affect soil or groundwater at the project area. Specifically, the reconnaissance focused on the storage or dumping of hazardous materials or waste on the project area or hazardous materials use, storage, or spillage at facilities within and adjacent to the project area including evidence of underground storage tanks.

### **3.4 INTERVIEW**

Mr. Daniels interviewed Mr. Napp Fukuda, of the City of San Jose, Environmental Services on December 7, 2009, regarding the environmental status of the vicinity of the project area. Mr.

Daniels also interviewed John Mukhar of the City of San Jose, Environmental Services on December 9, 2009, regarding the environmental status of the vicinity of the project area.

## **4.0 STUDY RESULTS**

This section details the environmental findings of the environmental assessment of the project area.

### **4.1 HISTORICAL DOCUMENT REVIEW**

AMEC reviewed historical information including available Sanborn Fire Insurance Maps, aerial photographs, and topographic maps.

#### **4.1.1 Historical Sanborn Map Review**

Sanborn Fire Insurance Maps available from EDR do not provide coverage for the area encompassing the project area as indicated in Appendix A (EDR, 2009b).

#### **4.1.2 Aerial Photograph Review**

Aerial photographs from 1939, 1948, 1956, 1965, 1974, 1982, 1993, 1998, and 2005 were reviewed for the project area (EDR, 2009d). Between 1953 and 1980, the project area transitioned from orchards and undeveloped land to commercial and industrial land use. Detailed descriptions of the topographic maps reviewed are presented in Table 1 and copies of the aerial photographs are presented in Appendix B.

#### **4.1.3 Topographic Map Review**

Topographic maps dated from 1953, 1961, 1968, 1973, and 1980 were reviewed for the project area (EDR, 2009c). Land use adjacent to the study area corridor was initially agricultural and then primarily commercial and industrial. Detailed descriptions of the photographs reviewed are presented in Table 2 and copies of the topographic maps are presented in Appendix C.

### **4.2 REGULATORY REVIEW**

Based on a review of available documentation as described in Section 3.2, above, Table 3 presents relevant information regarding priority sites within and in the vicinity of the project area. Information includes site identification number (ID #), site name, address, source of relevant information, regulatory status, date of most recent information, site history and description, the most recent analytical results, depth to groundwater, priority status and site use classification. The ID # refers to the location with lower numbers at the northwestern end of the project area and higher numbers at the southeastern end. Figure 3 presents the location of each priority site, the associated number, color coding for the outline of the site (red, yellow, and green), and color coding for the site indicating use classification. In addition, three tiles, which are outlined on Figure 3 are presented in Figures 3a, 3b, and 3c. These figures also

identify site names. The following is a brief summary of potential areas of concern within the vicinity of the project area:

- The area east of Interstate 880 between North 4<sup>th</sup> Street and North 7<sup>th</sup> Street and between Commercial Street and Interstate 880 is industrialized. The Commercial Fueling Corporation (ID #44) at 1170 North 4<sup>th</sup> Street is impacted with petroleum hydrocarbons extending along North 4<sup>th</sup> Street to the northwest, potentially along backfill materials associated with various utilities within the North 4<sup>th</sup> Street corridor. The area in the vicinity of North 5<sup>th</sup> Street and North 7<sup>th</sup> Street is impacted by both petroleum hydrocarbons and chlorinated solvents including at BW/IP International, Inc. (ID #38).
- Several sites of potential concern were identified along North 4<sup>th</sup> Street including: a possible former dry cleaning facility (ID #25); former gas stations where no documentation regarding removal of underground storage tanks was available for review (ID #31 and #32); and the presence of residual impacts at Coast Counties Truck (ID #9) at 1740 North 4<sup>th</sup> Street within the existing 60-inch brick sewer alignment.
- The area northeast of Highway 101 along Terminal Avenue and Old Bayshore Highway is industrialized. Numerous underground tank sites were noted as were plating operations and high tech surface treatment facilities.
- Based on the age of the 60-inch brick sewer, which was constructed approximately 113 years ago, and the likelihood that, historically, industrial facilities discharged hazardous materials to the sewer, the adjacent and underlying soil and groundwater may be impacted due to releases from the line.
- Based on the presence of the two freeway systems (Highway 101 and Interstate 880), shallow soils in the area may be impacted with aurally deposited lead. Typically, soil affected with aurally deposited lead is limited to the first few inches to a foot below the ground surface (bgs). Within this depth interval, significantly elevated concentrations of lead may be present.
- Based on the historical agricultural use of the area, shallow soils may be impacted with various pesticides and herbicides, in particular along the southwestern side of North 4<sup>th</sup> Street, where orchards were likely present until the 1960s.

### 4.3 SITE RECONNAISSANCE

Mr. Daniels performed a reconnaissance of the project area and surrounding areas on November 23, 2009. Based on the reconnaissance, the following issues were noted:

- The portion of the project area southeast of Interstate 880 is predominantly industrial consisting of automotive and light industrial manufacturing and repair facilities. The area southeast of the project area is residential. The former Commercial Fueling Corporation at 1170 North 4<sup>th</sup> Street (ID #44), which is one of the sites associated with significant impact along the southern portion of the North 4<sup>th</sup> Street corridor, is currently a vacant lot.
- The portion of the project area between Interstate 880 and Highway 101 is a mix of commercial, light industrial, and hospitality services (hotels and restaurants). In addition, a condominium complex is located along North 4<sup>th</sup> Street. Several formerly

commercial properties along North 4<sup>th</sup> Street are currently vacant lots including the former Armored Transport property at East Rosemary Street (ID #34) and North 4<sup>th</sup> Street, the former Chevron Station at East Gish Avenue (ID #32) and North 4<sup>th</sup> Street, and an unknown former facility located on the southwestern side of North 4<sup>th</sup> Street across from the Coast Counties facility (i.e., across from ID #9).

