1 OVERVIEW OF STUDY

The City of San José (City) contracts with two haulers for the collection and processing of source-separated recyclable materials from residential properties. California Waste Solutions (CWS) transports collected single-family dwelling (SFD) recyclable materials from Districts A and C to their Material Recovery Facility (MRF) for processing. GreenTeam transports collected SFD recyclable materials from District B to the GreenWaste MRF for processing.

The City contracted with SCS Engineers (SCS) to provide material characterization of curbside recyclable materials. The overall objective of the service is to determine the percentage by weight of 'Program Materials', which is referred to in this study as Residential Recyclables for Studies (RRFS), collected by the City's contracted recycling haulers. The City will use this information to compensate its two recycling haulers for processing the collected recyclable material according to the percentage of Program Materials (RRFS) and non-Program Materials (Non-RRFS) per their Agreements. This document describes the field procedures for the characterizing inbound residential curbside collected recyclables from SFD residences in the City and presents a summary of results.

SCS conducted this curbside audit as required by San José's residential recycling Agreements. Per the hauler Agreements, and the City's 2019 Agreement with SCS for consultant services, this study was scheduled to occur in 2020 and happened to land several months into a global pandemic. While the extent of the true impacts due to the pandemic and Santa Clara County's shelter-in-place order are unclear, San José's residential program saw increases within the residential waste stream in 2020 when compared to the same time in 2019. For example, there was an increase of 8% to their SFD garbage waste stream, an increase of 17% to their SFD recycling waste stream, and an increase of 33% to their SFD recycling residue tonnage from April to December 2020 as compared to April to December 2019. This information indicates that the results of this study are likely significantly impacted by the COVID-19 pandemic and stay-at-home orders. The increase in Non-RRFS could possibly be due to more residents working from home and generating more garbage, as well as schools being closed and students transitioned to remote learning from home.

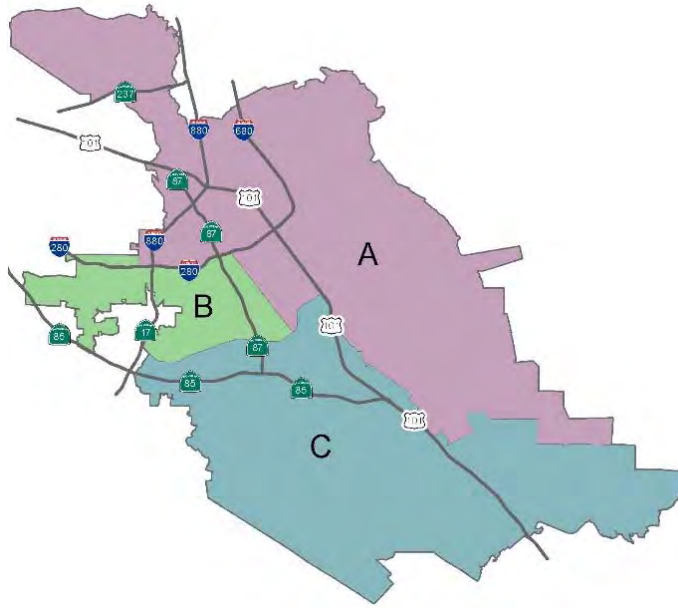

SCS completed a similar recycling characterization study in 2020 for a nearby jurisdiction shortly before this study and saw significantly more recycling contamination as compared to 2019 levels.

2 CHARACTERIZATION METHODS

DESCRIPTION OF EXISTING SYSTEM

The City of San José provides garbage and recycling services to 214,000 SFDs and 109,000 multi-family dwellings (3,400 complexes). Residential recycling services are divided between two haulers in three Collection Districts A, B, C shown in Exhibit 1.

Exhibit 1. Recycling Collection Districts

CWS collects and processes recyclables from 77 percent of the City's SFDs in Districts A and C. GreenTeam collects recyclables from 23 percent of the City's SFDs in District B as well as all of the City's multi-family dwellings and delivers the material to the GreenWaste MRF for processing. The CWS MRF is dedicated exclusively to San José residential material. The GreenWaste MRF processes recyclables from the City as well as other materials delivered from multiple jurisdictions in the region.

SAMPLING PROCESS

The study period consisted of five weeks of field sampling in a seven-week period between Monday, September 28, 2020 and Monday, November 16, 2020. The number of samples corresponded to the proportion of recyclables collected by collection District and the number of collection routes.

