City Clerk Toni Taber,

Dear members of the City of San José's Planning Commission and City Council,

I am a resident of San José and I am reaching out to you today, in advance of the upcoming Planning Commission and City Council meetings in June, about the parking standards and transportation demand management ordinance.

I urge you to adopt the staff recommendation to prepare an ordinance that removes mandatory minimum parking limits, updates the City's Transportation Demand Management (TDM) requirements to apply to all projects meeting a certain size threshold, and develops a program for ongoing monitoring and compliance for the citywide TDM program.

The City of San José has adopted an ambitious plan to become carbon neutral by 2030 but with 50% of greenhouse gas emissions coming from private vehicles in the City, updating parking standards as well as new transportation demand management (TDM) requirements needs to be a clear part of this plan citywide.

I want a San José that is:

- More affordable: by reducing the overbearing costs of producing parking—which is passed on to residents—and, in turn, having more land and resources to make housing more affordable to residents.

- More sustainable: by allowing the community to determine how much parking is appropriate, you can prevent the oversupply of parking and promote a better quality urban environment. This policy reform can reduce reliance on cars and mitigate greenhouse gas emissions and pollution, while also incentivizing more sustainable modes and options of mobility.

- More equitable: minimum parking requirements mean that even car-free households end up paying for parking they don't use and end up driving up housing costs. The Transportation Demand Management (TDM) policies are a critical way to increase access to transportation and reduce the reliance on cars, allowing people to have more affordable transportation options.

San José has been a climate leader and I hope you continue to lead in this direction by taking bold action to disincentivize single-occupancy car trips, reduce GHG emissions, and increase affordable housing. The laws you have put in place requiring all-electric energy in new construction, and electric vehicle charging stations at residential buildings might not have the

Dear members of the City of San José's Planning Commission and City Council,

I am a resident of San José and I am reaching out to you today, in advance of the upcoming Planning Commission and City Council meetings in June, about the parking standards and transportation demand management ordinance.

I urge you to adopt the staff recommendation to prepare an ordinance that removes mandatory minimum parking limits, updates the City's Transportation Demand Management (TDM) requirements to apply to all projects meeting a certain size threshold, and develops a program for ongoing monitoring and compliance for the citywide TDM program.

The City of San José has adopted an ambitious plan to become carbon neutral by 2030 but with 50% of greenhouse gas emissions coming from private vehicles in the City, updating parking standards as well as new transportation demand management (TDM) requirements needs to be a clear part of this plan citywide.

I want a San José that is:

- More affordable: by reducing the overbearing costs of producing parking—which is passed on to residents—and, in turn, having more land and resources to make housing more affordable to residents.

- More sustainable: by allowing the community to determine how much parking is appropriate, you can prevent the oversupply of parking and promote a better quality urban environment. This policy reform can reduce reliance on cars and mitigate greenhouse gas emissions and pollution, while also incentivizing more sustainable modes and options of mobility.

- More equitable: minimum parking requirements mean that even car-free households end up paying for parking they don't use and end up driving up housing costs. The Transportation Demand Management (TDM) policies are a critical way to increase access to transportation and reduce the reliance on cars, allowing people to have more affordable transportation options.

San José has been a climate leader and I hope you continue to lead in this direction by taking bold action to disincentivize single-occupancy car trips, reduce GHG emissions, and increase affordable housing. The laws you have put in place requiring all-electric energy in new construction, and electric vehicle charging stations at residential buildings might not have the

Dear Mayor and City Council,

The Washington/Guadalupe community has struggled with gangs, crime, drugs, obesity, and health problems related to poverty for decades. We know that the best solution for these critical problems is building resilience within low-income minority communities of color. Because of our longstanding commitment to Silicon Valley, we are pleased to support the efforts of Healing Grove Health Center and Project: Activate (https://healinggrove.org/activate).

We're calling for the City of San Jose to partner with the Washington Community and Healing Grove to find creative solutions to repair the Tamien Park soccer field by installing artificial turf funded by the generosity of a local donor. We're calling for the City of San Jose to partner with

Healing Grove to bring enhanced community programming to the Washington United Youth Center. We're calling for San Jose Unified to open the Washington Elementary artificial turf soccer field to community use after school and on weekends (it is currently closed to the public against SJUSD policy).