- A commercial development is located around Koll Circle, which is occupied with numerous small businesses. Businesses within the complex varied from plating operations, to telecommunications companies to professional services. Buildings in the complex were one and two story slab on grade structures with office access along Koll Circle and operational access along alleys to the rear of the buildings. To the extent possible, Mr. Daniels observed activities at these businesses, which appeared to use limited amounts of chemicals. There was no evidence observed indicating that underground tanks are associated with these businesses.
- The area northeast of Highway 101 is predominantly industrial. Mr. Daniels was only able to observe activities along Terminal Avenue from the street. The area remains industrial. The industrial park within Reynolds Circle also consists of numerous small businesses that generally appeared to have limited chemical use.
- Throughout the project area, a large number of commercial properties were available for lease including one hotel property at the northern end of North 4<sup>th</sup> Street. Generally, those buildings that house small businesses were occupied, while those building structured for single use businesses were frequently vacant.
- Mr. Daniels observed truck washing activities at the Hertz Rental facility (former Penske Truck Leasing site [ID #10] at 1695 North 4<sup>th</sup> Street) and at the Bayshore International Trucks facility (former Garden State International Trucks facility [ID #21] at 1505 North 4<sup>th</sup> Street). The Hertz facility apparently rents fuel trucks. Both of these sites apparently have existing USTs to fuel the trucks.
- Two unknown vent pipes were observed during the reconnaissance including one at Thedy Auto Repair (ID #43) at 1169 North 5<sup>th</sup> Street and one at Eastern Electric Appliance Repair (ID #47) at 1138 North 5<sup>th</sup> Street. AMEC was unable to determine the function of the vent pipes. Groundwater monitoring wells were noted in North 4<sup>th</sup> Street near Interstate 880, associated with the Commercial Fueling Corporation (ID #44), and along Terminal Avenue, associated with the Western Exterminator site (ID #17). Both wells are associated with known LUST cases.
- During the reconnaissance, Mr. Daniels observed a five-gallon drum of what appeared to be waste oil dumped in the right-hand north-bound lane at 1560 North 4<sup>th</sup> Street. The container had apparently fallen off of a truck. The oily material had flowed across the traffic lane and pooled in the gutter. The incident emphasized the ongoing impacts associated with industrial activities in the area.
- Mr. Daniels observed an apparent boiler vent at the rear of the Deluxe Dye Works site at 1488 North 4<sup>th</sup> Street. The area may be associated with former dry cleaning activities at the property. Personnel at the facility indicated that they do not currently perform dry cleaning at the site.
- Mr. Daniels observed a treatment system in the open lot at the northwestern terminus of the project area, which is apparently a pilot project to control odors associated with the sanitary sewer interceptor. The system consists of a series of aboveground storage

tanks (ASTs) and an associated series of injection pipes going into manholes within the sewer interceptor. Reportedly, the system is not in operation.

#### **4.4 INTERVIEW**

Mr. Daniels, of AMEC, interviewed Mr. Fukuda of the City of San Jose regarding the environmental status of the project area. Mr. Fukuda was not aware of any significant environmental concerns associated with city activities in the area. Similarly, in Mr. Daniels's interview with Mr. Mukhar, who is also of the City of San Jose, Mr. Mukhar was not aware of any significant environmental issues in the vicinity of the project area that were related to the City. Mr. Mukhar indicated that a treatment system noted by Mr. Daniels during the site reconnaissance is associated with a pilot project to control odors in the sanitary sewer at the interceptor located along Zanker Road north of Highway 101, at the north end of the project area.

#### **5.0 CONCLUSIONS**

AMEC performed a Phase I environmental assessment of four potential alignments for a proposed sewer interceptor project in the vicinity of North 4<sup>th</sup> Street in San Jose extending from the intersection of North 5<sup>th</sup> Street and Commercial Street, west of Interstate 880, to Zanker Road northeast of Highway 101. The project area was delineated as the area encompassing the alignments and extending approximately 500 feet outward. Based on our findings from the environmental assessment activities, AMEC developed the following conclusions regarding potential environmental concerns within the project area:

- Based on the depth to groundwater within the project area footprint, it is likely that groundwater will be encountered during construction activities regardless of which alignment is selected. Generally, shallow soils in the area are relatively fine-grained (i.e., silt and clay) suggesting hydraulic conductivities are limited. As a result, migration of contaminants and the zone of influence of required dewatering activities within the native materials may be limited.
- If used in the construction of the existing utilities underlying the streets within the project area, coarse-grained backfill (i.e., sands and gravels) below the groundwater may act as a conduit for contaminant transport. In addition, these coarse grained-materials may also promote significant water flows during construction activities.
- The project area vicinity was historically used for agricultural purposes. Several of the pesticides historically used in the area, including organo-chlorinated pesticides, are persistent in the environment. In addition, arsenical pesticides were frequently used in the Santa Clara Valley. As a result, shallow soils may contain residual pesticides. Generally, shallow soils along the four alignment alternatives have been significantly disturbed as a result of existing development, which likely diluted (or removed) residual impact; however, in those areas where shallow soils have not been disturbed, pesticides may remain in the shallow soils.

- The project area is adjacent to two major highways, Interstate 880 and Highway 101. As a result, shallow soils in the vicinity of these highways may contain elevated levels of aerially-deposited lead primarily associated with historical use of leaded gasoline.
- Numerous sites within the project area and adjacent areas are known to have underlying soils and groundwater impacted with a variety of chemicals including petroleum hydrocarbons and chlorinated volatile organic compounds (VOCs). In addition, based on the history and types of businesses operating in the area, other sites may be impacted with petroleum hydrocarbons, chlorinated VOCs, and heavy metals.
- One of the existing sanitary sewers within the project area is a 113-year-old 60-inch brick-lined sewer located approximately one block northeast of and parallel to North 4<sup>th</sup> Street. Due to its age, construction, and probable historical use in carrying wastewater from industrial facilities, chemicals may have leaked from the sewer to adjacent and underlying soil and groundwater.

## **6.0 RECOMMENDATIONS FOR PHASE II SAMPLING**

Based on the findings of this Phase I environmental assessment, AMEC recommends that Phase II sampling of soil and groundwater underlying the project area be undertaken to screen for the presence of contaminants of concern that could result in: (1) a potential health risk to construction workers and the public, (2) increased handling/disposal costs of excavated materials, and (3) the treatment or disposal of groundwater associated with dewatering activities. The Phase II screening program should include the collection of samples at targeted locations based on the results of the Phase I and at other locations of the alignment to provide spatial coverage. The sampling and analytical program should include the collection of soil and grab groundwater samples and subsequent chemical analyses. The chemical analytical program likely will include total petroleum hydrocarbons (TPH) quantified as gasoline, diesel, and motor oil; VOCs; semi-volatile organic compounds (SVOCs); and heavy metals. In addition, within unpaved areas, shallow samples should be analyzed for pesticides and heavy metals. The analytical program will vary from location to location based on the suspected contaminants of concern at the location being investigated. Upon approval of this report, the sampling and analytical program will be presented in a detailed work plan.

In general, AMEC recommends that targeted soil sampling be conducted where a chemical release may have occurred on site or at an adjacent site that may have impacted soil conditions. AMEC recommends that targeted groundwater be sampled at locations that are near or down gradient of historical sites where potential chemical releases to groundwater may have occurred, and in the vicinity of currently-known environmental sites where groundwater impacts are not clearly delineated or known.

## 7.0 LIMITATIONS

Within the limitations of the agreed-upon scope of work, this Phase I environmental assessment has been undertaken and performed in a professional manner in accordance with generally accepted practices, using the degree of skill and care ordinarily exercised by environmental consultants under similar circumstances. Due to physical limitations inherent to this or any environmental assessment, AMEC expressly does not warrant that the project area is free of pollutants or that all pollutants have been identified. No other warranties, express or implied, are made.

In preparing this report, AMEC has relied upon certain information and representations provided by government entities and upon government database searches provided by others. Except as discussed in this report, AMEC did not attempt to independently verify the accuracy or completeness of that information. To the extent that the conclusions in this report are based in whole or in part on such information, those conclusions are contingent on its accuracy and validity. AMEC assumes no responsibility for any consequence arising from any information or condition that was concealed, withheld, misrepresented, or otherwise not fully disclosed or available to AMEC.

