SECTION I – BOARD SUMMARY

This report measures assets and liabilities of the City of San José Federated Postemployment Healthcare Plan for funding purposes only. There is a separate report for financial reporting.

Dashboard

The charts above are intended to provide a quick overview of the current valuation results compared to the prior valuation results. The chart on the left shows contributions for FYE 2019 and 2020. The normal cost shown by the black line represents the expected cost of the benefits attributable to the current year of service. All contributions above the normal cost go toward paying off the Unfunded Actuarial Liability (UAL). The Tread Water amount shown by the red line represents the amount needed to pay the normal cost and interest on the UAL. Contributions above the Tread Water line reduce the principal of the UAL.

The chart on the right summarizes the funded status as of the June 30, 2017 and June 30, 2018 actuarial valuations. The stacked bars represent the Actuarial Liability, with the liability for the explicit subsidy broken into separate components for members currently receiving benefits, vested terminated members and active members. The gold bar at the top represents the liability for the implicit subsidy.

More detail and discussion is provided in the sections below.

SECTION I – BOARD SUMMARY

Contributions

There are two components to the benefits under the Plan: the explicit subsidy and the implicit subsidy. The explicit subsidy (or premium subsidy) is paid by the Plan and is the premium for health coverage selected by the retiree, up to 100% of the premium for the lowest cost plan offered to active employees. The implicit subsidy is the difference between the expected claims cost for a retiree or spouse and the total (retiree plus city) premium.

Historically, member and City contributions to the Plan were negotiated through collective bargaining and were not actuarially determined. With the implementation of Measure F, member contributions are fixed at 7.5% of pay; the City’s contribution toward the explicit subsidy is actuarially determined; and, the City also pays the implicit subsidy on a pay-as-you-go basis as a part of active health premiums. Finally, the City has an option to limit its contribution toward the explicit subsidy to 14% of payroll.

Table I-1 shows the contribution amounts for the fiscal years ending in 2019 and 2020.

SECTION I – BOARD SUMMARY

The chart below shows the historical and projected contributions to the Plan. The purple bars represent the member contributions, the gold bars are the City’s contributions to pre-fund the explicit subsidy, and the blue bars are the City contributions to pay the implicit subsidy. The gray area behind the bars represents the projected annual benefit payments. The black line represents the normal cost and the red line is the projection of the total contributions from the 2017 actuarial valuation. The significant reduction in contributions between FYE 2018 and FYE 2019 is due to the implementation of Measure F, including the VEBA elections and the new lowest cost health plan.

Historical and Projected Contributions FYE 2012-2039

Because the Plan is closed to new entrants, the member contributions are expected to decline as current active members retire or otherwise leave active employment with the City. The City’s actuarially determined contribution is expected to increase as the member contributions decrease. The Plan has historically had positive net cash flow, but that is only expected to last for a few more years.

Funded Status

Table I-2 below summarizes the Actuarial Liability, Market Value of Assets, Unfunded Actuarial Liability, and funded percentage for the Plan as of June 30, 2018 compared to June 30, 2017. The Actuarial Liability, including both the explicit and implicit subsidies, increased by 3%, primarily due to premium experience. At the same time, assets increased over 11% due to contributions and investment returns. As a result, the Unfunded Actuarial Liability decreased by about 2.4% and the funded percentage improved from 39.4% to 42.6%.

SECTION I – BOARD SUMMARY

The chart below shows the historical trend of assets and the Actuarial Liability on a funding basis for the City of San José Federated Postemployment Healthcare Plan. The Actuarial Liability grew from 2010 to 2011, reflecting the accumulation of additional benefits as well as rising health care costs and reductions in the discount rate and changes to other assumptions. The reduction in Actuarial Liability from 2011 to 2014 was primarily due to Plan changes and favorable medical cost trend experience, offset by changes in the discount rate. The increase in the Actuarial Liability in 2015 was primarily due to the change in demographic assumptions. The decrease in the Actuarial Liability in 2017 was primarily due to Plan changes and health assumption changes. The Actuarial Liability remained relatively unchanged in 2018.