It's important that both Tamien Park and the Youth Center have active daily programming that is prioritized and targeted for Spanish-speaking youth and families that live in the immediate

Washington/Guadalupe/Tamien/Alma communities. While these beautiful resources can and should serve the larger city, the first priority should go to serving the local low-income Washington community with programs run by local leaders. Healing Grove has assembled a team of local Spanish-speaking leaders that live and serve in the community that is committed to serving the children, youth, and families of the Washington community. We're encouraging the City of San Jose and PRNS to partner with Healing Grove and their team to find creative solutions to barriers of access to City-owned facilities and parks in order to promote the future of public safety in our community.

Sincerely,

Jenn Tran

City Clerk Toni Taber,

Dear members of the City of San José's Planning Commission and City Council,

I am a resident of San José and I am reaching out to you today, in advance of the upcoming Planning Commission and City Council meetings in June, about the parking standards and transportation demand management ordinance.

I urge you to adopt the staff recommendation to prepare an ordinance that removes mandatory minimum parking limits, updates the City's Transportation Demand Management (TDM) requirements to apply to all projects meeting a certain size threshold, and develops a program for ongoing monitoring and compliance for the citywide TDM program.

The City of San José has adopted an ambitious plan to become carbon neutral by 2030 but with 50% of greenhouse gas emissions coming from private vehicles in the City, updating parking standards as well as new transportation demand management (TDM) requirements needs to be a clear part of this plan citywide.

I want a San José that is:

- More affordable: by reducing the overbearing costs of producing parking—which is passed on to residents—and, in turn, having more land and resources to make housing more affordable to residents.

- More sustainable: by allowing the community to determine how much parking is appropriate, you can prevent the oversupply of parking and promote a better quality urban environment. This policy reform can reduce reliance on cars and mitigate greenhouse gas emissions and pollution, while also incentivizing more sustainable modes and options of mobility.

- More equitable: minimum parking requirements mean that even car-free households end up paying for parking they don't use and end up driving up housing costs. The Transportation Demand Management (TDM) policies are a critical way to increase access to transportation and reduce the reliance on cars, allowing people to have more affordable transportation options.

San José has been a climate leader and I hope you continue to lead in this direction by taking bold action to disincentivize single-occupancy car trips, reduce GHG emissions, and increase affordable housing. The laws you have put in place requiring all-electric energy in new construction, and electric vehicle charging stations at residential buildings might not have the intended impact if the legislation is still incentivizing driving through the requirement of minimum parking. I am counting on you to vote in support of this policy!

Sincerely,

RE: 6/14 City Council Item 10.3 Adopting a Comprehensive Parking Policy and TDM Ordinance

Dear San Jose City Council,

Thank you for your bold leadership on enacting change that will help San Jose reach ambitious climate goals, including becominging carbon neutral by 2030. Transportation accounts for nearly 50% of greenhouse gas emissions in San Jose so to reach this goal we must do more to promote transportation choices, walkability and affordable homes near transit.

That is why Greenbelt Alliance, TransForm, Catalyze SV, Silicon Valley Bicycle Coalition, Urban Environmentalists, SPUR, Housing Action Coalition, SV@Home, TransForm, Veggielution, the Natural Resources Defense Council (NRDC), Housing Action Coalition, and Save the Bay would like to urge you to **adopt the staff recommendation to prepare an ordinance that:**

- Removes mandatory minimum parking limits;
- Updates the City's Transportation Demand Management (TDM) requirements to apply to all projects meeting a certain size threshold;
- Develops a program for ongoing monitoring and compliance for the citywide TDM program.