Exhibit 2 details the number of residential curbside recycling collection routes per day for each of the collection Districts. SCS originally planned to acquire one 150-pound sample from all 47 daily SFD collection routes (235 total samples) in Districts A, B, and C. However, health and safety precautions due to a coronavirus outbreak at the CWS MRF prevented SCS from collecting 22 samples from 22 CWS Wednesday, Thursday and Friday collection day routes, as planned. CWS suggested, and SCS agreed, that these samples were not needed to maintain the integrity of the study. Exhibit 2 presents the planned and actual number of samples acquired and sorted for this study. Overall, 90 percent of 235 weekly collection routes were sampled.

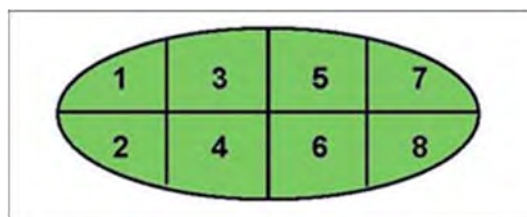

Exhibit 2. Number of Samples by Collection District

District	Average Number of Routes per Day	Number of Samples		Percent of Routes Sampled
		Planned	Actual	
A	22	110	102 ^A	91%
B	9	45	46 ^B	98%
C	16	80	68 ^C	85%
Total	47	235	216	90%

Note: A – 100 of 110 weekly routes were sampled, two routes were sampled twice
B – 44 of 45 weekly routes were sampled, two routes were sampled twice
C – 68 of 80 weekly routes were sampled.

SCS worked with each MRF to acquire a random sample from each of the 47 daily recycling collection routes. Each targeted load was visually separated into approximately eight subsections seen in Exhibit 3 below. SCS staff directed a loader (operated by MRF personnel) to grab a sample from a randomly selected subsection and deliver it to the sorting crew. Samples were weighed before sorting activities to confirm an appropriate sample size of approximately 150 pounds.

Exhibit 3. Plan View Showing "Cells" of Pile

MANUAL SORTING PROCESS

Each sample was placed on a sorting table and separated by hand into the material types in Exhibit 4. Separated materials were accumulated in containers dedicated to individual material types. Materials less than three inches (in all dimensions) were classified as Other.

Exhibit 4. Residential Recyclables For Studies (RRFS)

Material Type	RRFS Materials	Non-RRFS
Paper	Clean Newspaper	Contaminated Paper & Remainder/Composite Paper
	Clean OCC	
	Clean Mixed Paper	
	Clean Aseptic & Poly-coated	
	NOTE: Clean recyclable paper is defined as material not soiled or contaminated that could reasonably be expected to be recycled without special processing or cleaning.	
Plastic	#1 PET Bottles & Containers	Remainder/Composite Plastic (includes opaque plastic film)
	#2 HDPE Bottles & Containers	
	#3, #4, #5, #7 Bottles & Containers	
	Clear/Clean Plastic Bags & Other Film	
	Durable Plastic Items	
Metal	Aluminum Beverage Cans	Remainder/Composite Metal
	Aluminum Foil	
	Steel (Tin) Cans	
	Other Scrap Metal	
Glass	Recyclable Glass	Remainder/Composite Glass
Textiles	NA	Bagged and Loose Textiles
Organic	NA	Organics
Medical	NA	Medical (includes sharps & personal hygiene products)
Electronic	NA	Electronics
HHW & Special Waste	NA	HHW & Special Waste (includes chemicals, motor oil, oil filters, mercury lamps, batteries, tanks)
Other	NA	Other Materials including polystyrene

Food Contamination

Recyclable materials with significant food contamination, i.e., where the weight of the contamination is greater than the weight of the recyclable material itself, were placed in the “Other” Non-Residential Recyclables for Study (Non-RRFS) classification. For example, a #1 PET Container that had significant food, such as peanut butter or mayonnaise inside it, was categorized as “Other”. Similarly, a tin can with significant quantities of food like tuna, where the weight of the tuna was more than the weight of the empty tin can, was also categorized as “Other”. Containers with liquid such as a #1 PET bottle half filled with soda, where the weight of the liquid exceeds the weight of the bottle, were placed in the “Other” classification without emptying the liquid.