	2010	2011	2012	2013	2014	2015	2016	2017	2018
Funded Ratio	13.7%	14.5%	18.6%	23.9%	30.0%	29.1%	30.7%	39.4%	42.6%
UAL/(Surplus) (in millions)	\$681.5	\$800.5	\$604.7	\$501.3	\$465.2	\$511.9	\$510.9	\$381.9	\$372.9
Discount Rate	7.95%	7.50%	7.50%	7.25%	7.00%	7.00%	6.875%	6.875%	6.75%

The chart on the following page shows a 20-year projection of assets and Actuarial Liability (AL), and also shows the projected funded percentage for the explicit subsidy. The AL for the implicit subsidy is shown in dark gray while the AL for the explicit subsidy is shown in a lighter gray. If all assumptions are met in the future including an expected return of 6.75% each year, the funded percentage for the explicit subsidy is expected to exceed 100% by 2038.

Changes Since the Prior Valuation

Table I-3 below breaks out the sources of the changes in UAL for the fiscal year ending June 30, 2018. The total UAL decreased about \$9 million since the prior year. The explicit subsidy UAL decreased \$13 million and the implicit subsidy UAL increased \$4 million.

SECTION I – BOARD SUMMARY

The primary sources of the reduction in the UAL were contributions (\$15.6 million) and plan experience (\$10.4 million). The experience changes were mainly driven by the lower than expected increases in the Medicare eligible premium rates. Assumption changes increased the UAL by about \$9.3 million, primarily due to the discount rate and health trend changes. Investment experience and the additional assets transferred to the VEBA increased the UAL by about \$8 million.

SECTION II – CERTIFICATION

The purpose of this report is to present the annual actuarial valuation of the City of San José Federated Postemployment Healthcare Plan. This report is for the use of the Board in setting actuarially determined amounts for the City to contribute to the Plan. There is a separate report for accounting and financial reporting under GASB Statements 74 and 75.

In preparing our report, we relied on information, some oral and some written, supplied by the Plan. This information includes, but is not limited to, the Plan provisions, employee data, and financial information. We performed an informal examination of the obvious characteristics of the data for reasonableness and consistency in accordance with Actuarial Standard of Practice No. 23.

The health assumptions and discount rate assumption were adopted by the Board of Administration at the December 20, 2018 Board meeting based upon our recommendations. All other assumptions in this report were adopted at the November 19, 2015 Board meeting based on recommendations from our Experience Study covering Plan experience during the period from July 1, 2010 through June 30, 2015. Please refer to the experience study report and our Board presentations for an explanation of the rationale for each assumption.

The liability measures and funding ratios in this report are for the purpose of establishing contribution amounts. These measures are not appropriate for assessing the sufficiency of Plan assets to cover the estimated cost of settling the Plan's benefit obligations.

Future actuarial measurements may differ significantly from the current measurements due to such factors as the following: Plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; and, changes in Plan provisions or applicable law.

To the best of our knowledge, this report and its contents have been prepared in accordance with generally recognized and accepted actuarial principles and practices that are consistent with the Code of Professional Conduct and applicable Actuarial Standards of Practice set out by the Actuarial Standards Board. Furthermore, as credentialed actuaries, we meet the Qualification Standards of the American Academy of Actuaries to render the opinion contained in this report. This report does not address any contractual or legal issues. We are not attorneys, and our firm does not provide any legal services or advice.

This report was prepared for the Board for the purposes described herein. Other users of this report are not intended users as defined in the Actuarial Standards of Practice, and Cheiron assumes no duty or liability to any other user.

SECTION III – ASSETS

Assets are invested in two separate trust vehicles: a 401(h) account within the pension plan and a separate 115 Trust. All contributions are now made to the 115 Trust while benefit payments are currently being made from the 401(h) account.