San Jose has adopted an ambitious plan to be carbon neutral by 2030. It is hard to reach that when so much of the city is dedicated to the storage of vehicles: with over 1.9 million spaces here already, it is past time for major reform. In addition to helping meet climate goals, this parking and TDM ordinance will help in these ways:

- Environment: More parking means more cars on the road, which degrades the environment by increasing traffic and local air and water pollution. Parking lots are large paved areas that increase polluted stormwater runoff, negatively impacting water quality in San Jose's creeks, rivers, and the Bay. Excessive parking decreases walkability and reduces the livability of cities, taking up space that could better serve the community. San Jose is seeking to be a leader in climate action, but if the City is still subsidizing parking, it will not be able to meet its climate goals.
- Affordability: The average cost for one parking space on a surface lot is \$30,000 and for an underground parking lot is \$75,000 per parking space¹. A 2016 study found that parking requirements increase housing costs for renter households by 17 percent—even for people without a car. We could build significantly more affordable housing if parking provision were based on market demand rather than arbitrary regulation². By eliminating parking minimums, we can decrease the cost of housing built near transit corridors.
- Equity: The Transportation Demand Management (TDM) policies are a critical way to increase access to transportation and reduce the need for reliance on cars, allowing people more affordable transportation options. When the TDM package includes a VTA SmartPass it can save a two-person household nearly \$2,000 per year while supporting VTA's financial sustainability and ridership. VTA's ridership is predominantly people of color (75% in the June 2020 survey were non-white) and low and middle-income. Replacing requirements for excess parking with a program that subsidizes passes will help stabilize VTA. It will also lower the joint costs for transportation and housing for the people who need it most, helping stabilize our community. It is one of the most important actions you can take to promote social equity and economic security.

² Gabbe, C. J., & Pierce, G. (2016). Hidden Costs and Deadweight Losses: Bundled Parking and Residential Rents in the Metropolitan United States. Housing Policy Debate, 27(2), 217–229. https://doi.org/10.1080/10511482.2016.1205647

Your council has been a climate leader and we hope that you continue to take bold action to reduce greenhouse gas emissions and increase housing affordability. San Jose's groundbreaking laws to require all-electric energy in new construction and EV charging stations at residential buildings will still not get us to our climate goals if we continue to incentivize driving by requiring excess parking.

San Jose has an opportunity to re-envision how to plan for and accommodate new development in a growing city and to base car storage on market demand, not outdated parking mandates. We urge you to think of our climate and housing crises and vote in support of this comprehensive ordinance.

Tackling the combined crises of housing affordability, inequality, and climate change in all their complexity requires structural and cultural change. An important piece of the puzzle is to modernize legacy policies that prevent cities from building more equitable, affordable, and sustainable communities.

The City of San Jose has adopted an ambitious plan to become carbon neutral by 2030 but with 50% of greenhouse gas emissions coming from private vehicles in the City, updating parking standards as well as new transportation demand management (TDM) requirements needs to be a clear part of this plan citywide.

I want a San Jose that is:

- More affordable: by reducing the overbearing costs of producing parking—which is passed on to residents—and, in turn, having more land and resources to make housing more affordable to residents.

- More sustainable: by allowing the community to determine how much parking is appropriate, you can prevent the oversupply of parking and promote a better quality urban environment. This policy reform can reduce reliance on cars and mitigate greenhouse gas emissions and pollution, while also incentivizing more sustainable modes and options of mobility.

- More equitable: minimum parking requirements mean that even car-free households end up paying for parking they don't use and end up driving up housing costs. The Transportation Demand Management (TDM) policies are a critical way to increase access to transportation and reduce the reliance on cars, allowing people to have more affordable transportation options.

San Jose has been a climate leader and I hope you continue to lead in this direction by taking bold action to disincentivize single-occupancy car trips, reduce GHG emissions, and increase

affordable housing. The laws you have put in place requiring all-electric energy in new construction, and electric vehicle charging stations at residential buildings might not have the intended impact if the legislation is still incentivizing driving through the requirement of minimum parking. I am counting on you to vote in support of this policy!

Sincerely,

Allan Campbell

Stephen Ragole < Sat 6/11/2022 9:12 PM To: City Clerk <city.clerk@sanjoseca.gov>

[External Email]

City Clerk Toni Taber,

Dear San Jose Councilmembers,

I am a resident of San Jose from the wonderful District 3 (near Japantown). I am reaching out to you in advance of City Council meeting next week about the parking standards and transportation management ordinance.