Fiber that was wet, soiled or so dirty that it could not be included in a commodity bale was placed in the “Contaminated & Remainder/Composite Paper” Non-RRFS classification.

Fines

Materials three inches or less (in all dimensions) were placed into the “Other” Non-RRFS classification. This included commingled materials all under three inches that are mixed together such as, for example, plastic bottle caps, broken glass, and paper clips.

Bagged Materials

Bagged materials were emptied and the contents sorted into the appropriate material classification types, with the exception of bagged shredded paper. Bagged shredded paper was not unbagged before being placed into the Clean Mixed Paper category.

Weighing

For each sample, the Sorting Supervisor reviewed the sorted material for homogeneity and quality control before the containers were weighed using a pre-calibrated scale, and recorded the weight for each sorted material category on a sampling form.

After the entire sample had been sorted, weighed, and recorded, the sorted materials were aggregated for disposal by CWS or GreenWaste and the sorting area swept clean.

3 SUMMARY OF RESULTS

CITYWIDE

The study period consisted of five weeks of field sampling in a seven-week period between Monday, September 28, 2020 and Monday, November 16, 2020. On average, the proportion of RRFS materials in residential curbside collected recyclables is **49.0 percent**, as shown below in Exhibit 5. Paper represents the greatest portion of RRFS materials at 29.2 percent, with Clean OCC (Cardboard) comprising just over half of fiber at 15.9 percent. Clean Mixed Paper comprised the second largest component of RRFS at 10.7 percent. Aluminum Foil and Clean/Clear Plastic Bags and Other Film comprised the least amount of RRFS at 0.1 and 0.2 percent, respectively.

Exhibit 5. Summary of Residential Curbside Collected Recyclables - Citywide

Material Type			Mean Composition		
Residential Recyclables For Studies (RRFS)	Paper	Clean Newspaper	1.8%	29.2%	49.0%
		Clean OCC (Cardboard)	15.9%		
		Clean Mixed Paper	10.7%		
		Clean Aseptic & Poly-Coated Packaging	0.7%		
	Plastic	#1 PET Bottles and Containers	2.9%	7.3%	
		#2 HDPE Bottles and Containers	1.9%		
		#3, #4, #5, #7 Bottles and Containers	1.2%		
		Clean/Clear Plastic Bags and Other Film	0.2%		
		Durable Plastic Items	1.1%		
	Metal	Aluminum Beverage Cans	0.7%	3.5%	
		Aluminum Foil	0.1%		
		Steel (Tin) Cans	1.2%		
		Other Scrap Metal	1.6%		
Glass	Recyclable Glass	9.0%	9.0%		
NON- Residential Recyclables For Studies (NON RRFS)	Contaminated Paper & Remainder / Composite Paper		13.2%	13.2%	51.0%
	Remainder / Composite Plastic		1.5%	1.5%	
	Remainder/Composite Metal		2.3%	2.3%	
	Remainder/Composite Glass		0.3%	0.3%	
	Textiles		1.8%	1.8%

	Other Materials		23.9%	23.9%	
	Total			100.0%	100.0%

Note: Composition based on 216 samples.

Exhibit 6 presents the average composition of residential curbside collected recyclables collected citywide graphically.

Exhibit 6. Characterization of Residential Curbside Collected Recyclables - Citywide

