Dear community of San Jose, and city govt.,

I missed, the Downtown West study session yesterday.

After listening to it, on YouTube last night, To offer my own, public comment, at this time. It is about, 1min. 30 seconds -

Please continue to listen, to the ideas, guidance, and advice, of the airport commission, about lower, more practical, building heights, and other development questions.

They also may have, some good thinking, with the current issues, of crane heights & use.

How can union groups, like Liuna, and homeless advocacy, have a more open role, in the SAAG public meeting process.

As it has been my understanding, that converting the SAP Center, for the future, of Diridon Station needs - has always been able to offer, something like, a new Shark's arena, built around Spartan stadium, or the Avaya stadium area.

And to conclude, Google and its current supplying, of much national security technology, at the border, is actually defining, the future of this country's border walls.

There is simply, a lot to balance, with the entire San Jose downtown project.

As this particular project, is called Downtown West, I hope we can always be considering and including, East San Jose's part.

As it simply, should be,
a part, of the future purpose of Google, in San Jose, to ask East San Jose, among other things,

How to bring, inventive, decent minded, human and civil rights ideas, to the more cold, exact, border walls & rules, of technology, surveillance, data collection, cyberspace, and it's economic development.

Sincerely,
Blair Beekman
