# City of San Jose Sexual Assault Analysis 

Dr. Michael Smith<br>Dr. Rob Tillyer<br>University of Texas at San Antonio

November 12, 2019
USA. Department of Criminology \& Criminal Justice

## Data \& Methodology

- Three sources of data were shared:

1. 2010-Jun. 2012
2. Jul.-Dec. 2012
3. 2013-2018

- Variables were created that measured:
- Victim characteristics (Age, Gender, Race/Ethnicity)
- Offender/Suspect characteristics (Age, Gender, Race/Ethnicity)
- Incident characteristics (Date, Time, Day of the Week, Organizational Location, Location Type, Type of Offense, Weapon Type, Relationship of Offender/Suspect to Victim)

## Data \& Methodology

Important Considerations:

1. Change in sexual assault definition

- Officially changed in 2013
- Implemented by SJPD in 2015

2. Not all variables were available for all time periods
3. All time related variables were measured using the occurred date and time, while the categorization of the event was based on when it was reported.