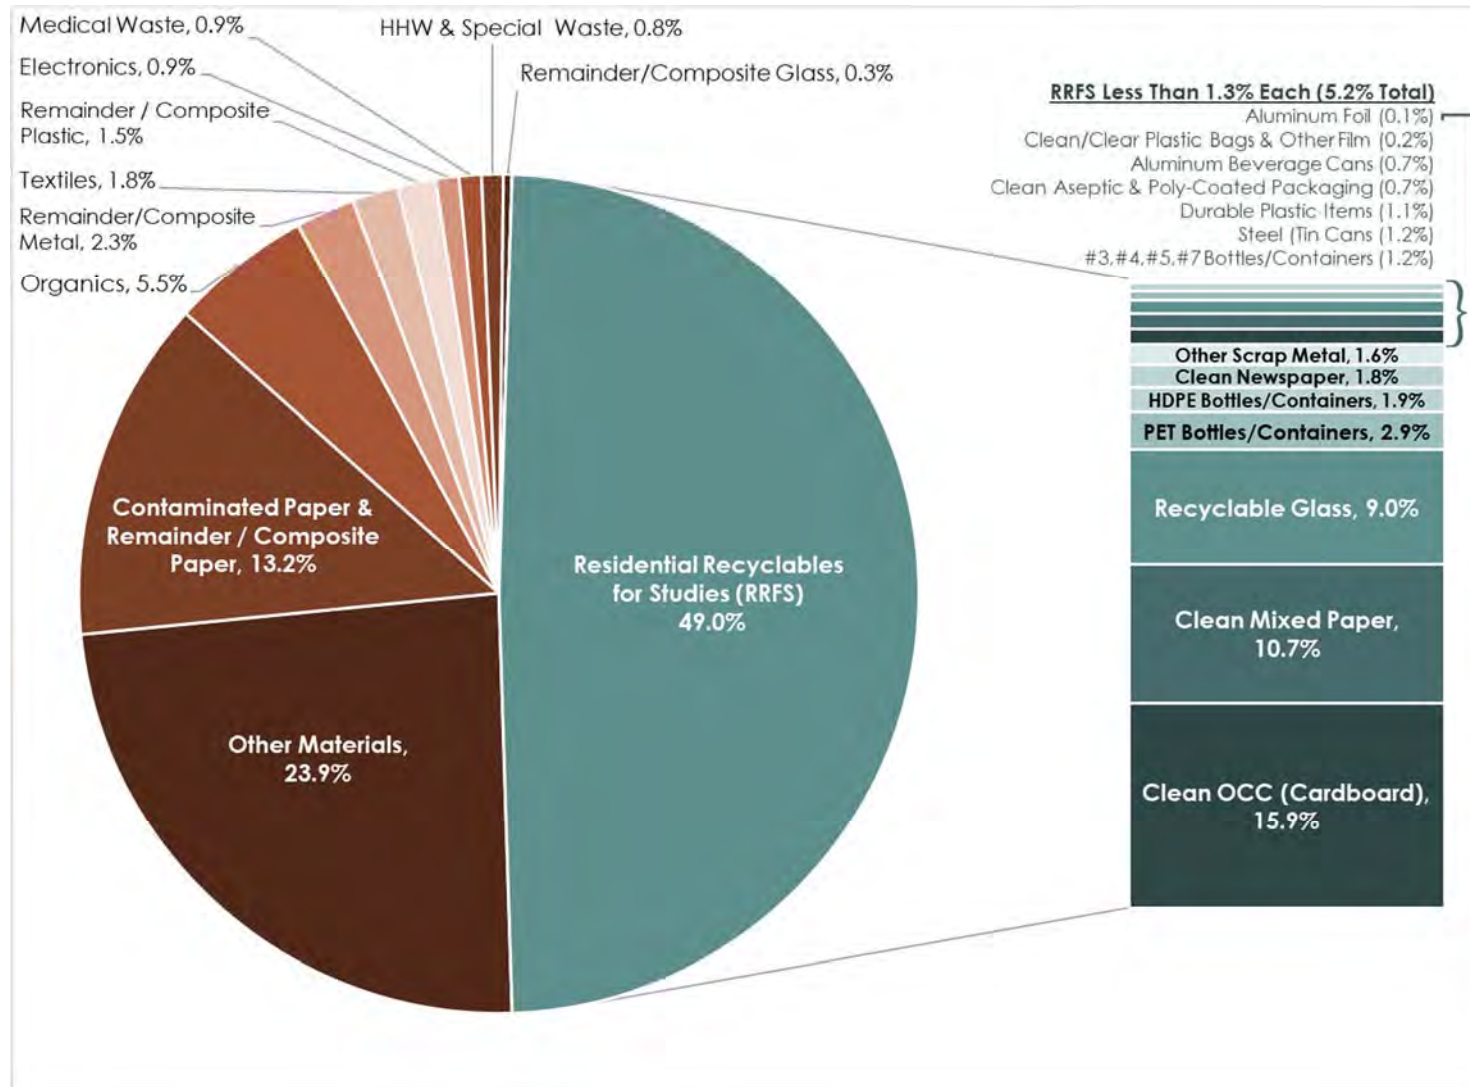

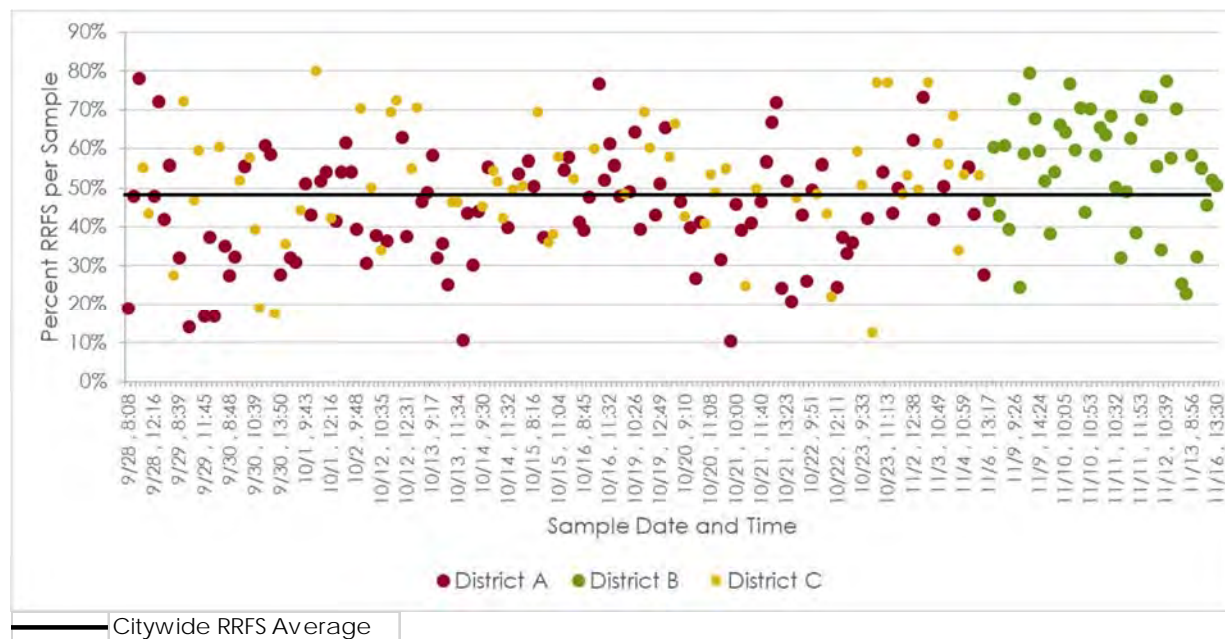

Exhibit 7 presents the proportion of RRFS materials for each of the 216 samples acquired during the study. The samples are in sequential order. The portion of RRFS in the 216 samples ranged from a minimum of 10.6 percent to a maximum of 80.1 percent.

Exhibit 7. Proportion of RRFS Materials by Sample

BY COLLECTION DISTRICT

Exhibit 8 presents the composition of residential curbside collected recyclables by collection District. The proportion of major RRFS classifications and Non-RRFS materials are presented by collection District graphically in Exhibit 9. Collection District A had the lowest proportion of all major recyclable classifications (recyclable paper, recyclable plastic, recyclable metal, and recyclable glass) and the highest proportion of Non-RRFS materials at 55.5 percent.

Exhibit 9. Proportion of Major RRFS Classifications and Non RRFS Materials by Collection District

BY COLLECTION DAY

Exhibits 10, 11, and 12 present the composition of residential curbside collected recyclables by collection District and by collection day. While collecting samples from Collection Districts A and C over the four-week timeframe at CWS, SCS observed that Tuesday and Thursday routes consistently were the dirtiest and wettest days. Collection vehicles frequently had a difficult time emptying loads due to the density of compacted wet material. Loads on these days frequently had large quantities of food and yard waste. Monday and Friday routes were frequently the cleanest days of the week with large amounts of recyclable material.

The proportion of major RRFS classifications and Non-RRFS materials are presented by collection District graphically in Exhibits 13, 14, and 15. Exhibit 13 confirms field observations regarding dirty and wet recyclables on Tuesdays and Thursdays as the proportion of Non-RRFS materials is 66.4 and 58.9 percent, respectively. Non-RRFS materials represent between 48.7 and 52.7 percent of incoming recyclables on Mondays, Wednesdays, and Fridays.

