Subject: I support safe bird design

Honorable San Jose City Council Members,

Please, resist the pressure to turn every square inch of this beautiful place on earth into a concrete jungle designed solely for short-sighted humans. I strongly support the relentless protection of our precious wildlife and open space.

Let's think beyond the dollar and protect what gives us a high quality of life now and into the future.

Sincerely,

Kit O'Doherty

Subject: Please support Bird-Safe Design for San Jose

Dear Mayor and Council members

Please do make San Jose safer for what we all love, birds. A city with dead birds dying by breaking heir necks on glassy buildings is a sad city.

- **Please support bird-safe design**, like San Francisco, Chicago, Paris and other great cities.

Thank you so much for all that you do for San Jose.

Gita Dev

Subject: Safe Bird Design

Dear Council Members,

I am writing to let you know that I support sage bird design. In a time when we are hearing about extinction of so many species, it is time to pay more heed to safe bird design.

Thanks for supporting the birds!

Best regards,

Janet Walworth

Up to one one billion birds die *each year* in the United States when they hit glass windows, walls, and other structures, making this threat one of the most costly to bird populations.

But it's also a relatively easy problem to solve. We've made it even easier by evaluating and rounding up a list of products shown to reduce collisions on glass. Please have a look at the options below for homeowners and architects.

We present these products in two categories: (1) Those that have been tunnel tested by ABC and received a score of 70 or higher. These products are denoted with ABC's 'Saves Birds' logo. (2) "Also Recommended" products that were tested using other, peer-reviewed protocols that we deem sufficient, or which have been shown by experienced monitors to demonstrate a significant reduction in collisions. Learn more about ABC's ratings.

Looking for more do-it-yourself home solutions? Check out our Bird-friendly Windows Flyer. Have more questions? Check out our comprehensive FAQ post.

(Note: No window product, including ABC-tested products, can guarantee elimination of window collisions. Results will vary depending on local bird populations, landscape conditions, product used, and building design. In addition, ratings assume that patterns are applied to the outside surface of glass, or that surface reflections do not obscure the pattern.)

HOMEOWNER PRODUCTS

ABC BirdTape –

Estimated Cost: \$3 per 24" x 32" window

Easy to install, long-lasting and affordable, ABC BirdTape is highly effective when installed as recommended. This translucent tape allows light in, but partially obscures views. Lasts at least four years when installed on the exterior surface of a window.

Acopian BirdSavers –

Estimated DIY Cost: \$2 per 24" x 32" window

These "Zen Curtains" are easy to install, long lasting and highly effective. The BirdSavers website gives directions to build your own, or order from them from Acopian BirdSavers.

Bird Crash Preventer –

Estimated Cost: \$27.95 for 36" width / \$29.95 for 48" width

The Bird Crash Preventer is a ready-to-hang "curtain" of fine nylon monofilament lines. Brackets and screws included for self installation. Available in white and brown finish, 36" or 48" wide. Height adjusts 0" – 84". Reduces collisions with only minor impact on view.

Evonik Soundstop Birdguard –

Estimated Cost: \$10 per 24" x 32" window

Soundstop, generally used for noise barriers and handrails in outdoor settings, comes in two versions that are good choices for bird-friendly applications.

Feather Friendly® DIY –

Estimated Cost: \$10 per 24" x 32" window

These adhesive dots applied to the outside of your windows create an effective "frit" pattern. Do-it-yourself or have professionally installed.

Solyx® Bird-Safety Film –

Estimated Cost: \$31 per 24" x 32" window

Do-it-yourself or have professionally installed.

White Collidescape

Estimated Cost: \$36 per 24" x 32" window

This window film creates a solid appearance from the outside, but allows views from the inside and can reduce glare and cooling costs while protecting birds. Do it yourself or have professionally installed.

ARCHITECTURAL PRODUCTS

Bird-friendly design should not increase project costs if it is considered from the outset of the design process, as outlined in [Bird-friendly Building Design](#).

Legislation and guidelines in over a dozen jurisdictions, with more pending, mandate or encourage bird-friendly design, and the materials listed here satisfy their [requirements](#). They can also assist designs intended to earn the USGBC LEED™ Pilot Credit 55: Bird Collision Deterrence.

Thank you for your attention to this problem and these and more solutions!!

Subject: City of San Jose Safe Bird Design

When the San Jose City Council considers design standards for buildings they should adopt "Safe Bird Design" standards. Birds have a hard enough time surviving in our urban environment without having to deal with buildings designed just to be cheap and pretty.

I agree with the planning commission recommendations such as:

Reducing large areas of transparent or reflective glass.

Locating water features and other bird habitat away from building exteriors to reduce reflection.

Reducing or eliminating the visibility of landscaped areas behind glass.

Reducing or eliminating spotlights on buildings.

Turning off non-emergency lighting at night during bird migration season.

Thanks,

Randy Scott

Patty Linder

COMMITTEE FOR
GREEN FOOTHILLS

May 18, 2019

Re: Item 4.3 – San José Downtown Design Guidelines and Standards: Environmental Groups Support for Staff Recommendations

Dear Mayor Liccardo and San Jose Council Members,

The Sierra Club Loma Prieta Chapter, the Santa Clara Valley Audubon Society, the Committee for Green Foothills, the South Bay Clean Creeks Coalition, Greenbelt Alliance, Keep Coyote Creek Beautiful, the Citizens Committee to Complete the Refuge and Mothers Out Front South Bay are non-profit organizations with thousands of members and supporters in San Jose. Our organizations care deeply about environmental health and about creek corridors and their ecosystems, and we engage in conservation, education and restoration activities that bring people to learn, clean, and enjoy the watersheds of San Jose.

At your April 23rd meeting, Council directed staff to continue working on the Bird-Safe Design section of the San José Downtown Design Guidelines and Standards (Section

4.4.2). We commend staff on their work to draft Guidelines and Standards that offer protection to birds along downtown creek corridors. Recognizing that this is a compromise, we thank staff – especially planners Tim Rood and Leila Hakimizadeh - for their sincere effort and diligence. We hope that you vote in support of staff recommendations.

This should be a step forward in protecting the birds along San Jose’s watersheds and allowing them to persist in the riparian corridors of the City, for the benefit of all residents.

Sincerely

Katja Irvin,