Statement of Change in Market Value of Assets

Table III-1 below shows the changes in the Market Value of Assets for the last two fiscal years. The implicit subsidy is shown as both a contribution and a payment from the Plan, but it is not actually contributed to the trust or paid from the trust. It is just paid directly by the City as a part of active health plan premiums.

SECTION IV – MEASURES OF LIABILITY

This section presents detailed information on liability measures for the Plan for funding purposes, including:

- Projected Benefit Payments,
- Present value of future benefits,
- Normal cost, and
- Actuarial Liability.

Projected Benefit Payments: The projected benefit payments are the fundamental basis for the valuation representing the amount that is expected to be paid in each future year for members in the Plan as of the valuation date if all assumptions are met. Table IV-1 below shows the expected net benefit payments for the next 20 years. These payments include the expected annual implicit subsidy as well as expected Plan premium payments (the explicit subsidy).

SECTION IV – MEASURES OF LIABILITY

Present Value of Future Benefits: The present value of future benefits represents the expected amount of money needed today if all assumptions are met to pay for all benefits both earned as of the valuation date and expected to be earned in the future by current Plan members under the current Plan provisions. Table IV-2 below shows the present value of future benefits as of June 30, 2018 and June 30, 2017.

Normal Cost

Under the Entry Age (EA) actuarial cost method, the present value of future benefits for each individual is spread over the individual's expected working career as a level percentage of the individual's expected pay. The normal cost rate is determined by taking the value, as of entry age into the Plan, of each member's projected future benefits divided by the value, also at entry age, of the each member's expected future salary. The normal cost rate is multiplied by current salary to determine each member's normal cost. The normal cost of the Plan is the sum of the normal costs for each individual. The normal cost represents the expected amount of money needed to fund the benefits attributed to the next year of service under the Entry Age actuarial cost method. Table IV-3 on the next page shows the EA normal cost as of June 30, 2018 and June 30, 2017 separately by component.

Actuarial Liability

The Actuarial Liability represents the expected amount of money needed today, if all assumptions are met, to pay for benefits attributed to service prior to the valuation date under the Entry Age actuarial cost method. As such, it is the amount of assets targeted by the actuarial cost method for the Plan to hold as of the valuation date. It is not the amount necessary to settle the obligation. Table IV-4 below shows the Actuarial Liability as of June 30, 2018 and June 30, 2017 separately by component.

SECTION V – CONTRIBUTIONS

Amortization of the Unfunded Actuarial Liability

Under the contribution allocation procedure employed by the Plan, there are two components to the contribution toward the explicit subsidy: the normal cost and an amortization payment on the Unfunded Actuarial Liability (UAL). The normal cost was developed in Section IV. This section develops the UAL contribution and the City’s actuarially determined contribution for the explicit subsidy. The implicit subsidy is funded on a pay-as-you-go basis through the payment of active health premiums.

The difference between the Actuarial Liability and the Market Value of Assets is the Unfunded Actuarial Liability (UAL). Table V-1 calculates the UAL and funded percentage for the explicit subsidy and the implicit subsidy.

The UAL for the explicit subsidy as of June 30, 2017 is amortized as a level dollar amount over 20 years. Future amortization bases will be phased in and out over three years. Table V-2 below shows the schedule of amortization bases for payment of the UAL.

SECTION V – CONTRIBUTIONS

Contribution Amounts

The City pays the actuarially determined contribution for the explicit subsidy, but has the option to cap its contribution at 14% of Federated payroll, including the payroll for members covered by the VEBA instead of this Plan. The actuarially determined contribution is the normal cost plus the amortization payment on the UAL less expected member contributions. Members contribute 7.50% of pay.

Table V-3 shows the components of the Actuarially Determined Contribution (ADC) amounts for the explicit subsidy for FYE 2020 and 2019.

SECTION VI – ACTUARIAL SECTION OF THE CAFR

The Government Finance Officers Association (GFOA) maintains a checklist of items to be included in the Plan’s Comprehensive Annual Financial Report (CAFR) in order to receive recognition for excellence in financial reporting. The schedules in this section are listed by the GFOA for inclusion in the Actuarial Section of the Plan’s CAFR. All amounts prior to June 30, 2010 were calculated by the prior actuary.