For Collection District B, there does not appear to be a significant increase in the proportion of Non-RRFS materials for a particular collection day; however, Exhibit 14 shows that the proportion of Recyclable Paper is lowest on Thursdays (22.8 percent on Thursdays versus between 32.6 and 33.7 percent on other collection days). Conversely, the proportion of Recyclable Metal and Recyclable Glass are highest on Thursdays (Recyclable Metal and Recyclable Glass are 6.2 and 17.3 percent, respectively on Thursdays but between 2.8 – 4.5 percent and 10.8 – 12.8 percent, respectively on other collection days).

For Collection District C, Exhibit 15 presents lower proportions of Recyclable Paper and higher proportions of Non-RRFS materials on Wednesdays (56.4 percent on Wednesday versus between 41.8 and 51.5 percent on other collection days).

**Exhibit 10. Summary of Residential Curbside Collected Recyclables by Collection Day:

Appendix B

Definition of Material Types

Residential Recyclables For Studies (RRFS)

Paper

Clean Newspaper means paper used in newspapers. Examples include newspaper and glossy inserts, and all items made from newsprint, such as free advertising guides, election guides, plain news packing paper, stapled college schedules of classes, and tax instruction booklets. These materials are clean enough to be included in a commodity bale.

Clean OCC means unwaxed corrugated cardboard containers/boxes. This type does not include pizza boxes. These materials are clean enough to be included in a commodity bale.

Clean Mixed Paper means other types of recyclable papers. Examples include books (paperback), carbonless paper, catalogs, cereal and cracker boxes, colored paper, computer paper, construction paper, coupons, egg cartons, envelopes, gift wrap, junk mail, magazines, paper bags, shoe boxes, shopping bags, bags of shredded paper, telephone books, and white office paper. These materials are clean enough to be included in a commodity bale.

Clean Aseptic and Poly-coated Packaging means multi-layer paper packing designed to keep food and other putrescible contents fresh. Includes items like soy-milk containers, paper gable top containers, and paper soup cartons. These materials are clean enough to be included in a commodity bale.

Plastic

#1 PET Bottles and Containers means clear or colored PET containers. When marked for identification, it bears the number "1" in the center of the triangular recycling symbol and may also bear the letters "PETE" or "PET." The color is usually transparent green or clear. A PET container usually has a small dot left from the manufacturing process, not a seam. It does not turn white when bent. Examples include plastic soda, water, or juice bottles, dairy tubs, clamshell containers (both clear and non-clear), and salsa tubs.

#2 HDPE Bottles and Containers means natural and colored HDPE containers. This plastic is usually either cloudy white, allowing light to pass through it (natural) or a solid color, preventing light from passing through it (colored). When marked for identification, it bears the number "2" in the triangular recycling symbol and may also bear the letters "HDPE." Examples include milk jugs, water jugs, detergent bottles, some hair-care bottles, empty motor oil, empty antifreeze, and other empty vehicle and equipment fluid containers marked with the number "2".

#3, #4, #5 & #7 Bottles and Containers means plastic containers made of types of plastic other than HDPE, PET, or polystyrene. When marked for identification, these items may bear the number "3", "4", "5", or "7" in the triangular recycling symbol. This subtype also includes unmarked plastic bottles

and containers. Examples include baby wipe containers, flower pots, food containers, household cleaner bottles, prescription bottles, and shampoo bottles.

Clear/Clean Plastic Bags and Other Film means clear flexible plastic sheeting, uncontaminated with food or garbage residue. It is made from a variety of plastic resins including HDPE and LDPE. It can be easily contoured around an object by hand pressure. Examples include dry-cleaning plastic bags intended for 1-time use, newspaper bags, produce bags, and film plastic used for large-scale packaging or transport packaging such as shrink-wrap, mattress bags, furniture wrap, and film bubble wrap. This type does not include garbage bags.

Durable Plastic Items means products made entirely of plastic meant for multiple use. Examples include toys, toothbrushes, vinyl hose, milk crates, plastic pallets, eating utensils, plastic lawn furniture, fiberglass products, and foam carpet padding.

Metal

Aluminum Beverage Cans means any food or beverage container that is made mainly of aluminum. Examples include most aluminum soda or beer cans.

Aluminum Foil means any thin non-ferrous metal item that is formable using hand pressure.