This report has been prepared for the exclusive use of AECOM and the City of San Jose for the 60-Inch Brick Interceptor Phase VIA Project. No other person or organization is authorized by AMEC to rely upon any part of this report.

1	23712108	Superior Tile Company	1625 Remuda Lane	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	4/7/1999	On November 1979 two 6,000-gallon USTs were installed. March 1988, a six thousand-gallon UST topped off in preparation for UST precision testing. March 12, 1988, UST stick measurement indicates a loss of 17 inches of product in 24 hours. The UST was determined to be leaking. March 14, 1988, UST stick measurement indicates an additional loss of 12 inches of product. Forty-five gallons of gasoline remaining in UST pumped out. Of the 6,854 gallons added to the UST for precision testing, 70.5 gallons were used for fueling vehicles, 4,500 gallons were pumped out, and 2,283.5 gallons were lost to the subsurface. May 12, 1988 the UST was removed. Over excavation was not performed. July 1988 to February 1994, soil and water investigations were performed and groundwater extraction system was installed. From August 1995 to February 1997, the groundwater pump-and-treat system operated. A total of 1,627,615 gallons of groundwater was extracted and approximately 14.1 kilograms of petroleum hydrocarbons were removed. This is a closed LUST with residual contaminants on site.	<u>Soil (mg/kg)</u> TPHg = 1400 Benzene = 11 Toluene = 88 Ethylbenzene = 49 Xylenes = 280  <u>Groundwater (µg/L)</u> TPHg = 2,100 Benzene = 11 Toluene = 1.3 Xylenes = 5 Ethylbenzene = 100 MTBE = 26 Lead = ND	3.6 - 15.7	West	Yellow	LUST
2	23712111	San Jose Dry Wall	1609 Regatta Lane	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	5/30/1996	One 2,000-gallons gasoline tank and one 2,000-gallons diesel tank was left in place in February 1987. Prior to tank closure, 160 parts per million TPH were detected in backfill (7.5 feet) and at the native soil interface (9 feet). Due to the lack of significant benzene, toluene, and xylenes, the compound may have been aged gas or diesel. The tanks were fiberglass and 6 years old. Six years later, two samples were collected at 10 feet below ground surface. Contamination was not detected. Due to low severity and localized contamination detected beneath the tanks, Santa Clara Valley Water District closed the site. Residual contaminants remain on site.	<u>Soil (mg/kg)</u> TPH = 160 Benzene = ND Toluene = ND Xylene = 3.7	Unknown	No documentation of groundwater flow found in any of the documents in the Santa Clara LOP website	Green	LUST
3	23712104a	Goble Properties	441 Reynolds Circle	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	2/7/2002	Two USTs of approximately 2,000 gallons each, and of unknown original content, were removed from the site in 2001. No odors or staining were observed in the backfill or native soil below the tanks, and no significant holes or other signs of leakage were observed in the tanks. TPHg, TPHd, BTEX, TOG, and Fuel Oxygenates were non-detect in all the soil samples. TPHg, BTEX, and Fuel Oxygenates were non-detect and TPHd, TOG, and PCE were detected in groundwater. Review of analytical results indicates that a significant contaminant release to the subsurface has not occurred at this site. The relatively high molecular weights of TPHd and TOG suggest that migration of these compounds in groundwater will be minimal. In addition, residual contaminant levels are expected to attenuate with time due to natural biodegradation activities. This is a closed LUST site with residual contaminants remaining on-site. The extent of PCE impact is unknown.	<u>Soil (mg/kg)</u> TPHg = <1.0 TPHd = <1.0 Benzene = <0.005 Toluene = <0.005 Ethylbenzene = <0.005 Xylenes = <0.005 Oil and Grease = <50 Fuel Oxygenates = ND PCE = 0.037 SVOC = ND PCBs = ND  <u>Groundwater (µg/L)</u> TPHg = <50 TPHd = 380 Benzene = <1.0 Toluene = <1.0 Xylenes = <1.0 Ethylbenzene = <1.0 Oil and Grease = 5200 Fuel Oxygenates = ND Cadmium = 17 Chromium = 150 Lead = 490 Nickel = 320 Zinc = 260 PCE = 5.8 PCBs = ND SVOC = ND	Unknown	Unknown	Yellow	LUST

4	23712104b	Haro's Metal Finishing Inc.	439 Reynolds Circle	DTSC - Consent Order	Open	5/14/1998	Unauthorized non-eligible on-site treatment activity. The respondent's current disputed activity is treatment of cyanide zinc plating rinse water with cyanide concentration of about 100-800 mg/L, in the amount of 6,000 gallons per month by pH adjustment using sodium hydroxide, cyanide oxidation using sodium hypochlorite, and precipitation of complex cyanide by using zinc sulfate. The treatment activity utilizes 5 tanks under Unit Name Batch Treatment, and Unit ID Number 2. Submittal of response was required within 30 days of the consent order, but no other reports have been located.	Not available in consent order	Unknown	Unknown	Yellow	Metal Finishing
5	23712104c	Former Eldron Drapery and Dry Cleaning	413 Reynolds Circle	TRC "Remedial Performance Summary and Third Quarter Groundwater Monitoring Report"	SLIC Open	12/8/2008	Former drapery and dry cleaning site. A Phase I was conducted in 2001 where a subsurface investigation was recommended to evaluate possible impacts to soil and groundwater related to the Eldron Drapery and Dry Cleaning facility. PCE was detected in the soil and TCE in groundwater. Source removal actions were successful in removing impacted soils from the source area thereby reducing the chance of further impacts to shallow groundwater. Based on historical and current groundwater data from the site borings, monitoring wells and sparge points, both the PCE and TCE plumes appear to be stable and defined within the current well network. This remains an open SLIC site.	<u>Soil (mg/kg)</u> PCE = 0.294 TCE = 0.0506 1,1-DCA = <0.01 1,1-DCE = <0.01 cis-1,2-DCE = <0.01 1,1,1-TCA = <0.01  <u>Groundwater (ug/L)</u> PCE = 520 TCE = 49.8 1,1-DCA = <0.5 1,1-DCE = <1.0 cis-1,2-DCE = <0.5 1,1,1-TCA = <0.5 Chloromethane = <0.5	Unknown	West	Red	Dry Cleaning
6	23712104d	Ultra-Chem	425 & 460 Reynolds Circle	DTSC - Site Screen Form	Open	1/18/2002	Ultra-Chem started renting in the industrial complex space 425 in June 1980 until 1982. Space 460 was rented in 1981 to 1983 when all operations was moved to 1310 Old Bayshore (see Moyer Chemical Company.) Ultra-Chem submitted a closure plan for the above addresses in February 1983. A certified closure date (4/28/83) is listed in the files. Although facility processed significant amounts of solvents, no soil or groundwater samples were collected as a component of closure. Facility moved to 1310 Old Bayshore Hwy, which now is a significantly impacted site.	No samples collected	Unknown	Unknown	Yellow	Solvent Recycling