My partner and I are a single car household. I'd love for that to be the last car we ever buy, as we've replaced a good deal of trips with walking or biking to nearby stores, restaurants, etc. I want my family to live in a sustainable, affordable city, and so, I urge you to adopt the staff recommendation to prepare an ordinance that removes mandatory minimum parking limits.

The world faces a climate crisis, and when only 12% of new cars purchased in California are Zero-Emission, there is no way for us to meet our ambitious climate goals without reducing the use of private vehicles. Half of our greenhouse gas emissions come from private vehicles so we need to be aggressively pursuing any policy that can reduce them. Ending parking minimums is a great step in this direction.

Additionally, by mandating parking minimums, we artificially increase the price of everything, from residential rent, to the price of a cup of coffee since the rent needs to pay for the parking as well. By allowing people to determine how much parking is needed (and how much it is worth to them) we can create a more affordable, sustainable, and equitable city.

If we want to continue to be a leader when it comes to dealing with climate change, we need your support.

Sincerely, Steve Ragole

Honorable Mayor and City Councilmembers:

Alum Rock Urban Village Advocates (ARUVA) does not support the policy being proposed in 10.3 - Parking/Transportation Demand Management (TDM) Ordinance Update.

It is a known fact that the Eastside suffers from an overabundance of cars parking on our streets (attachment included - a sampling of photos representative of our streets). The lack of affordable housing has forced people into crowded conditions and the extra vehicles are clearly visible on our streets. Many in our working families are employed in jobs that require the use of vehicles, like construction workers, plumbers, maintenance workers, and gardeners, who must haul their equipment to and from their jobs.

More affordable housing for our local residents with sufficient parking is one of the solutions to this issue. An adequate mass transit system that actually takes our workers to their jobs may be part of the solution (which we do not have), but it is also not a solution for those who rely on their vehicles for their livelihood.

To say this TDM policy is a solution to the lack of affordable housing is disingenuous. The 2017 Senate Bill 36 already removes parking requirements for affordable housing built by transit corridors. Our community has yet to see the parking effects of SB35 developments on our community, but we are bracing for it.

Our community is in a never-ending cycle of proposed policies that continually sucker punches us without ever providing a cohesive solution to our needs. Our community may advocate for and receive affordable housing developments but the lack of a neighborhood preference policy means the units do not go to our local residents, so our overcrowding continues. There are plans to direct affordable housing funds to other parts of the City because other neighborhoods

are deemed more resource rich and safe, so our overcrowding will continue. First, we need a local neighborhood preference, we need affordable housing WITH parking more than 1/2 car space for each unit. We need an adequate mass transit system that meets our needs, goes to our work locations, actually goes through our community and has key stops requested by the community.

ARUVA did have City Planning provide an informational presentation on the proposed Parking/TDM policy but it was not a robust discussion where we indicated any agreement to this policy. Some of our members attended follow-up workshops where they conveyed our disagreement with the policy. In addition, many neighborhood groups are indicating they were not contacted.

To remove required parking requirements for all new developments (excluding single family homes) and leaving it to developers to determine, indicates the City has abdicated their responsibility to provide for the real needs of our communities.

In community,

Alum Rock Urban Village Advocates <u>http://aruva.org</u>email:

RE: 6/14 City Council Item 10.3 Adopting a Comprehensive Parking Policy and TDM Ordinance

Dear San Jose City Council,

Thank you for your bold leadership on enacting change that will help San Jose reach ambitious climate goals, including becominging carbon neutral by 2030. Transportation accounts for nearly 50% of greenhouse gas emissions in San Jose so to reach this goal we must do more to promote transportation choices, walkability and affordable homes near transit.

