[External Email]

Dear community of san jose, and city govt.,

It is again, being asked, the same as last week, to approve, many Smart City, Transportation & Environment, and Rules and Open government meetings minutes, in consent calendar item 2.3.

To again, try to summarize, this weeks committee meeting minutes - I think, it is meant to remind ourselves, and offer - that new 4G & 5G, is being placed, in local sj neighborhoods.

These are the efforts, in years of developing, how to help bridge, the digital divide.

The additional, 4g & 5g uses, of surveillance & data collection technology, are also meant to help with, neighborhood safety issues, and Vision Zero ideas, at this time.

For the everyday public, to make sure telecomms & local govt, are following, good open policies and practices - can make for, an important addition, in how to address the questions, in bridging the digital divide, for a community.

And how to better address, positive community harmony & sustainability, and empowerment - now, in the future, and in these difficult, few years, of Covid-19.

As everyday community, please don't be afraid, to work with others, if new 4g&5g placement, feels unhealthy or uncomfortable, in your local neighborhood.

Local San Jose govt, should want to listen, if asked in decent terms.

sincerely,
blair beekman
