Dear community of San Jose, and local govt.,

A few additional items, I also wanted to mention, at last week's special meeting.

The first Covid-19 vaccines, from early last fall, were aerosol vaccines.

Can it begin to be, more openly talked about, if the new, more portable, HVAC systems, to be placed in public schools, at this time, will have this aerosol vaccine capability ?

From this, I also feel, there should be, a non-pressured system, for kids to attend school, 2.5 hours a day, twice a week. With continued, in-home learning,

Or perhaps, for 2 hours, three times a week. And gradually, expand hours, from there.

I feel this can be, a sensitive, beginning approach, that can possibly offer something, to all sides.

Sincerely,
Blair Beekman

Dear community of San Jose, and city govt.,

To try once again, to summarize, some of my ideas & feelings, from the special city council meeting on covid -19, last week.

As I stated, at last weeks meeting - as the work began, of positive sustainability, equity, human rights & accountability, long before the arrival of Covid-19.

Maybe, there is a way, to have important public study sessions, around items of equity & reimagine, in the future, to simply not use Covid-19, as its public meeting title.

Yet it seems, there is a balance, all parts of the community, may need to re-learn, from the study session.

As the ideas of equity, positive sustainability, and now survival, is simply the language, often used, in current local govt. efforts, as Covid-19 continues.

These are all, honest, decent efforts, towards good community practices.

I hope, as a community, we can begin, to more actively consider the term, positive sustainability.

And begin, to more openly address, large scale, social planning, that does not have to include, the harming of mass numbers of people, in order to reach, important ideals & goals, for the future, of our human society.

Sincerely,
Blair Beekman