Table VI-1 was previously referred to as the Solvency Test by the Government Finance Officers Association (GFOA). It should be noted, however, that it does not test the solvency of the Plan in the sense understood by financial economists in that a 100 percent ratio would mean that there were sufficient assets to settle the obligation on the valuation date. Instead, a 100 percent ratio only means that assets are expected to be sufficient if all assumptions are met in the future, including the expected rate of return on investments. Consequently, we understand that the new GFOA checklist refers to the exhibit providing member benefit coverage information.

Schedule of Funding Progress

The schedule of funding progress compares the assets used for funding purposes to the comparable liabilities to determine how well the Plan is funded and how this status has changed over the past several years. The Actuarial Liability is compared to the Actuarial Value of Assets to determine the funding ratio.

APPENDIX B – ACTUARIAL ASSUMPTIONS AND METHODS

Economic Assumptions

The expected return on Plan assets and per person cost trend assumptions shown below were adopted by the Board of Administration with our input at the December 20, 2018 Board meeting.

1. Expected Return on Plan Assets

6.75% per year. The Board expects a long-term rate of return of 6.8% based on Mekteta’s 20-year capital market assumptions and the System’s current investment policy.

2. Per Person Cost Trends

To Calendar Year	Annual Increase		
	Pre- Medicare	Medicare Eligible	Dental
2020	8.00%	6.00%	3.50%
2021	7.73	5.88	3.50
2022	7.46	5.75	3.50
2023	7.20	5.63	3.50
2024	6.93	5.50	3.50
2025	6.66	5.38	3.50
2026	6.39	5.25	3.50
2027	6.13	5.13	3.50
2028	5.86	5.00	3.50
2029	5.59	4.88	3.50
2030	5.32	4.75	3.50
2031	5.05	4.63	3.50
2032	4.79	4.50	3.50
2033	4.52	4.38	3.50
2034+	4.25	4.25	3.50

Actual premium increases for 2019 were reflected with the above rates applying after 2019. Deductibles, Co-payments, Out-of-Pocket Maximums, and Annual Maximum (where applicable) are assumed to increase at the above trend rates.

3. Changes Since Last Valuation

The expected return on Plan assets was lowered from 6.875% to 6.75%.

Plan enrollment assumptions were updated based on recent experience and the expected impact of added and dropped plans. The per-person cost trends were updated.

Demographic Assumptions

The Plan election assumptions were adopted by the Board of Administration at the December 20, 2018 Board meeting based on our recommendations. The other demographic assumptions shown below were adopted at the November 19, 2015 Board meeting based on recommendations from our experience study covering Plan experience during the period from July 1, 2010 through June 30, 2015. Please refer to the full experience study report for details, including the rationale for each assumption.

1. Retirement Rates

Rates of retirement for Tier 1 members are based on age according to the following Table – Tier 1.

4. Rates of Mortality

Mortality rates for actives, retirees, beneficiaries, terminated vested, and reciprocals are based on the sex-distinct employee and annuitant CalPERS mortality tables as described below. The CalPERS tables are from their 2014 experience study with a central experience year of 2009 and prior to the 20-year projection of those rates using Scale BB. Future mortality improvements are reflected by applying the most recent projection scale issued by the Society of Actuaries on a generational basis from the base year of 2009. The projection scale used for this valuation is MP-2018.