10	23501004	Penske Truck Leasing Co. Inc.	1695 North Fourth Street	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	12/17/2008	August 2001, one 20,000-gallon diesel UST, one 12,000-gallon gasoline UST, one 1,000-gallon waste oil UST were removed. Minor concentrations of TPHg, TPHd, and MTBE were detected in a few soil samples during this phase of work at the site. Groundwater was encountered at a depth of approximately 10 feet bgs in the gasoline and diesel tank pit excavation. On-site groundwater monitoring was conducted until 2003. This is a closed site with minimal residual contaminants that remain on-site; however, the site has not been assessed for the presence of solvents associated with the former waste oil tank.	<u>Soil (mg/kg)</u> TPHg = 1.2 TPHd = 53 Benzene = <0.005 Toluene = 0.012 Ethylbenzene = 0.006 Xylenes = 0.018 Oil and Grease = 57 MTBE = 0.009  <u>Groundwater (ug/L)</u> TPHg = <50 TPHd = <50 Benzene = <0.5 Toluene = <0.5 Xylenes = 0.018 Ethylbenzene = 0.006 MTBE = 0.009	8 - 18	North	Yellow	LUST
11	23712098	Mohawk Packing	1660 Old Bayshore Highway	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	2/3/1999	In September 1994, one 10,000 gallon gasoline and diesel tank, one 10,000 gallon diesel, and one 7,500 gallon diesel tank was removed. Two leak detection monitoring wells were installed in 1985. The installation report indicates that diesel contamination in soil was observed. Regular groundwater monitoring started in 1992. Significant levels of groundwater pollution was not observed. However, dissolved levels in the pit water were much more significant (up to 1,600 parts per billion benzene). Over excavation of some of the contained soil was performed. Groundwater samples collected from the monitoring wells have not contained significant levels of petroleum hydrocarbons. It appears that the contamination was localized. Therefore, beneficial uses of water are not considered threatened.	<u>Soil (mg/kg)</u> TPHg = 160 TPHd = 630 Benzene = 1.1 Toluene = 0.41 Ethylbenzene = 0.72 Xylenes = 0.54  <u>Groundwater (ug/L)</u> TPHg = ND TPHd = 110 Benzene = 3.6 Toluene = ND Xylenes = ND Ethylbenzene = ND	8.5 - 9.5	North-northwest	Green	LUST
12	23727053	EFI Global, Inc. (former Penske Truck Leasing)	1691 Old Bayshore Highway	County of Santa Clara - ERA, DEH	LUST Open	1/16/2009	The site was formerly operated as a truck rental and maintenance facility. Site operations included the use and storage of diesel fuel and motor oil, and the accumulation of waste oil during service operations. These operations included two 15,000-gallon diesel fuel UST and ancillary equipment, one 1,000-gallon motor oil AST, and one 500-gallon waste oil AST. In 2005, UST system closure and assessment activities at the site were completed. At the time of removal, the UST system reportedly appeared to be in good condition with no visual evidence of holes or cracks. However, free-floating product was observed on the groundwater within the excavation during the UST removal activities. Groundwater was observed at approximately ten feet bgs. Soils above the groundwater interface reportedly did not appear impacted. Remedial activities were conducted prior to collecting confirmatory soil samples. A single groundwater monitoring well was installed at the site, downgradient from the former UST system. This site is still open.	<u>Groundwater (ug/L)</u> TPHg = <25 TPHd = 196 Benzene = <1.0 Toluene = <1.0 Xylenes = <2.0 Ethylbenzene = <1.0 MTBE = <1.0 tert-Butyl ethyl ether = <5.0 tert-butanol = <10 tert-Amyl methyl ether = <5.0 1,2-Dibromoethane = <1.0 1,2-Dichloroethane = <1.0	Unknown	North-northwest	Yellow	LUST
12	23727053	Rollins Leasing Company	1691 Old Bayshore Highway	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	6/9/1999	Three USTs, one 6,000-gallon diesel and two 550-gallon waste oil, were removed from the site in May 1998. No holes were noted in the tanks; however, gasoline odors were noted in the soils beneath the tanks. TPHd was detected with benzene, toluene, ethylbenzene, xylenes, and MTBE below detection limits. In April 1999 two soil borings were drilled in the areas of concern and samples were retrieved at 11.5 feet below ground surface. Analytical data from soil samples collected indicated that contamination concentration levels were below detection limits of all constituents of concern. This is a closed LUST site with minimal residual contaminants that remain on-site. Although waste oil tanks were removed at the site, groundwater has apparently not been analyzed for solvents.	<u>Soil (mg/kg)</u> TPHd = ND Benzene = ND Toluene = ND Xylenes = ND MTBE = ND  <u>Groundwater (ug/L)</u> TPHd = 1400 Benzene = 1.9 Toluene = ND Xylenes = 0.67 MTBE = ND Oil and Grease = 4,080	11 - 12	Northeast	Yellow	LUST

13	23721092	B&C Produce	1650 Old Bayshore	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	2/5/1992	In 1990, one 10,000 gallons diesel, one 3,000 gallons gasoline, two 1,000 gallons gasoline, and one 10,000 gallons gasoline were removed. Due to the lack of significant contamination detected in the soil samples, no further excavation was performed. There appears to be limited BTEX impact and a leaky transformer for unknown reason.	Soil (mg/kg) TPHg = ND TPHd = 6 Benzene = 0.007 Toluene = 0.006 Ethylbenzene = 0.013 Xylenes = 0.420	17	No documentation of groundwater flow found in any of the documents in the Santa Clara LOP website	Green	LUST
14	23504012	TCI	1610 North Fourth Street	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	5/11/1999	One 10,000 gallons gasoline, one 10,000 gallons diesel, and one 550 waste oil was removed in 1992. Petroleum hydrocarbon were not detected in native soil samples beneath the gas and diesel tanks. TOG was detected beneath the waste oil tank, but was apparently over excavated. As a requirement for case closure, soil samples were collected in April 1999 beneath the waste oil tank and analyzed for oxygenates. No oxygenates were detected. Additional samples were not required beneath the gas and diesel tanks because there was not a release from those tanks. This is a closed LUST site with minimal contaminant residual on-site. Although PCE was detected in soil at the site, groundwater has not been tested for solvents. 16	23727015	Cascade Computer Coatings	1615 Terminal Avenue	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	5/6/1999	One 1,000-gallons UST was closed in place in February 1987. TPHg and benzene was detected in soil collected from borings placed adjacent to the tank. In 1999, groundwater was sampled from an extraction well adjacent to the former tank. TPHg and benzene was detected in groundwater; no MTBE was detected. It was noted that groundwater remediation is being performed in the vicinity of the site for another fuel leak release at S&W Company, 1607 Terminal Avenue, San Jose. This is a closed LUST site. Residual contaminants remain on-site. Based on the name of the facility, solvent degreasers may have been used. The site has not been assessed for the presence of solvents.	Soil (mg/kg) TPHg = 105 TPHd = ND Benzene = 6 Toluene = 4 Xylenes = 17 MTBE = ND  Groundwater (ug/L) TPHg = 150 TPHd = 110 Benzene = 1.9 Toluene = ND Xylenes = 0.67 Ethylbenzene = ND	unknown	Southeast	Yellow	High Tech
17	23727017	Kragen/Merritt/Western Exterminator	1607 and 1611 Terminal Avenue	ATC Associates Inc. "Quarterly Groundwater Monitoring Report - Second Quarter 2009 - Kragen/Merritt" and On-Site Technologies "RI/IRP 1607 and 1611 Terminal Avenue"	LUST Open	7/15/2009 - GW 11/23/1993 - soil	Groundwater monitoring report that includes both 1607 and 1611 Terminal Avenue. The site located at 1607 Terminal Avenue is currently occupied by an asphalt maintenance company while the site at 1611 Terminal Avenue is currently occupied by a pest extermination company. Based on recent quarterly groundwater monitoring results, the primary chemicals of concern impacting soil and groundwater beneath the site include TPHg and benzene. Low concentrations of toluene, ethylbenzene, and total xylenes and sporadic low concentrations TBA and MTBE have historically been detected in site groundwater. Laboratory analytical data from previous soil investigations indicate the presence of TPHg, BTEX, and MTBE in soil samples collected both on- and offsite. Based on quarterly monitoring reports, it appears that the plume is stabilized on-site or appears to migrate at a low rate. The plume has not been fully delineated up-gradient to the east or cross-gradient to the north and northeast in either zone.	Soil (mg/kg) TPHg = 85 Benzene = 13 Toluene = 30 Xylenes = 800 Ethylbenzene = 160  Groundwater (ug/L) TPHg = 6,460 Benzene = 613 Toluene = 44 Ethylbenzene = 223 1,2 DCA = 3.2	9 - 10	Groundwater flow direction is toward the Northwest under a calculated gradient of approximately 0.005 ft/ft in the shallow zone and toward the West under a calculated gradient of approximately 0.01 ft/ft in the deep zone. Groundwater flow direction was toward North-northwest during previous monitoring event in January 2009	Yellow	LUST