Steel (Tin) Cans means rigid containers made mainly of steel. These items will stick to a magnet and may be tin-coated. This subtype is used to store food, beverages, paint, and a variety of other household and consumer products. Examples include canned food and beverage containers, pet food cans, empty metal paint cans, empty spray paint and other aerosol containers, and bimetal containers with steel sides and aluminum ends.

Other Scrap Metal includes ferrous, non-ferrous, and mixed metal items, other than items described previously. These items may be made of aluminum, copper, brass, bronze, lead, zinc, iron, other metals, or a combination of metals. Examples include aluminum pie pans, aluminum furniture, appliances, small metal cast iron pans, doorknobs, metal lids and caps, pots and pans, metal. The "rule of thumb" for classifying an object in this type is that it must not fit in the recyclable metal categories described above, and metals must account for at least 80% of the object's weight.

Glass

Recyclable Glass means brown, clear, green, or colored glass bottle and jars, whole or broken, of any size. Examples include clear soda bottles, brown beer bottles, green wine bottles, mayonnaise jars, and jam jars.

Non-Residential Recyclables For Studies (Non-RRFS)

Contaminated Paper and Remainder/Composite Paper

Includes the following

- **Contaminated Newspaper** means paper used in newspapers. Examples include newspaper and glossy inserts, and all items made from newsprint, such as free advertising guides, election guides, plain news packing paper, stapled college schedules of classes, and tax instruction booklets. These materials appear to have been contaminated either through use prior to disposal or during collection and hauling. The contamination is sufficient to prevent the sale of the materials.
- **Contaminated OCC** means unwaxed corrugated cardboard containers/boxes. This type does not include pizza boxes. These materials appear to have been contaminated either through use prior to disposal or during collection and hauling. The contamination is sufficient to prevent the sale of the materials.
- **Contaminated Mixed Paper** means other types of recyclable papers. Examples include books (paperback), carbonless paper, catalogs, cereal and cracker boxes, colored paper, computer paper, construction paper, coupons, egg cartons, envelopes, gift wrap, junk mail, magazines, paper bags, shoe boxes, shopping bags, post it notes, bags of shredded paper, telephone books, and white office paper. These materials appear to have been contaminated either through use prior to disposal or during collection and hauling. The contamination is sufficient to prevent the sale of the materials.
- **Contaminated Aseptic and Poly-coated Packaging** means multi-layer paper packing designed to keep food and other putrescible contents fresh. Includes items like soy-milk containers, paper gable top containers, and paper soup cartons. These materials appear to have been contaminated either through use prior to disposal or during collection and hauling. The contamination is sufficient to prevent the sale of the materials.
- **Pizza Boxes** means cardboard boxes used to store and transport fresh (not frozen) pizzas. This includes both clean and contaminated pizza boxes, and paper pizza box inserts.
- **Remainder/Composite Paper** means items made mostly of paper that do not fit into any of the above types and may be combined with minor amounts of other materials such as wax or glues. Typically, this is paper with other materials attached in sufficient quantities that it would be considered to be contaminated by a typical MRF. Examples include three-ring binders containing paper, or plastic packaging glued to paper or cardboard, cigarette boxes, Tyvek, and paper mache.

Remainder/Composite Plastic

Plastic that cannot be put in any other type or subtype. They are usually recognized by their optical opacity. This type includes items made mostly of plastic but combined with other materials. Examples include disposable razors, pens, lighters, and plastic toys with a significant other material component.

Remainder/Composite Metal

Metal that cannot be put in any other type or subtype. This type includes items made mostly of metal but combined with other materials and items made of both ferrous metals and non-ferrous metal combined. Examples include small non- electronic appliances such as toasters and hair dryers,

motors, insulated wire, metal window blinds, and finished products that contain a mixture of metals and other materials, whose weight is derived significantly from the metal portion of its construction.

Remainder/Composite Glass

Glass that cannot be put in any other type or subtype. It includes items made mostly of glass but combined with other materials. Examples include Pyrex, Corning ware, crystal and other glass tableware, mirrors, non-fluorescent light bulbs, auto windshields, candle holders, and other glass not typically accepted by a MRF.

Textiles

Loose or bagged items made of thread, yarn, fabric, or cloth. Examples include clothes, cotton, linen, polyester, rayon, wool, fabric trimmings, draperies, carpet, and all natural and synthetic cloth fibers. This type does not include cloth-covered furniture, mattresses, leather shoes, leather bags, or leather belts. This type does not include textiles that are wet, contaminated with food, chemicals, or other substances, or that are dirty.