That is why Greenbelt Alliance, TransForm, Catalyze SV, Silicon Valley Bicycle Coalition, Urban Environmentalists, SPUR, Housing Action Coalition, SV@Home, TransForm, Veggielution, the Natural Resources Defense Council (NRDC), Housing Action Coalition, and Save the Bay would like to urge you to **adopt the staff recommendation to prepare an ordinance that:**

- Removes mandatory minimum parking limits;
- Updates the City's Transportation Demand Management (TDM) requirements to apply to all projects meeting a certain size threshold;
- Develops a program for ongoing monitoring and compliance for the citywide TDM program.

San Jose has adopted an ambitious plan to be carbon neutral by 2030. It is hard to reach that when so much of the city is dedicated to the storage of vehicles: with over 1.9 million spaces here already, it is past time for major reform. In addition to helping meet climate goals, this parking and TDM ordinance will help in these ways:

- Environment: More parking means more cars on the road, which degrades the environment by increasing traffic and local air and water pollution. Parking lots are large paved areas that increase polluted stormwater runoff, negatively impacting water quality in San Jose's creeks, rivers, and the Bay. Excessive parking decreases walkability and reduces the livability of cities, taking up space that could better serve the community. San Jose is seeking to be a leader in climate action, but if the City is still subsidizing parking, it will not be able to meet its climate goals.
- Affordability: The average cost for one parking space on a surface lot is \$30,000 and for an underground parking lot is \$75,000 per parking space¹. A 2016 study found that parking requirements increase housing costs for renter households by 17 percent—even for people without a car. We could build significantly more affordable housing if parking provision were based on market demand rather than arbitrary regulation². By eliminating parking minimums, we can decrease the cost of housing built near transit corridors.
- Equity: The Transportation Demand Management (TDM) policies are a critical way to increase access to transportation and reduce the need for reliance on cars, allowing people more affordable transportation options. When the TDM package includes a VTA SmartPass it can save a two-person household nearly \$2,000 per year while supporting VTA's financial sustainability and ridership. VTA's ridership is predominantly people of color (75% in the June 2020 survey were non-white) and low and middle-income. Replacing requirements for excess parking with a program that subsidizes passes will help stabilize VTA. It will also lower the joint costs for transportation and housing for the people who need it most, helping stabilize our community. It is one of the most important actions you can take to promote social equity and economic security.

Your council has been a climate leader and we hope that you continue to take bold action to reduce greenhouse gas emissions and increase housing affordability. San Jose's groundbreaking laws to require all-electric energy in new construction and EV charging stations at residential buildings will still not get us to our climate goals if we continue to incentivize driving by requiring excess parking.

San Jose has an opportunity to re-envision how to plan for and accommodate new development in a growing city and to base car storage on market demand, not outdated parking mandates. We urge you to think of our climate and housing crises and vote in support of this comprehensive ordinance.

Tackling the combined crises of housing affordability, inequality, and climate change in all their complexity requires structural and cultural change. An important piece of the puzzle is to modernize legacy policies that prevent cities from building more equitable, affordable, and sustainable communities.

June 14th City Council meeting - Climate Policy

[External Email]

As a member of the Silicon Valley Chapter of Climate Reality, I strongly support the three policies that will be discussed at tomorrow's meeting.

1. The Framework for Existing Building Electrification provides a path to the elimination of fossil fuels as energy sources and to provide access for historically marginalized communities.

2. The Pathway to Carbon Neutrality is an essential step in reducing emissions of carbon dioxide and other greenhouse gases.

3. The Transportation Demand Management and Parking Ordinance is a necessary measure to encourage the use of public transportation and to reduce automobile traffic in the city.

I urge the council to adopt these policies,

Sincerely,

Campbell Scott

Bryan Shin < Mon 6/13/2022 1:39 PM To: City Clerk <city.clerk@sanjoseca.gov>

[External Email]

City Clerk Toni Taber,

Dear San Jose Councilmembers,

I am a resident of San Jose and I am reaching out to you today, in advance of the upcoming Planning Commission and City Council meetings in June, about the parking standards and transportation demand management ordinance.

I urge you to adopt the staff recommendation to prepare an ordinance that removes mandatory minimum parking limits, updates the City's Transportation Demand Management (TDM) requirements to apply to all projects meeting a certain size threshold, and develops a program for ongoing monitoring and compliance for the citywide TDM program.