Base Mortality Tables		
Category	Male	Female
Healthy Annuitant	0.952 times the CalPERS 2009 Healthy Annuitant Mortality Table (Male)	0.921 times the CalPERS 2009 Healthy Annuitant Mortality Table (Female)
Healthy Non-Annuitant	0.919 times the CalPERS 2009 Employee Mortality Table (Male)	0.918 times the CalPERS 2009 Employee Mortality Table (Female)
Disabled Annuitant	1.051 times the CalPERS 2009 Ordinary Disability Mortality Table (Male)	1.002 times the CalPERS 2009 Ordinary Disability Mortality Table (Female)

7. Percent of Retirees Electing Coverage

85% of active members are assumed to elect coverage upon retirement and 15% are assumed to enter the In-Lieu credit program. 50% of term vested members are assumed to elect coverage upon retirement and 50% are assumed to enter the in-Lieu credit program. Retirees are assumed to continue in their current plan.

Members who elect to receive the In-Lieu credits are assumed to remain in the In-Lieu credit program for five years, after which they are assumed to elect coverage and use their In-Lieu credits.

A new, Sutter Health Vista High Deductible plan will be offered as of 1/1/2019.

Retirees who are not yet age 65 are assumed to be eligible for Medicare when they reach age 65 and are assumed to enroll in the Medicare-eligible plan corresponding to their current Pre-Medicare plan election. Future retirees are assumed to elect plans in the proportion shown in the table below.

8. Family Composition

85% of married males and 70% of married females will elect spouse coverage in a medical plan at retirement. 100% of employees with a spouse will elect spouse coverage in a dental plan at retirement.

Pre-Medicare, 31% of males and 21% of females will cover children.

9. Dependent Age

For current retirees, actual spouse date of birth was used when available. For future retirees, male retirees are assumed to be three years older than their partner, and female retirees are assumed to be two years younger than their partner.

10. Married Percentage

APPENDIX B – ACTUARIAL ASSUMPTIONS AND METHODS

Claim and Expense Assumptions

The claim and expense assumptions shown below were adopted by the Board of Administration at the December 20, 2018 Board meeting based upon our recommendations.

The claims costs are based on the fully insured premiums charged to the City for the active and retiree population in 2018 and 2019. For non-Medicare adults, the premiums for each coverage tier (retiree only, retiree plus spouse, retiree plus child(ren) and retiree plus family) were blended based on enrollment data for the 2018 calendar year. The same process was used for Medicare adults, except only Medicare-eligible retirees were included. The resulting per person per month (PPPM) cost was then adjusted using age curves. The pre-Medicare adult claims curves were then loaded for the cost of children; the load for children decreases by retiree age since older retirees have fewer children. The impact of children on Medicare costs was assumed to be de minimis. All claims costs are developed separately for the Federated, Police, and Fire Postemployment Healthcare Plans of the City of San José.

This report does not reflect future changes in benefits, penalties, taxes, or administrative costs that may be required as a result of the Patient Protection and Affordable Care Act of 2010, related legislation, or regulations.

1. Average Annual Claims and Expense Assumptions

The following claim and expense assumptions were developed as of July 1, 2018 based on the premiums for 2018 and 2019. The explicit subsidy amount (100% of the premium for the lowest cost health plan available to active City employees) is assumed to grow based on the Pre-Medicare cost trend rates.

The following tables show the claims costs for each medical plan as of the valuation date:

6. Lifetime Maximums

Are not assumed to have any financial impact.

7. Geography

Implicitly assumed to remain the same as current retirees.

8. Retiree Contributions

Retirees pay the difference between the actual premium for the elected medical plan and the lowest cost medical plan available to active members, if the retiree is eligible to receive the explicit subsidy. No retiree contributions are required for dental.

9. Changes Since Last Valuation

All claims costs are developed separately for the Federated, Police, and Fire Postemployment Healthcare Plans of the City of San José.

APPENDIX B – ACTUARIAL ASSUMPTIONS AND METHODS

Contribution Allocation Procedure

The contribution allocation procedure primarily consists of an actuarial cost method, an asset smoothing method, and an amortization method as described below.