19	23504016b	The Koll Company	1420 Koll Circle	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	5/15/1991	The Koll company previously operated one 10,000-gallon UST. The UST was used to store gasoline for business vehicles. In September 1984, the UST was abandoned in place by filling with a cement slurry mixture. Currently, no other UST are known to exist at the site. A Spill Report Form dated December 26, 1985, was completed by the San Jose Fire Department. The spill report indicated that a soil sample taken below the tank contained TPHg. To determine if the reported release had impacted soil and groundwater at the site, soil and groundwater investigation was conducted. Soil samples detected concentrations of TPHg and BTEX. No groundwater contamination was detected. No in-place soil or groundwater remediation has been performed to date. This is a closed LUST site. Residual contamination remains on site. The presence of the backfilled tank may present a physical obstruction.	<u>Soil (mg/kg)</u> TPH = 52 Benzene = 0.65 Toluene = 0.84 Ethylbenzene = 0.31 Xylenes = 0.89  <u>Groundwater (ug/L)</u> Benzene = ND Toluene = ND Ethylbenzene = ND Chlorobenzene = ND 1,2-Dichlorobenzene = ND 1,3-Dichlorobenzene = ND 1,4-Dichlorobenzene = ND	13	North-northwest	Yellow	LUST
20	23727019	San Jose Plating	1575 Terminal Avenue	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	9/13/1996	In 1988, one 500-gallon gasoline tank was removed. A subsequent investigation was performed as part of a facility closure and included three borings and grab groundwater samples. Petroleum hydrocarbons were not detected. It was concluded that there is no indication of significant release associated with the underground storage tank. This is a closed site with minimal residual contaminants remaining on-site. This facility formerly operated as a plating shop. Soil and groundwater sampling for metals was performed at the site; however, no sampling for solvents or hexavalent chromium has been performed.	<u>Soil (mg/kg)</u> TPHg = 30 Benzene = 0.56 Toluene = 2.2 Ethylbenzene = 6.9 Xylenes = 6.9  <u>Groundwater (ug/L)</u> TPHg = ND TPHd = ND Benzene = ND Toluene = ND Xylenes = ND Ethylbenzene = ND	13	No documentation of groundwater flow found in any of the documents in the Santa Clara LOP website	Red	Metal Finishing
21	23503005	Garden State International Trucks, Inc.	1505 North Fourth Street	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	9/6/1995	In 1988 one 500-gallon waste oil tank was removed from the site. Upon removal of the tank holes were discovered at the bottom of the tank. From 1988 to 1995 remedial soil and groundwater activities on the site occurred. Based upon the results of source removal, remedial actions performed, exploratory and monitoring well borings, and verification monitoring, it appears that the extent of the soil contamination has been defined. As of 1995, groundwater contamination exists at the site; however, it is below those levels which currently require active cleanup except for chlorinated hydrocarbon, 1,1-Dichloroethane. The level detected during the last round of sampling in May 1995 data suggests that attenuation is occurring at this site. This is a closed LUST site. Residual contaminants remain on-site. Although a groundwater sample collected in the vicinity of the former waste oil tank did not yield detectable concentrations of chlorinated solvents, the sample was collected in a deeper water bearing zone. A soil sample collected at 15 feet, which is within the shallow water bearing zone, did yield detectable concentrations of PCE. Therefore, the shallow water bearing zone is likely impacted with chlorinated solvents. The extent of such impact is unknown.	<u>Soil (mg/kg)</u> TPHd = 520 TPHmo = 3300 Benzene = 1.4 Toluene = 5.8 Xylene = 14 Ethylbenzene = 2.0 Oil and Grease = 2300 PCE = 0.34 1,1,1-TCA = 0.23 1,1-DCA = ND  <u>Groundwater (ug/L)</u> TPHg = 120 Benzene = ND Toluene = ND Xylenes = 15 Ethylbenzene = 2.5 Oil and Grease = ND PCE = ND 1,1,1-TCA = ND 1,1-DCA = 8.7	4.3 - 12.7	Northwest	Red	LUST