Organic Materials

Includes the following

- **Food Waste** means food material resulting from the processing, storage, preparation, cooking, handling, or consumption of food. Examples include discarded meat scraps, dairy products, egg shells, fruit or vegetable peels, and other food items from homes, stores, and restaurants.
- **Yard Waste** includes plant material from any public or private landscape. Examples include leaves, grass clippings, plants, prunings, shrubs, woody plant material, branches, and stumps.
- **Compostable Paper** includes paper that is considered unsuitable for recycling, due to food contamination or human contact, but that is suitable for typical composting operations. Examples include waxed cardboard, paper towels, food-contaminated paper plates, waxed paper, tissues, and other papers that were soiled with food during use (e.g., paper clamshells).

Medical Waste

Materials used in medical processes, including tubing, surgical tray liners, exam table liners, and any materials in red biohazard bags. Includes both treated and untreated medical waste. Also includes:

- **Sharps** means needles, syringes, and lancets, used or unused. BUT epi-pens which still contain undispensed medicine are medicine, and will be sorted as Other Materials (empty epi-pens are sharps). Individual sharps will be counted.

- **Personal Hygiene Products** means disposable baby diapers, adult protective undergarments, and feminine hygiene products. Includes diaper and any contents.

Electronics

Items containing a circuit board, including computers, electronic computer accessories. Also includes TVs and CRT Monitors (items containing a cathode ray tube (CRT)). Examples include televisions, CRT computer monitors, and other items containing a cathode ray tube (CRT).

HHW and Special Waste

Chemicals means pesticides, cleaning products, paint, and other chemicals hazardous to human and environmental health. Pesticides includes pesticides, insecticides, herbicides, and wood preservatives NOT packaged under pressure. Cleaning products includes consumer products intended for cleaning NOT packaged under pressure includes ammonia, bleach, “green” cleaners, waxes and polishes. Paint means latex paint, alkyd paint, oil-based paint, architectural paint, automotive and specialty (traffic marking) paint NOT packaged under pressure. Also includes:

- **Automotive Batteries** means any type of automotive battery including both dry cell and lead acid
- **Lithium Ion Batteries** means lightweight, high energy density batteries that are frequently used to power portable electronic devices (like cell phones, laptops, and digital cameras), power tools, and electric vehicles. They are often rechargeable. Batteries must be labeled as lithium ion to be included here.
- **Alkaline Batteries** includes all battery chemistries, primarily alkaline batteries, including alkaline rechargeable batteries.
- **Ni-Cad Batteries** includes all batteries, usually rechargeable, using a nickel cadmium chemistry. Batteries must be labeled as Ni-Cad to be included here.
- **Tanks** means metal containers used for storing gasses. Examples include helium, and propane tanks, aerosol cans, and fire extinguishers.
- **Tires** means vehicle tires. Examples include tires from trucks, automobiles, motorcycles, heavy equipment, and bicycles.
- **Oil Filters** means metal oil filters used in motor vehicles and other engines, which contain a residue of used oil.
- **Motor oil** means lubricating oil, either used or unused, primarily used in vehicles or internal combustion engines.
- **Mercury Lamps** means all tubes and bulbs with intentionally added mercury, includes fluorescent tubes and compact fluorescents, High Intensity Discharge (HID) bulbs, sodium vapor lamps, and neon signs. Does NOT include incandescent or halogen tubes or bulbs.

- **Other Universal Waste** means hazardous wastes that may contain mercury, lead, and other substances hazardous to human and environmental health. Examples include thermostats, mercury-containing items, discharge lamps, and mercury vapor lamps.

Other Materials

Other Materials means items not classified above. Examples of material in this type include mattresses, box springs, plastic trash bags (emptied), #6 plastic bottles and containers (rigid polystyrene), Styrofoam containers and packing material, ceramics, animal carcasses, ash, animal feces, furniture, stuffed toys, carpet padding, leather items, contaminated textiles, medicines, shingles, drywall, and other construction material. Bottles and containers with significant food contamination (where the food, liquid, or other solid exceeds the weight of the bottle/container) are included. Includes wood waste from non-yard waste sources. Examples include dimensional lumber, pallets, crates, and plywood. Includes material that is less than 3 inches in length, width, and depth.