1. Actuarial Cost Method

The Entry Age actuarial cost method was used for active employees, whereby the normal cost is computed as the level annual percentage of pay required to fund the retirement benefits between each member's date of hire and assumed retirement. The Actuarial Liability is the difference between the present value of future benefits and the present value of future normal costs. Or, equivalently, it is the accumulation of normal costs for all periods prior to the valuation date. The normal cost and Actuarial Liability are calculated on an individual basis. The sum of the individual amounts is the normal cost and Actuarial Liability for the Plan. The Actuarial Liability for the Plan represents the target amount of assets the Plan should have as of the valuation date according to the actuarial cost method.

2. Asset Valuation Method

The Actuarial Value of Assets equals the Market Value of Assets.

3. Amortization Method

The Unfunded Actuarial Liability is the difference between the Actuarial Liability and the Actuarial Value of Assets. The Unfunded Actuarial Liability as of June 30, 2017 is amortized as a level dollar amount over a closed 20-year period. All future amortization bases will be amortized over 20-year periods with a 3-year phase-in and phase-out.

4. Contributions

The City will contribute the annual implicit subsidy as part of active employee health premiums and will prefund the explicit subsidy based on the normal cost and amortization payment described above less expected employee contributions. The City has the option to limit its contribution towards the explicit subsidy to no more than 14% of total payroll.

Active members that are eligible for full benefits will contribute 7.50% of pay.

5. Changes Since Last Valuation

None.

APPENDIX C – SUMMARY OF PLAN PROVISIONS

POSTEMPLOYMENT HEALTHCARE PLAN

Eligibility: Employees hired before September 2013 that did not elect to opt-in to the Voluntary Employees' Beneficiary Association (VEBA).

Medical: Employees who retire (include deferred vested members) with at least 15 years of service with the City ("OPEB benefit service"), or with a monthly pension equal to at least 37.5% of final compensation, are eligible to elect medical coverage upon retirement. Tier 1 employees (hired before September 30, 2012) are eligible for retirement at age 55 with five years of service or at any age with 30 years of service. Tier 2 employees (hired on or after September 30, 2012) are eligible for unreduced service retirement at age 65 with five years of service or reduced service retirement at age 55 with five years of service. Service credited thru reciprocity agreements counts towards an employee's required service to retire, but only service with the City counts towards the required years of service to receive OPEB benefits. Employees who retire with less than 15 years of service can elect coverage, but receive no explicit subsidy.

Employees who become disabled with at least 15 years of service or have a monthly pension equal to at least 37.5% of final compensation are eligible to elect medical coverage upon retirement.

Spouses or domestic partners of retired members are allowed to participate if they were enrolled in the City's medical plan at the time of the member's retirement. Dependent children are eligible to receive coverage until the age of 26.

Surviving spouses/domestic partners/children of deceased members are eligible for coverage if the following conditions are met:

1. The employee has 15 years of service at time of death or is entitled to a monthly pension of at least 37.5% of final compensation; and,
2. Both the member and the survivors were enrolled in the active medical plan immediately before death; and,
3. The survivor will receive a monthly pension benefit.

Dental: Employees who retire or become disabled directly from City service with at least five years of service or with a monthly pension equal to at least 37.5% of final compensation, and are enrolled in a City dental plan at retirement are eligible to elect dental coverage upon retirement. Spouses, domestic partners, or children of retired members are allowed to participate if they were enrolled in the City's dental plan at the time of the member's retirement.

Surviving spouses/domestic partners/children of deceased members are eligible for coverage if the following conditions are met:

1. The employee has five years of service at time of death or is entitled to a monthly pension of at least 37.5% of final compensation; and,
2. Both the member and the survivors were enrolled in the active dental plan immediately before death; and,
3. The survivor will receive a monthly pension benefit.

Benefits for Retirees:

Medical: The Plan, through either the 401(h) account or 115 trust, pays 100% of the premium for the lowest cost health plan available to active City employees. The member pays the difference if another plan is elected.

Dental: The Plan, through either the 401(h) account or 115 trust, pays 100% of the dental insurance premiums.

APPENDIX C – SUMMARY OF PLAN PROVISIONS

Cost-Sharing Provisions:

It is assumed for the purpose of this valuation that the City of San José will in the future maintain a consistent level of cost sharing for benefits with the retirees. This may be achieved by adjusting benefit provisions, contributions or both.