37	23513013	Safety-Kleen Systems, Inc. Service Center	1147 North Tenth Street	SECOR International Incorporated "Quarterly Progress Report April - June 2000 Safety-Kleen Systems, Inc. Service Center 1147 North Tenth Street, San Jose, California, EPA ID No. CAD980817159"	SLIC Open/Inactive	7/26/2000	In October 1992, two aboveground storage tanks which were used to store product and waste mineral spirits were removed from the facility. At that time, mineral spirits and associated volatile organic compounds were detected in the soil approximately 1-foot below the concrete pad. The presence of mineral spirits associated with VOCs in soil prompted an additional subsurface investigation. The investigation results indicated the soil impact appeared to extend to groundwater. In December 1992, approximately 78 gallons of product PCE were released onto the former dock and parking lot located on the east side of the office and warehouse building. Groundwater monitoring program has been implemented since 1993, but the latest groundwater monitoring report is for 2000. Safety-Kleen is adjacent to both BW/IP facility, an open SLIC case and AT-Marine facility, an open LUST case. Based on the investigations conducted on adjacent properties, Safety-Kleen has concluded that the gasoline detected on the west side of the Safety-Kleen facility originate from off-site sources. This is an open/inactive SLIC site.	<u>Groundwater (ug/L)</u> TPHg = 69 TPHms = 126 Benzene = 4.1 Toluene = 4.2 Xylenes = 3.5 MTBE = 11.3 cis-1,2-DCE = 35.2 trans-1,2-DCE = 35.1 TCE = 175 PCE = 15.1 1,1-DCA = 4.3 1,2-DCB = 3.4 1,4-DCB = 1.2 Isopropylbenzene = 3.4 Napthalene = 1.8 tert-Butylbenzene = 4.0 sec-Butylbenzene = 1.8 n-Butylbenzene = 2.5 n-Propylbenzene = 11.0 Acetone = 18	Unknown	Northwest	Yellow	Solvent Recycling
38	23513019	BW/IP International Inc.	1132 North Seventh Street	RWQCB	SLIC Open	5/15/2000	A 1,000-gallon gasoline UST was abandoned in-place by backfilling with concrete slurry. A 550-gallon kerosene UST was removed in 1992. TPH was reported in the surrounding soils. Contaminants identified at the site included petroleum hydrocarbons and chlorinated solvents from onsite and offsite sources. A total of 26 groundwater wells were installed at the site including 9 extraction wells. In 1995, an interim groundwater recovery and treatment system was installed. Permitted discharge of treated groundwater into the storm sewer system began on June 5, 1996 (NPDES Permit No. CAG912003). In 1996, CALTRANS completed the construction of a slurry wall north of the Site to prevent seepage of groundwater directly north of the Site onto Interstate 101. Interim Remedial Action Activities were performed in 1999 including the injection of oxidizing reagents at the source to remediate chlorinated solvents. Based on samples collected following remedial activities, residual impacts are below MCLs. The current status of the site is unknown.	<u>Groundwater (ug/L) (as of 1998 monitoring)</u> TPHg = 1,600 benzene = 49 TCE = <35 cis 1,2-DCE = 630 VC = <35 PCE = <35	Unknown	Variable due to nearby Caltrans extraction wells	Red	Industrial
39	23512011	SCC Office of Education	1245 North Fifth Street	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	5/8/2000	In 1994 one 2,000-gallon gasoline UST was removed from the site. Petroleum hydrocarbons were detected. From 1994 through 1996 groundwater monitoring and remediation of the site took place. This is a closed LUST site. Residual contaminants remain on-site.	<u>Soil (mg/kg)</u> TPHg = 100 Benzene = 0.48 Toluene = 1.13 Ethylbenzene = 2.2 Xylenes = 9.2  <u>Groundwater (ug/L)</u> TPHg = 3600 TPHd = 1300 Benzene = 63 Toluene = 3.4 Xylenes = 130 Ethylbenzene = 77 MTBE = 33 Fuel oxygenates = ND	5.9 - 8.9	North-northwest	Yellow	LUST

40	23512031	Oree Electrical Company	1195 North Fifth Street	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	2/14/1997	One 10,000-gallon diesel/gasoline tank was removed in 1989. TPHg analyses were not performed on soil samples because the tank last stored diesel. However, it is believed that the tank once stored gasoline. Groundwater analyses indicate that the groundwater quality has been affected by diesel and gasoline. The extend of dissolved contamination in the groundwater was not defined downgradient (towards I880) or upgradient. This a closed LUST site with residual contamination left on-site.	<u>Soil (mg/kg)</u> TPHd = 1200 Benzene = 3.3 Toluene = 19 Xylenes = 270 Ethylbenzene = 54  <u>Groundwater (µg/L)</u> TPHg = 530 TPHd = 180 Benzene = 58 Toluene = 1.9 Xylenes = 26 Ethylbenzene = 11 MTBE = 38	4 - 13	North-southwest	Red	LUST
41	23512016	Rollie French Inc.	1191 North Fifth Street	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	12/3/2002	In 1994, the current business that occupied the site was a roofing contractor and was used to store roofing materials and office. Previous businesses were Rollie French Inc. and a bus company. This is a closed LUST site. One 10,000 gallon, single-walled, steel, UST used for gasoline and associated piping were removed from the site on October 8, 1986. Residual contamination remains on-site.	<u>Groundwater (µg/L)</u> TPHg = 542 Benzene = 3.1 Toluene = <0.5 Xylenes = 5.3 Ethylbenzene = 2.5 MTBE = <0.5	9.3 - 17.1	Southwest-northwest	Red	LUST
42	23512008	Babbitt Bearing Manufacturing	1170 North Fifth Street	EDR Report	NA	10/21/2009	The facility is a bearing manufacturer that has operated at this location since approximately 1947. As an industrial facility operating for an extended period, historical solvent and other chemical uses may have impacted underlying soil and groundwater and the existing 60-inch brick sewer immediately southwest of the facility.	NA	Unknown	Unknown	Yellow	Metal Finishing
43	23512019	Eddie's Auto Body	1165 North Fifth Street Suite AA	EDR Report	NA	10/21/2009	Facility is an automobile repair shop. Such facilities frequently used various petroleum and chlorinated solvents. The current status of impacts associated with this facility are unknown.	NA	Unknown	Unknown	Yellow	Auto Repair
43	23512019	Thedy Auto Repair	1169 North Fifth Street	EDR Report	NA	10/21/2009	Facility is an automobile repair shop. Such facilities frequently used various petroleum and chlorinated solvents. The current status of impacts associated with this facility are unknown.	NA	Unknown	Unknown	Yellow	Auto Repair
44	23512026	Commercial Fueling Corporation	1170 North Fourth Street	RRM, Inc. "Groundwater Monitoring and Extraction System Results - Second Quarter 2009"	LUST Open	8/1/2009	Since the 1960 the site has been leased to several independent fuel distributors who operated commercial fueling facilities until 1991. Two 10,000 gallon and one 5,000-gallon underground fuel tanks were removed in March 1992. Open LUST site with continued groundwater monitoring and remediation activities. The groundwater plume appears to extend along North Fourth Street possibly following coarse grained materials within the utility corridor. This plume may impacts alignment alternatives along North Fourth Street.	<u>Groundwater (µg/L)</u> TPHg = 6730 TPHd = 39.66 Benzene = 554 Toluene = 11.19 Xylenes = 22.7 Ethylbenzene = 20.5 MTBE = 6.1	Unknown	North-northwest	Red	LUST
45	23506038	Advanced Surface Finishing	1181 North Fourth Street Suite B	EDR Report	NA	10/21/2009	Based on the facility name, facility may use various solvents. Current environmental status of the facility is unknown.	NA	Unknown	Unknown	Yellow	High Tech
46	23512003	7-Up	297 Commercial Street	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	12/17/1999	Soil and groundwater beneath the site have been impacted by petroleum hydrocarbons. Residual soil contamination of benzene and residual groundwater of benzene exists beneath the site. One 6,000-gallons gasoline tank and two 1,000-gallons diesel and gasoline tanks were removed on May 1988. This is a closed LUST site.	<u>Soil (mg/kg)</u> TPHg = 2400 TPHd = 520 Benzene = 11 Toluene = 15 Ethylbenzene = 310 Xylenes = 1000 Heavy Metals = 18.3  <u>Groundwater (µg/L)</u> TPHg = 2,900 TPHd = ND Benzene = 510 Toluene = 9.6 Xylenes = 12 Ethylbenzene = 44 MTBE = ND	7.2 - 8.7	West to Northwest	Yellow	LUST