The City of San Jose has adopted an ambitious plan to become carbon neutral by 2030 but with 50% of greenhouse gas emissions coming from private vehicles in the City, updating parking standards as well as new transportation demand management (TDM) requirements needs to be a clear part of this plan citywide.

I want a San Jose that is:

- More affordable: by reducing the overbearing costs of producing parking—which is passed on to residents—and, in turn, having more land and resources to make housing more affordable to residents.

- More sustainable: by allowing the community to determine how much parking is appropriate, you can prevent the oversupply of parking and promote a better quality urban environment. This policy reform can reduce reliance on cars and mitigate greenhouse gas emissions and pollution, while also incentivizing more sustainable modes and options of mobility.

- More equitable: minimum parking requirements mean that even car-free households end up paying for parking they don't use and end up driving up housing costs. The Transportation Demand Management (TDM) policies are a critical way to increase access to transportation and reduce the reliance on cars, allowing people to have more affordable transportation options.

San Jose has been a climate leader and I hope you continue to lead in this direction by taking bold action to disincentivize single-occupancy car trips, reduce GHG emissions, and increase

affordable housing. The laws you have put in place requiring all-electric energy in new construction, and electric vehicle charging stations at residential buildings might not have the intended impact if the legislation is still incentivizing driving through the requirement of minimum parking. I am counting on you to vote in support of this policy!

Sincerely,

Bryan Shin

The Transportation Demand Management (TDM) policies are a critical way to increase access to transportation and reduce the reliance on cars, allowing people to have more affordable transportation options.

San Jose has been a climate leader and I hope you continue to lead in this direction by taking bold action to disincentivize single-occupancy car trips, reduce GHG emissions, and increase affordable housing. The laws you have put in place requiring all-electric energy in new construction, and electric vehicle charging stations at residential buildings might not have the intended impact if the legislation is still incentivizing driving through the requirement of minimum parking. I am counting on you to vote in support of this policy!

Sincerely,

Michael Hazelton

Subject: Approve San Jose's Parking and TDM Policy in June

[External Email]

City Clerk Toni Taber,

Dear San Jose Councilmembers,

I am a resident of San Jose and I am reaching out to you today, in advance of the upcoming Planning Commission and City Council meetings in June, about the parking standards and transportation demand management ordinance.

I urge you to adopt the staff recommendation to prepare an ordinance that removes mandatory minimum parking limits, updates the City's Transportation Demand Management (TDM) requirements to apply to all projects meeting a certain size threshold, and develops a program for ongoing monitoring and compliance for the citywide TDM program.

The City of San Jose has adopted an ambitious plan to become carbon neutral by 2030 but with 50% of greenhouse gas emissions coming from private vehicles in the City, updating parking standards as well as new transportation demand management (TDM) requirements needs to be a clear part of this plan citywide.

I want a San Jose that is:

- More affordable: by reducing the overbearing costs of producing parking—which is passed on to residents—and, in turn, having more land and resources to make housing more affordable to residents.

- More sustainable: by allowing the community to determine how much parking is appropriate, you can prevent the oversupply of parking and promote a better quality urban environment. This policy reform can reduce reliance on cars and mitigate greenhouse gas emissions and pollution, while also incentivizing more sustainable modes and options of mobility.

- More equitable: minimum parking requirements mean that even car-free households end up paying for parking they don't use and end up driving up housing costs. The Transportation Demand Management (TDM) policies are a critical way to increase access to transportation and reduce the reliance on cars, allowing people to have more affordable transportation options.

San Jose has been a climate leader and I hope you continue to lead in this direction by taking bold action to disincentivize single-occupancy car trips, reduce GHG emissions, and increase affordable housing. The laws you have put in place requiring all-electric energy in new construction, and electric vehicle charging stations at residential buildings might not have the intended impact if the legislation is still incentivizing driving through the requirement of minimum parking. I am counting on you to vote in support of this policy!

Sincerely,

Leo Buckley