APPENDIX C – SUMMARY OF PLAN PROVISIONS

VOLUNTARY EMPLOYEES' BENEFICIARY ASSOCIATION (VEBA)

Eligibility: Employees who elected to opt-in to the Voluntary Employees' Beneficiary Association (VEBA).

Contributions: Employees are required to make mandatory contributions into the VEBA on a pre-tax basis.

Medical: VEBA funds can be used to reimburse members for eligible healthcare expenses.

VEBA members on service-connected disability will receive benefits from the Postemployment Healthcare Plan only up to age 65 once VEBA funds are exhausted.

Note: The summary of major plan provisions is designed to outline principal plan benefits. If the Department of Retirement Services should find the plan summary not in accordance with the actual provisions, the actuary should immediately be alerted so the proper provisions are valued.

APPENDIX D – GLOSSARY OF TERMS

1. Actuarial Assumptions

Assumptions as to the occurrence of future events affecting pension costs, such as: mortality, withdrawal, and retirement; changes in compensation; rates of investment earnings, and asset appreciation or depreciation; procedures used to determine the Actuarial Value of Assets; and, other relevant items.

2. Actuarial Cost Method

A procedure for determining the actuarial present value of pension plan benefits and expenses and for developing an allocation of such value to each year of service, usually in the form of a normal cost and an Actuarial Liability.

3. Actuarial Gain (Loss)

A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, as determined in accordance with a particular actuarial cost method.

4. Actuarial Liability

The portion of the actuarial present value of projected benefits that will not be paid by future normal costs. It represents the value of the past normal costs with interest to the valuation date.

5. Actuarial Present Value (Present Value)

The value as of a given date of a future amount or series of payments. The actuarial present value discounts the payments to the given date at the assumed investment return and includes the probability of the payment being made. As a simple example: assume you owe \$100 to a friend one year from now. Also, assume there is a 1% probability of your friend dying over the next year, in which case you will not be obligated to pay him. If the assumed investment return is 10%, the actuarial present value is:

$$\begin{array}{rcccl}
 \text{Amount} & & \text{Probability} & \frac{1}{(1+\text{Discount Rate})} & \\
 \$100 & \times & (1 - .01) & 1/(1+.1) & = \$90
 \end{array}$$

6. Actuarial Valuation

The determination, as of a specified date, of the normal cost, Actuarial Liability, Actuarial Value of Assets, and related actuarial present values for a pension plan.

7. Actuarial Value of Assets

The value of cash, investments, and other property belonging to a pension plan as used by the actuary for the purpose of an actuarial valuation. The purpose of an Actuarial Value of Assets is to smooth out fluctuations in market values. This way long-term costs are not distorted by short-term fluctuations in the market.

APPENDIX D – GLOSSARY OF TERMS

8. Amortization Payment

The portion of the pension plan contribution, which is designed to pay interest and principal on the Unfunded Actuarial Liability in order to pay for that liability in a given number of years.

9. Entry Age Normal Actuarial Cost Method

A method under which the actuarial present value of the projected benefits of each individual included in an actuarial valuation is allocated as a level percentage of pay from the individual's date of entry into the plan to the individual's assumed cessation of employment.

10. Normal Cost

That portion of the actuarial present value of pension plan benefits and expenses which is allocated to a valuation year by the actuarial cost method.

11. Unfunded Actuarial Liability

The excess of the Actuarial Liability over the Actuarial Value of Assets.

12. Funded Percentage

The ratio of the Actuarial Value of Assets to the Actuarial Liability.

13. Mortality Table

A set of percentages that estimate the probability of death at a particular point in time. Typically, the rates are annual and based on age and sex.

14. Discount Rate

The assumed interest rate used for converting projecting dollar related values to a present value as of the valuation date.

15. Medical Trend

The assumed increase in dollar related values in the future due to the increase in the cost of health care.