 San Jose, California

Figure Identification Number	APN	Site Name	Site Address	Source(s) of Information	Case Status (open / closed)	Date of Latest Information	Site History and Description	Constituents Detected in Soil or Groundwater Concentrations	Approximate Depth to Groundwater (ft bgs unless otherwise noted)	Direction of Groundwater Flow	Site Priority Classification <sup>2</sup>	Site Use Classification
47	23512006	Eastern Electric Apparatus Repair	1138 North Fifth Street	RWQCB	SLIC Open/Inactive	10/22/1996	Sampling of Underground sump separators, as part of closure plan for site, revealed impacts of PCBs, PCE, TCE, oil, and grease. varying levels of PCB's, TCE, oil, and grease in underlying soils. In 1990, tanks, sumps, and soil were excavated. In addition, an outside catch basin was excavated. After excavation, residual chlorinated solvent impacts remained on site. To date, no groundwater sampling has been performed. Given the presence of solvents in soil, there is a high likelihood that chlorinated solvents have impacted groundwater.	Soil (mg/kg) PCE = 160 TCE = 23	Unknown	Unknown	Red	Industrial
48	23509026	Former Phillips Sixty Six Station	1150 North Fourth Street	EDR Report	NA	10/21/2009	The site was listed in 1966 to 1970 as an automotive shop. No information regarding removal of tanks was available. Site may be same as former Beacon site at 1170 North Fourth Street.	NA	Unknown	Unknown	Yellow	Historical Gas Station
49	23507068	Shell Service Station	1120 North First Street	Conestoga-Rovers & Associates "Groundwater Monitoring Report - Second Quarter 2009"	LUST Open	7/31/2009	Environmental assessment activities were initiated at the site in 1985 when laboratory results showed soil and groundwater to be impacted with petroleum hydrocarbons. In 1986 four gasoline underground storage tanks were replaced with three double-walled gasoline tanks in the same excavation. On-going groundwater monitoring have been in place since 1989. Review of the groundwater plume map indicates that it is unlikely that the North Fourth Street alignment is impacted.	Groundwater (ug/L) Benzene = 500 MTBE = 96 TBA = 4000		variable primarily Northerly with a secondary component to the West in the Southwest portion of the site	Green	LUST
50	23517013	Air Cooled Engines	1076 Tenth Street North	RWQCB	SLIC Open/Inactive	6/13/1905	In 1991, one underground 1000 gallon capacity wastewater concrete sump was removed from property. Low levels of hydrocarbons and heavy metals were found in the surrounding soil. TCE was detected in a soil sample. No remedial action has been taken to date. The RWQCB indicated that the source of the TCA appears to be offsite.	Soil (ug/kg) TCA = 81	Unknown	Unknown	Yellow	Industrial
51	23511033	B. L. Cohen Landscape	250 Commercial Street	Santa Clara Valley Water District - Case Closure Summary - Leaking Underground Fuel Storage Tank Program	LUST Closed	5/5/1998	Three USTs, one 5,000-gallon gasoline and one 2,000-gallon diesel were removed from the site in 1987. Soil samples collected at the time of the tank removal from beneath the 2,000-gallon gasoline and diesel tanks contained detectable concentration of TPHg and TPHd. This is a closed LUST site. Residual contamination remains on-site.	Soil (mg/kg) TPHg = 630 TPHd = 390 Benzene = 1 Toluene = 1.2 Ethylbenzene = 6.1 Xylenes = 20  Groundwater (ug/L) TPHg = 290 TPHd = 290 Benzene = 57 Toluene = ND Xylenes = ND Ethylbenzene = 2.6 MTBE = ND 1,2-DCA = 4.9	8.4 - 10.6	Northwest	Yellow	LUST
52	23507069	76 Service Station #5954	1002 North First Street	Delta Consultants "Quarterly Report - First Quarter - 2009"	LUST Closed	11/13/2009	In December 1995 soil samples collected during product line and product dispenser replacement activities detected low levels of fuel hydrocarbons. Detected TPPH, benzene, MTBE, TEPHd and TOG. Groundwater monitoring has been implemented since 2001. The site was recently closed.	Groundwater (ug/L) TPHg = 1700 Benzene = 0.71 Toluene = 0.54 Ethylbenzene = <0.50 Total Xylenes = <1.0 MTBE = 1.5 TBA = 900 Ethanol = <250 EDB = <0.50 1,2-DCA = 6.0 DIPE = <0.50 ETBE = 8.0 TAME = <0.50	Unknown	Variable, primarily Northwest	Green	LUST

53	23518009	Certified Garment & Linen Supply	519 Horning Street	NO FILES IN LOP	SLIC Open/Inactive	NA	Based on a review of permits filed with the City of San Jose, facility operated as an industrial drycleaner from the 1950s into the 1980s. The SLIC summary indicates release occurred from a tank; however, details were not available. The current status of the property is unknown.	Unknown	Unknown	Unknown	Yellow	Dry Cleaning
54	23514006	Consolidated Freightways	390 Commercial Street	Bureau Veritas "Third Quarter 2009 Groundwater Monitoring Report"	LUST Open	9/25/2009	Case is a LUST case related to releases associated with a former 1,000-gallon diesel UST. In addition, chlorinated solvents potentially associated with an onsite sump have been detected in groundwater. In addition to site sources, there are apparently upgradient, downgradient and cross gradient sources of solvents and petroleum hydrocarbons. Chlorinated solvents extent offsite down-gradient of the facility.	Groundwater (ug/L) TPHg = 410 TPHd = 140 Benzene = 1.5 PCE = 25 TCE = 48 cis-1,2-DCE = 250 VC = 12	5.6 - 10.1	Northwest	Yellow	LUST

**Notes**

1. Site number based on location of site in the project area. Lower numbers are in the northwestern portion of the area and higher numbers are in the southeastern portion.
2. Site priority classification based on criteria presented in Section 3 of the report.

**Abbreviations**

mg/kg = milligrams per kilogram	TPH = total petroleum hydrocarbons	PCE = tetrachloroethene
ug/l = micrograms per liter	TPHg = TPH quantified as gasoline	TCE = trichloroethene
NA = not applicable	TPHd = TPH quantified as diesel	1,1-DCE = 1,1-Dichloroethene
GW = groundwater	TPHmo = TPH quantified as motor oil	cis-1,2-DCE = cis-1,2-Dichloroethene
ft bgs = feet below ground surface	TPHms = TPH quantified as mineral spirits	trans-1,2-DCE = trans-1,2-Dichloroethene
AST = aboveground storage tank	TPPH = total purgeable petroleum hydrocarbons	1,1-DCA = 1,1-Dichloroethane
LUST = leaking underground storage tank	TEPH = total extractable petroleum hydrocarbons	1,2-DCB = 1,2-Dichlorobenzene
UST = underground storage tank	TBA = tertiary butyl alcohol	1,4-DCB = 1,4-Dichlorobenzene
APN = assessor's parcel number	TAME = T-amyl methyl ether	VC = vinyl chloride
MCL = maximum contaminant level	MTBE = methyl t-butyl ether	SVOCs = semi-volatile organic compounds
DTSC = California Department of Toxic Substances Control	ETBE = ethyl tert butyl ether	VOCs = volatile organic compounds
RWQCB = Regional Water Quality Control Board, San Francisco Bay Region	EDB = ethyl dibromide	
SLIC = spills, leaks investigations and Cleanup listings	TOG = total oil and grease	
	DIPE = diisopropylether

San Jose, CA 95112

**Client Name:**

AMEC/Geomatrix  
2101 Webster Street  
Oakland, CA 94612

EDR Inquiry # 2619575.3

Contact: Donald Daniels

The complete Sanborn Library collection has been searched by EDR, and fire insurance maps covering the target property location provided by AMEC/Geomatrix were identified for the years listed below. The certified Sanborn Library search results in this report can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn) and entering the certification number. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by Sanborn Library LLC, the copyright holder for the collection.

## Certified Sanborn Results:

**Site Name:** San Jose Sewer Replacement  
**Address:** 4th St btw Commercial and Hwy 101  
**City, State, Zip:** San Jose, CA 95112  
**Cross Street:**  
**P.O. #** 04B60  
**Project:** 14251.000.4  
**Certification #** 9B66-484F-9339

Sanborn® Library search results  
Certification # 9B66-484F-9339

## UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

## Limited Permission To Make Copies

AMEC/Geomatrix (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

## The EDR Aerial Photo Decade Package

# EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

**When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.**

***Thank you for your business.***

# The EDR Historical Topographic Map Report

# EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### TARGET PROPERTY INFORMATION

#### ADDRESS

4TH ST BTW COMMERCIAL AND HWY 101  
SAN JOSE, CA 95112

#### COORDINATES

Latitude (North): 37.365100 - 37° 21' 54.4"  
Longitude (West): 121.908600 - 121° 54' 31.0"  
Universal Transverse Mercator: Zone 10  
UTM X (Meters): 596646.1  
UTM Y (Meters): 4135730.0  
Elevation: 54 ft. above sea level

### USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property Map: 37121-C8 SAN JOSE WEST, CA  
Most Recent Revision: 1980  
  
North Map: 37121-D8 MILPITAS, CA  
Most Recent Revision: 1980

### AERIAL PHOTOGRAPHY IN THIS REPORT

Portions of Photo from: 2006, 2005

### **EDR PROPRIETARY RECORDS**

#### ***EDR Proprietary Records***

Manufactured Gas Plants..... EDR Proprietary Manufactured Gas Plants

### **SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

# EXECUTIVE SUMMARY

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal CERCLIS list***

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 06/30/2009 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>SANMINA-SCI PLANT 20</b>	<b>2068 BERING DR</b>	<b>NW 1/4 - 1/2 (0.430 mi.)</b>	<b>424</b>	<b>574</b>

### ***Federal CERCLIS NFRAP site List***

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/23/2009 has revealed that there are 4 CERC-NFRAP sites within approximately 0.5 miles of the target property.

### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/30/2009 has revealed that there are 4 CORRACTS sites within approximately 1 mile of the target property.

### ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 11/12/2008 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

<b>ULTRA-CHEM C L SCOTT ENTERPRIS</b>	<b>460 REYNOLDS CIR</b>	<b>ENE 0 - 1/8 (0.067 mi.)</b>	<b>141</b>	<b>204</b>

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/12/2008 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>LORAL MICROWAVE NARDA WEST</b>	<b>214 DEVCON DR</b>	<b>NW 1/8 - 1/4 (0.197 mi.)</b>	<b>BW304</b>	<b>397</b>

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/12/2008 has revealed that there are

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 11/12/2008 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent NPL**

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 08/27/2009 has revealed that there are 2 RESPONSE sites within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information

## EXECUTIVE SUMMARY

that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/27/2009 has revealed that there are 19 ENVIROSTOR sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

### **State and tribal landfill and/or solid waste disposal site lists**

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 09/02/2009 has revealed that there are 3 SWF/LF sites within approximately 0.5 miles of the target property.

### **State and tribal leaking storage tank lists**

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 09/05/2009 has revealed that there are 149 LUST sites within approximately 0.5 miles of the target property.

### State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 07/07/2009 has revealed that there are 7 UST

## EXECUTIVE SUMMARY

sites within approximately 0.25 miles of the target property.

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 37 SWEEPS UST sites within approximately 0.25 miles of the target property.

### Local Land Records

DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes .

A review of the DEED list, as provided by EDR, and dated 09/21/2009 has revealed that there is 1 DEED site within approximately 0.5 miles of the target property.

### Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 11/12/2008 has revealed that there are 10 RCRA-NonGen sites within approximately 0.25 miles of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, and dated 09/22/2009 has revealed that there is 1 DRYCLEANERS site within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### EDR PROPRIETARY RECORDS

#### ***EDR Proprietary Records***

EDR Historical Auto Stations: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

A review of the EDR Historical Auto Stations list, as provided by EDR, has revealed that there are 42 EDR Historical Auto Stations sites within approximately 0.25 miles of the target property.

EDR Historical Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.

A review of the EDR Historical Cleaners list, as provided by EDR, has revealed that there are 4 EDR Historical Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Worker: Not reported  
Local Agency: Not reported  
RB Case Number: 43S0985  
File Location: Regional Board  
Potential Media Affected: Not reported

Potential Contaminants of Concern: \* Chlorinated Solvents - PCE

General Comments: Background The site is located at 413 Reynolds Circle located in the Reynolds Circle Industrial Park in San Jose, California. The site is currently vacant and land use in this area is primarily industrial and commercial. A dry cleaner formerly occupied the site and past dry cleaning operations contaminated site soils and groundwater with solvents. Site Investigation Since 2003, environmental investigations have been conducted at the site to determine the amount of solvent contamination present in soil and groundwater. These investigations indicate that the top one to three feet of soil is contaminated with the solvent tetrachloroethene (PCE) and groundwater underneath the site contains the solvent trichloroethene (TCE). Based on concentrations of TCE detected in groundwater and the groundwater flow direction, groundwater contamination is centered in 413 Reynolds Circle and 414 Roberson Lane and does not extend beyond the property boundaries.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Used oil transfer facility: No  
 Used oil transporter: No  
 Off-site waste receiver: Commercial status unknown

Violation Status: No violations found

**FINDS:**

Registry ID: 110013819975

**Environmental Interest/Information System**

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
